

# Seradex OrderStream

## Technical Release Notes

April 2025

### AcctMaintenance.dll

6.4.136	04/09/2025	I2411231	The Customer Statement checkbox is now correctly hidden where Seradex Financials is not set up as the accounting system.
		I2307071	Enhanced to allow DocumentStorage to use SQL FileTable when enabled.

### ActiveM20.dll

6.4.159	04/09/2025	I2501277	Added a further constraint to PO line status override validation to Invoiced, that the quantity received must be greater than zero for the validation to fail.
		I2410100	A single-line instance of the Inventory Allocation sub-form will no longer partially lock up on generation.

### ActivityLog.ocx

6.4.40	04/09/2025	I2307071	Enhanced to allow DocumentStorage to use SQL FileTable when enabled.
--------	------------	----------	--

### Adjustment Report.trdp

6.4.0	04/09/2025	I2411097	A Telerik Adjustment report has been added.
-------	------------	----------	---

### AdminTools.dll

6.4.78	04/09/2025	I2407070	Changed the Dbox menu item caption Upload Templates, to Upload Workbooks in Admin Tools
--------	------------	----------	---

### BatchProcessing.dll

6.4.49	04/09/2025	I2307071	Enhanced to allow DocumentStorage to use SQL FileTable when enabled.
--------	------------	----------	--

### Buy Items Lead Time Analysis.trdp

6.4.0	04/09/2025	I2411097	A Telerik Buy Item Lead Time Analysis report has been added.
-------	------------	----------	--

### ClientReports.dll

6.4.106	02/06/2025	I2502056	Added a special case for MatReq email notifications.
6.4.107	04/09/2025	I2412105	Dropped support for Access-style queries for custom Telerik reports.
		I2310043	Modified to eliminate printer issues due to a Microsoft bug that leaves Registry entries behind from disconnected/logged out remote sessions.

### Config.dll

6.4.228	01/31/2025	I2501328	<p>1. Corrected an issue that applies default values set up in a property filtering worksheet, and automatically selects the default values setup in the sheet, even though the client does not intend to do so.</p> <p>Now, this feature is only enabled when the default column caption, column 4, is specifically specified as [Default Value] or [DefaultValue]. This shows that the client intends to use the column is the default column.</p> <p>2. Corrected an issue that sometimes clears control values when you click to filter a specific property that has excel or query controlled properties.</p> <p>3. Updated the UNDO command to only redo the property selections for the current ItemSpec, avoiding all other reloading routines, and enhancing performance.</p>
6.4.229	02/28/2025	I2502269	<p>Updated the configurator to:</p> <p>1. Update excel filtered dropdown controls with the empty values returned from applying excel filterings. Previous versions did not update the control with empty values, and left the existing as is, even though they no longer apply.</p> <p>2. Avoid significant delays after closing configurator form to get back to the transaction module.</p> <p>3. Ensure that the line item navigation, using the navigation buttons in the bottom of the form loads the line configurations correctly and writes the correct line quantity to the input worksheet.</p>
6.4.230	03/04/2025	I2503022	Modified the process accepting changes to the Order Qty field in the Configurator form, the net effect of which is that it will no longer behave strangely when entering the decimal point.
6.4.231	03/05/2025	I2502293	Corrected an issue in the configurator that was clearing selected excel property filtering dropdown values, when the configurator property validation is preference enabled, and a configuration is saved
6.4.232	04/09/2025	I2503076	Implemented the logic to handle the rolling feature of the sub components created by the auto processor, when reconfiguring a Dbox 2.0 line item that contain sub assemblies.
		I2503088	Updated the Accounting Information grid designer in configurator setup module, to show the proper grid column names
		I2503153	Updated the configurator to re-open the active workbook configurator workbook for use, and not throw an error, when the user closes it manually and continues to use the configurator controls, which requires the opened the workbook for use.
		I2503162	Implemented a new feature to allow the workbook to be programmed to update a shared data tab between configurators of a parent and it's children, for configurators that support sub components rollup and data sharing
		I2503171	Updated the configurator to only run QC, Excel and other dropdown filters for text boxes when the user actually makes a change in a text box. Also ensured that duplicate and recursive filters are ignored to enhance performance.
		I2503301	Corrected an issue in the configurator that was writing the product line name instead of the item's item number in cell C6. Product line name should be C5.

