

Technical Release Notes April 2020

AcctMainter 6.4.108	nance.dll 05/01/2020	12003235	Improved clean up functionality to ensure database connections are only closed when appropriate.
ActiveM20.c 6.4.129 6.4.130	05/01/2020 05/05/2020	I2003290 I2001306 I2005037	Improved the summarization routine in the inventory allocation/details screen. Transaction Override adjustment status transaction combo will now be more responsive. Transaction override has been updated to prevent a situation that could cause OrderStream to close when trying to adjust a documents status.
ActivityLog. 6.4.28	.ocx 05/01/2020	I1901286	Added filtering by transaction capabilities.
AdminTools 6.4.62	s. dll 05/05/2020	I2003195	Modified the procedure that controls the logs for the authorization actions for transaction to be able to distinguish between a successful authorization and a failure.
AutoProces 6.4.5	sor.exe 05/01/2020	I1803239 I1804249	Automate Auto Config Processor to be scheduled to run in Windows Scheduler with Aspose.Net. This also includes error logging an optional error emailing when possible, and to shut down Auto Processor when there is a connection failure. Optional preferences are set in the command parameters of the executable, AutoProcessor.exe Modified Configurator auto processing to report errors via logging and optional emailing when possible and to shut down Auto Processor when there is a connection failure. Optional preferences are set in the command parameters of the executable, AutoProcessor.exe
AutoUpdate 6.4.43	r.exe 04/14/2020	l1907074	Updated to correct the error message that is displayed when an issue with detecting Outlook's Platform (32/64-bit)

Config.dll

6.4.183	05/01/2020	I1803239	Automate Auto Config Processor to be scheduled to run in Windows Scheduler with Aspose.Net.
			This also includes error logging an optional error emailing when possible, and to shut down Auto Processor when there is a connection failure. Optional preferences are set in the command parameters of the executable, AutoProcessor.exe
		l1912221	Using details only in product line maintenance has had the spacing adjusted and should no longer have overlapping elements.
		I1908296	Implemented item configuration property value search and replace functionality in Job Costing Implemented item re-configuration functionality in Job Costing
		12003030	Implemented an optional argument, KeepExistingData, in the function BuildTempFullStruc in basSpecBuilder, to bypass the deletion of existing BOM data in the temp table when the value is TRUE. This allows existing BOM data to be kept when configurator is called from .NET Configurator.
		12002207	Corrected issue the writing the incorrect Request and Arrival date fields to the configurator Input worksheet
		I2001299	Adjusted the Config Parent-Child Bill of Material logic to append the child's total excel output price to the parent's net price.
		12001017	Corrected routine to properly default configuator property values by owner when the productline is selected in the transaction module.
		11804249	Modified Configurator to report errors via logging and optional emailing when possible and to shut down Auto Processor when there is a connection failure. Optional preferences are set in the command parameters of the executable, AutoProcessor.exe
		l1909285	A new check box called "Show Quick Configurator Files" has been added to the product line Maintenance to enable or disable the files viewing functionality in Quick Configurator.
		12003208	In Product Line Maintenance, the form for Excel Property Filtering triggers setup has been modified such that the Controlling Property combo dropdown will now display the Property Name, Product Line Property Caption, and Property Description.
		12004026	Modified to eliminate a Type Mismatch error that occurred while loading the "Current Batch Errors" screen if data for the ItemSpec module is read, to ensure it can display all current batch processing issues.
6.4.184	05/04/2020	12005029	Corrected an issue introduced in the last release when specifying next operation numbers.
6.4.185	05/05/2020	12005032	Config now catches additional cases where temp tables are not removed when no longer needed, and removes them.
DataTransfe			
6.4.36	05/01/2020	I2001184 I1807282	Enhanced for internal use. Adjustment in data transfer to ensure that the UpdateActiveM scripts are properly split into the desired batches when run. Also provides more error information in certain cases. The "Manually Apply Updates" screen, available from Tools, "Open Entire Update List" now handles sxSystem databases.