6.4.232	04/09/2025	I2504028	Corrected an issue in LAN configurator that was unnecessarily and incorrectly removing the ORDER BY clause in a user defined QC filtering query statement and causing errors when the bad query is used to bind a combo box when a user drops down a property combo box
		I2504047	Corrected an issue in the LAN configurator to properly trigger the filtering of excel properties when a textbox property value is changed.
		I2501303	Updated to ensure that the configurator workbook is re-opened when the user closes it after viewing, and clicking a check box property or enters a value in any other property.
		I2502030	Corrected an issue in the configurator that was causing line item configurations not to load properly when the user uses the line item navigation buttons to load the respective line configurations.
		I2501345	Corrected an issue in the configurator that was causing the query controlled property filtering feature to execute filtering SQL statements 3 times, instead of just once, in 2 separate events, which occurs when loading the dropdowns and attempting to set dynamic default values.
		I2502179	Updated to properly support the newly enhanced document storage feature, to avoid errors it was originally throwing when configuring from LAN
		I2502231	Corrected a problem where numeric character product line names were causing errors during processing of when creating temp table for a parent child shared data product line.
			Fixed an issue where the rolled up sub assembly component line items were unable to be reconfigured in the Dbox 2.0, where the rolled up child configurations were no longer present in Dbox 2.0. Ensured that, the related original records were updated with the newly created processed itemspecs.
		I2501108	Included to reflect the modifications that were made to the Spec builder code.
		I2412149	Enhanced the configurator performance by limiting the amount of communication trips with the excel workbook.
		I2307071	Enhanced to allow DocumentStorage to use SQL FileTable when enabled.
		I2407070	Removed the requirement of the '3D Config' configurator preference to enable web controls and their related features in Configurator Setup
		I2411081	Added a new feature to set the initial default value setup against a property when the property is enabled in LAN configurator, or made visible in Dbox configurator via the property enabling feature, after being disabled and cleared.
		I2405339	Implemented a new menu item in configurator setup under the Tools   Dbox menu item to manage Dbox configurator images within the Dbox web application
		I2408120	Implemented support in Aspose auto processor only, to rollup bom components of itemspecs with parent itemspecid matching line item itemspecs created in Dbox 2 for configurators that has the field ChildBomsAreSubAssemblies set to TRUE. This includes the setup in configurator setup, for the shared data feature between parent and child configurators via query controlled and excel filters and triggers.
		I2408099	Created a new function that will increment an item revision from A to Z to AA, and then AB, AC and so on. At AZ, the revision number will then reset to BA, and continue with BB, BC and so on.

6.4.141	04/09/2025	I2411289	Credit Note unapproval will now set the quantity credited to date back to zero.
		I2411167	Corrected the grammar of an error message.
		I2307071	Enhanced to allow DocumentStorage to use SQL FileTable when enabled.
<b>CRM.dll</b>			
6.4.149	04/09/2025	I2307071	Enhanced to allow DocumentStorage to use SQL FileTable when enabled.
<b>Daily Shipping Report.trdp</b>			
6.4.0	04/09/2025	I2411097	A Telerik Daily Shipping report has been added.
<b>DataTransfer.mdb</b>			
6.4.322	04/09/2025	I2410158	References to fraSalesTracker have been removed from Group Setup.
		I2407026	Core product Production Status and Work Center Status searches have been added.
		I2309274	Profile nodes have been added to launch EDI setup and maintenance, and app integration setup.
		I2407054	Update the Report Query for the Inventory Overage report to conform to the new MRP temp table data model.
		I2307260	An application preference to suppress the update mat req prompt has been added.
		I2410255	Added the core Job Costing Opportunities search to a new core Search Module for the Opportunities module.
		I2404275	Modified and added Financials integrity checks to find unposted AP/AR invoices.
		I2411061	An integrity check was added to identify and correct GL Accounts which are inappropriately set to be material accounts.
		I2411097	Made several minor changes to converted report queries and dialog setup.
		I2408120	Implemented the required data records and data model changes to tables ProductLineTypes, ProductLine, ProductLineProperties, ExcelFilters and ItemSpecs tables
		I2405045	The mat req audit trail details table now records BOM user defined values.
		I2411329	DocumentStorage records for EngineeringRequests will be modified to correctly relate the CreatorHeaderID to the EngineeringRequestID.
		I2412038	Modified the "Financials - Missing Currency Revaluation Codes" integrity check to result in a pass if there is only one currency code defined in the database.
		I2312152	Modified to add the OrderStreamObjectEventID column to the AppIntegrationModuleSetup table, which is a reference to the parent table OrderStreamObjectEvents.
		I2501219	Refactored the base query behind the core Invoice search.
		I2406329	The Mat Req Audit Trail details table will now store decimals for the To and From quantities.
		I2410170	Set core form reports for Work Order, Purchase Order, and Shipping, to Show and Show Range.
		I2411326	Dashboard Rows, Dashboard Columns, Dashboard Types and Default Dashboards added.