DataTransfe	r.mdb		
6.4.261	05/01/2020	I2002068 I1909285	Includes the record to allow Shipping form Search launch source. A new field called QuickConfigShowFiles has been added to the Product Line table.
		I1910196	Added a new table to define the alternative bill of materials basic structure to use during the Microvellum/Cabinet Vision import. Also added a new Microvellum setting to specify when to use this alternative bill of materials basic structure.
		12004028	Updated the report query for the Physical Inventory Worksheet report.
		12004014	Altered Bank register report for Financials to suppress voided transactions
		12003232	Corrected issue with GL Inventory Posting Journal Batch report to ensure it grouped and rounded more accurately to reflect the data generated for Inventory batches sent to Financials or Third Party accounting systems.
		I1907129	Added new URLs table, new column (UrlID) to dbo.Procs in UpdateMaster table. Added new Datatransfer entry for new table (URLs).
DataTransfe	rBuilder.exe 05/01/2020	12001184	Modified to pickup the databases from SQL14, determine whether to build
	00.011,2020		from the Development or Release databases, and backup the release databases and apply it to the release databases when the source is the development dbs.
			Also now updates the DataVersionNo in the Development databases so they match the release. In addition the VersionDate and VersionTime are now updated. This is not applied to customer databases at this time.
Estimating.d	III		
6.4.172	05/01/2020	12003102	Advanced SalesOrder Generation will now launch the .Net version when the module activation "AdvancedBatchProcessing" is enabled.
InventoryTra	insfer.dll 05/01/2020	12003223	Altered excel import and transfer generator logic to not allocate any owner
0.4.30	03/01/2020	12000220	inventory to the transfer itself if detail allocation is required to a given transfer detail.
Invoice.trdp			
6.4.2	05/01/2020	12001358	Adjusted to use Ddiscount field for individual line items instead of header discount.
ItemEditor.d			
6.4.140	05/01/2020	12003175	Modified to validate upon save that no inventory exists for an item when changing a tracking type to ensure that no inventory was created after the user began editing the item.

6.4.140	05/01/2020	I1911304 I2004060 I2003257	Added validation to prevent freight, duty, and overhead factors of 2 or greater from being saved in an Item Vendor form. Modified to copy the CellOccurrence when including operations in an item copy. The All Items Roll-Up has been modified to respect the "Include Labour Setup in Standard Cost" application preference in all cases.
JobCosting.6	ili 05/01/2020	I2002259 I2003135	Handle all material shipped on sales order details not tied to a work order detail where the material was determined to not come from another work order for a job. Added validation to ensure that a job cannot be approved if the opportunity detail items contain invalid data such as no item id.
MatReq.dll 6.4.135	05/05/2020	I2002214 I2002220 I2002217 I2004016 I2003183	When updating selective MatReq for an order with subcontracted items, the materials required by those items will now appear only when a change in quantity has occurred. Selective MatReq will now display the Purchase Order Note, and User Defined fields from the BOM where available. When mat req generates multiple work orders, all document numbers will now be shown when processing is complete. BOM user defined values will now appear in forecast MRP based on user defined field labels. These values will flow through to MatReq. The DisplayPurchInvUserDefined application preference no longer needs to be enabled for custom user defined fields to be shown in the MatReq form.
POInvoice.dl 6.4.111	I 05/01/2020	I1908183	Entering non numeric characters in the Unit Cost field when entering a line returnd an error which will not allow you to continue.
Receiving.dl 6.4.145	05/01/2020	I1912211 I1706219 I1910274 I2003214 I2001372 I2004069 I2002123	Corrected issue with non tracked vendor returns recording in the audit trail without the audit creator detail id For non tracked vendor returns, ensure the audit trail source description states "Returned For xxxxxx" as opposed to "Recevied for XXXXX' Improved performance of loading the receiving/vendor return combo and corrected the filtering by n days. Ensure when consuming negative inventory and there is a cost difference to record the cost compensation using the transaction date. Correct display of Qty Left on PO when first loading onto the receipt a PO that is bound to a subcontract document Corrected issue processing a vendor return for a Po line that has multiple receipt partial receipts. The quantity left on purchase order calculation for subcontracted items has been updated.

6.4.145	05/01/2020	12004090	When receiving non-stock materials, the status of the sales order line will now determine if sales orders will have inventory allocated via the "Lot/Serial Tracking" line button.
RptInventor 6.4.57	y.dll 05/01/2020	12004028	Added support for the Revision and Routing fields to the Physical Inventory Worksheet report.
SalesOrder. 6.4.214	dII 05/05/2020	I2003077 I2002206 I2002217 I2002220 I2002214	Mat req for work orders under subcontract parents will no longer be removed when mat req is updated for the source document. When updating mat req for orders that contain subcontract items with make non-stock components, new work order will no longer be generated. When mat req generates multiple work orders, all document numbers will now be shown when processing is complete. Selective MatReq will now display the Purchase Order Note, and User Defined fields from the BOM where available. When updating selective MatReq for an order with subcontracted items, the materials required by those items will now appear only when a change in quantity has occurred.
Seradex.Ap 6.4.9	pBox.exe 05/01/2020	I1907129	Added new ways to handle new proctype 9, for IDs that open an external web page.
Seradex.As 6.4.0	pose.dll 05/01/2020	I1803239	Automate Auto Config Processor to be scheduled to run in Windows Scheduler with Aspose.Net.
Seradex.Au	toUpdater.Update(Client.dll	
6.4.6	04/14/2020	11907112	Modified to allow AppBox sufficient time to close when running AutoUpdater
		I1907074	in an automated fashion. Updated to correct the error message that is displayed when an issue with detecting Outlook's Platform (32/64-bit)
Seradex.Ba	seSystem.dll 05/01/2020	I1901286	Enhanced internal handling of DataReaders.
Seradex.Co 6.4.58	mmonServices.dll 05/01/2020	I1901286	Added transaction log handling and generic message box forms.

Technical Release Notes April 2020

6.4.58 05/01/2020 12002068

WorkOrder and Shipping .Net forms have been enhanced to include Search

tab

I2003102 Added new module activations to support Advanced SalesOrder Generation

for .Net Estimate.

Seradex.ConfiguratorSystem.dll

6.4.12 05/01/2020 I2003154 Corrected issue where index was out of bound.

Seradex.Connection.dll

6.4.44 05/01/2020 I2003180 Adjusted the destroy connection function to allow a bypass of .Net form

closing event.

Seradex.Email.dll

6.4.9 05/01/2020 I1803239 Automate Auto Config Processor to be scheduled to run in Windows

Scheduler with Aspose.Net.

This also includes error logging an optional error emailing when possible, and

to shut down Auto Processor when there is a connection failure. Optional preferences are set in the command parameters of the executable,

AutoProcessor.exe

Seradex.Infragistics.dll

6.4.41 05/01/2020 I1901286 Facilitate easier dynamic control theme colouring.

Seradex.Library.dll

6.4.16 05/01/2020 I1901286 Added ServiceOrderDetails table.

Seradex.OrderEntry.Bases.dll

6.4.19 05/01/2020 I1901286 Added handling for the Service Order module.

Seradex.OrderEntryLibrary.dll

6.4.13 05/01/2020 I1901286 Added item selection and price calculation handling for Service Order.

Seradex.ProductConfigurator.dll

6.4.4 05/01/2020 I1804249 Modified Configurator auto processing to report errors via logging and

optional emailing when possible and to shut down Auto Processor when there is a connection failure. Optional preferences are set in the command

parameters of the executable, AutoProcessor.exe

Technical Release Notes April 2020

6.4.4 05/01/2020 11803239 Automate Auto Config Processor to be scheduled to run in Windows Scheduler with Aspose.Net.

This also includes error logging an optional error emailing when possible, and to shut down Auto Processor when there is a connection failure. Optional preferences are set in the command parameters of the executable,

AutoProcessor.exe

Seradex.Production.WorkOrder.dll

The Work Order form will now display the Customer PO and Customer Ref 6.4.25 05/01/2020 12001132

No values when appropriate.

Seradex.Purchasing.dll

6.4.18 05/01/2020 12003132 Copying a existing purchase order will now default the buyer to the active

user.

12003209 Modified order header property change notification method.

12001359 Ensured when the PO detail Quantity changes, that the PO detail status is

recalculated.

Seradex.ServiceOrderSystem.dll

6.4.0 05/01/2020 11901286 Created a library for Service Order data and business logic.

Seradex.SpecBuilder.dll

6.4.1 05/01/2020 11803239 Automate Auto Config Processor to be scheduled to run in Windows

Scheduler with Aspose.Net.

Seradex.Strings.dll

6.4.37 05/01/2020 12002068 WorkOrder and Shipping .Net forms have been enhanced to include Search

tab.

Seradex.Win.BatchProcessor.dll

6.4.14 05/01/2020 12003102 Adjusted the logic to only show the Advanced SalesOrder Generation search

tab when launching from the Estimate module.

Seradex.Win.Controls.dll

6.4.15 05/01/2020 11901286 Various corrections and enhancements for the AddressGrid and Contact

controls.

Seradex.Win.Estimate.dll

6.4.21	05/01/2020	I2003102 I2002068 I1912075 I2003141	.NET Advanced SalesOrder Generation has been added. Estimate, Invoice/Credit Note, Purchase Order, Receiving/Vendor Return, and Sales Order .Net forms have been enhanced to include the Search tab. Pressing F5 while the main combo is selected will now refresh the list of documents. Estimate and SalesOrder .Net forms have been modified to prevent approval if any of its lines are not fully processed.
Seradex.Wir 6.4.109	n.Financials.dll 05/01/2020	I2003061 I2004030	Corrected issue applying debit notes that have remittance vendor to vendor invoices that also have a remittance vendor. For manual Journal entries, when going to approve check for any changes made between the time of loading and approval and reload prior to approval.
Seradex.Wir 6.4.3	n.IntercompanyMa 05/01/2020	nagement.dll 12003180	Adjusted the destroy connection function to allow a bypass of .Net form closing event.
Seradex.Wir 6.4.31	n.Invoice.dII 05/01/2020	I1910025 I2002089 I1911265 I2002068 I1912075	The .Net Invoice or Credit Note form will now respect the profile activation set up when the system attempts to launch the module. The carrier name and number field will no longer be editable. Added an invoice approval status column to the invoice combo box. Estimate, Invoice/Credit Note, Purchase Order, Receiving/Vendor Return, and Sales Order .Net forms have been enhanced to include the Search tab. Pressing F5 while the main combo is selected will now refresh the list of documents.
Seradex.Wir 6.4.5	n. Production.dll 05/01/2020	I2004061	Added more robust validation to the Data Collection import
Seradex.Wir 6.4.40	n.Purchasing.dll 05/01/2020	I2002068 I1912075 I2003222 I2003209	Estimate, Invoice/Credit Note, Purchase Order, Receiving/Vendor Return, and Sales Order .Net forms have been enhanced to include the Search tab. Pressing F5 while the main combo is selected will now refresh the list of documents. Double-click event on PO combo now reloads the selected document. Ensure the Approve button's text is reverted if Data Validation fails on approval.
Seradex.Wir 6.4.24	n.QuickConfigurate 05/01/2020	or.dll 11909285	Files viewing functionality has been added.

			Αριίί 2020	
6.4.24	05/01/2020	12003154	Processing an existing parent-child BOM configure item will now retain the existing detail line.	
	n.Receiving.dll	12002069	Estimate Invaire/Cradit Note Durchase Order Bessiving/Vender Beturn	
6.4.35	05/01/2020	12002068	Estimate, Invoice/Credit Note, Purchase Order, Receiving/Vendor Return, and Sales Order .Net forms have been enhanced to include the Search tab.	
		I1912075	Pressing F5 while the main combo is selected will now refresh the list of	
		11012010	documents.	
6.4.36	05/05/2020	12005046	An unnecessary menu item has been removed from the receiving line's right click menu.	
Seradex.Win	.SalesOrder.dll			
6.4.25	05/01/2020	12002068	Estimate, Invoice/Credit Note, Purchase Order, Receiving/Vendor Return, and Sales Order .Net forms have been enhanced to include the Search tab.	
		l1912075	Pressing F5 while the main combo is selected will now refresh the list of documents.	
		12003141	Estimate and SalesOrder .Net forms have been modified to prevent approval if any of its lines are not fully processed.	
		I1905294	Selects Customer PO text box after being prompted it is empty when	
			attempting to save a sales order.	
6.4.26	05/05/2020	12005046	An unnecessary menu item has been removed from the sales order line's right click menu.	
Seradex.Win	ı.Search.dll			
6.4.80	05/01/2020	I1901286	Added functionality to facilitate external filtering.	
		12002068	WorkOrder and Shipping .Net forms have been enhanced to include Search tab.	
		12003102	Add logic to only load given searches.	
Soradov Win	.ServiceOrder.dll			
6.4.0	05/01/2020	I1901286	Created a .Net interface for the Service Order module.	
5 1.1. 5	00/01/2020			
Seradex.Win	05/01/2020	I1912075	Pressing F5 while the main combo is selected will now refresh the list of	
0.4.22	05/01/2020	11912075	documents.	
		12002068	WorkOrder and Shipping .Net forms have been enhanced to include Search tab.	
Seradex.Win	ı.WorkOrder.dll			
6.4.19	05/01/2020	12002068	WorkOrder and Shipping .Net forms have been enhanced to include Search tab.	

6.4.19	05/01/2020	I1912075 I2001132 I1911308	Pressing F5 while the main combo is selected will now refresh the list of documents. The Work Order form will now display the Customer PO and Customer Ref No values when appropriate. Removed erroneous second call to open BOM when using shortcut keys. Should now close BOM without spawning an extra.
ServiceOrde 6.4.70	er.dll 05/01/2020	I1901286	Created a ServiceOrder form API.
SubContrac 6.4.61	ting.dll 05/05/2020	I2002217	When mat req generates multiple work orders, all document numbers will now be shown when processing is complete.
sxEDIBridge 6.4.55	e.dII 05/01/2020	I2004081	Ensure that UNC paths that have no pre-existing files are handled correctly when determining if the specified EDI output folder exists.
sxMaintenai 6.4.136	nce.dll 05/05/2020	I2002248 I2003187	While assigning a customer ship to link to a contact, prospect information will now be visible for any customer ship to setup against a prospect account. The Grid MessageBox screen has been altered to allow OrderStream to control the header height when needed.
sxMaintenai 6.4.28	nceControls.ocx 05/05/2020	I2003195 I2004130	Modified to include the work order completion in the application preference that allows the creation of negative inventory when not enough is available. It will now read: "Allow to Create Negative Inventory from Shipping, Invoice and WO". The caption for "Include Labour Setup in Cost" application preference has been updated to "Include Labour Setup in Standard Cost" to clarify its use.
sxProfile.dll 6.4.24	05/01/2020	I1909211	Lookups list will now not overwrite the last node in the list when adding any custom parent nodes.
sxRuntime.6	e xe 05/01/2020	I1907129	Added new ways to handle new proctype 9, for IDs that open an external web page.

05/01/2020

12005009

Seradex OrderStream

Technical Release Notes April 2020

Modified to force a new set of related interop files to be created.

sxWorkFlow.c

6.4.26

			·
WorkOrder.	dll		
6.4.191	05/05/2020	12003281	Corrected a work order completion problem when backflushing using the application preference "Backflush additional Inventory to satisfy BOM Requirements" where a miscellaneous stock item allocated to a line was not being evaporated under very specific circumstances.
		12002206	When updating mat req for orders that contain subcontract items with make non-stock components, new work order will no longer be generated.
		12002217	When mat req generates multiple work orders, all document numbers will now be shown when processing is complete.
		12003077	Mat req for work orders under subcontract parents will no longer be removed when mat req is updated for the source document.
		12003195	Modified to implement the negative inventory check and the authorization code functionality when backflushing stock components during the work order completion process.
		12002214	When updating selective MatReq for an order with subcontracted items, the materials required by those items will now appear only when a change in quantity has occurred.
		12002220	Selective MatReq will now display the Purchase Order Note, and User Defined fields from the BOM where available.