6.4.322	04/09/2025	I2502098	New Module Searches created for DBOX 2
		I2501108	Modified to add the WorkOrderGroupConsolidationMapping table necessary changes for the implementation of the new logic that will allow processing the grouped child work orders and their parents through the Shop Floor Execution module.
			Also, modified the base Search for the Grouped Work Order Generator to include the changes to the WorkOrderGroupConsolidationMapping table. In addition, modified the ItemSpecStruc to add a new Boolean column "HasGroupedChildWO" to track when a subassembly that is marked as "WO Groupable" has its labour moved to a grouped child work order so that the parent work orders labour schedule can be recreated.
		I2502032	Increase the size of the TransactionItemSpecOverrides.UserCreated field to 50 characters.
		I1811005	Added the TrackedAsset OwnerType.
		I2307071	Added DocumentStorage data model changes, and a FileTable support detection stored procedure.
		I2412222	Modified the Items - Make Items Without Bills of Material integrity check to include only Make items. Added a distinct new integrity check: Items - Subcontract Parent Items Without Bills of Material.

#### DBox Web Front End Components (WFE)

6.4.45	04/09/2025	I2411326	Dashboard builder created for DBOX 2
		I2411327	DBOX 1 CRM functionality has been completed in DBOX 2
		I2411328	DBOX 1 Order Entry features have been completed in DBOX 2
		I2501006	Modified the Reset Password and Set Password links/pages to no longer require the Hash (#) based routing strategy to fix an issue where certain spam filters would hijack the link and remove anything after the hash causing the user to get sent to the home page of DBOX.

#### DC2001.dll

6.4.69	04/09/2025	I2412042	DataCollection documents opened from search will now be able to display all documents, regardless of that module's form's date limitations.
--------	------------	----------	---

#### Employee Weekly Time Sheet Detail.trdp

6.4.0	04/09/2025	I2411097	Converted Employee Weekly Time Sheet Detail to Telerik.
-------	------------	----------	---

#### EngineeringChange.dll

6.4.25	04/09/2025	I2307071	Enhanced to allow DocumentStorage to use SQL FileTable when enabled.
--------	------------	----------	--

#### ExcelBOMImport.dll

6.4.17	04/09/2025	I2307071	Enhanced to allow DocumentStorage to use SQL FileTable when enabled.
		I2410052	More verbose validation messages will be delivered to the user when using Import BOMs feature: reasons for halting the import, and reasons for excluding BOMs from the import.

6.4.17	04/09/2025	I2411304	Items updated via ExcelBomImport utility will no longer create malformed ItemVendors records if they have no vendor information set in the Excel file being processed.
<b>History.dll</b>			
6.4.52	04/09/2025	I2407026	The Work Center Status profile node now launches a new Work Center Status search.
<b>IntegrityCheck.dll</b>			
6.4.28	04/09/2025	I2412080	The temporary table used by Integrity Check will now have its Primary Key assignment handled by SQL instead of named statically in code, preventing errors where a second instance of the table is created.
<b>Inventory - Quantity by Item.trdp</b>			
6.4.0	04/09/2025	I2411097	Converted Inventory - Quantity by Item report to Telerik
<b>Inventory - Valuation by Category.trdp</b>			
6.4.1	04/09/2025	I2503040	Restored the grand total fields to the report file.
<b>InventoryAdjustment.dll</b>			
6.4.112	04/09/2025	I2411154	Modified to correct an issue with the Physical Inventory Count sheet functionality where items that currently do not have any inventory available in the system were not being properly adjusted if their on hand quantities were different from zero when the count sheet was originally created and the new counted quantities are equal to the original inventory quantities on hand.
		I2307071	Enhanced to allow DocumentStorage to use SQL FileTable when enabled.
		I2412073	Additional validation was added to prevent saving an adjustment line for a lot/serial item without a lot/serial number being selected.
<b>InventoryTransfer.dll</b>			
6.4.132	04/09/2025	I2307071	Enhanced to allow DocumentStorage to use SQL FileTable when enabled.
		I2410112	The alt destination columns will be hidden if appropriate when creating a new transfer.
<b>Invoice.dll</b>			
6.4.197	04/09/2025	I2307071	Enhanced to allow DocumentStorage to use SQL FileTable when enabled.
		I2403199	Invoice approval can now pass approval messages up to calling modules for handling.
		I2411289	Credit Note unapproval will now set the quantity credited to date back to zero.

#### Item Vendor Details.trdp

6.4.0	04/09/2025	I2411097	Converted Item Vendor Details to Telerik.
-------	------------	----------	---

#### ItemEditor.dll

6.4.169	04/09/2025	I2411005	Added support for the Inventory Qty Tolerance field.
		I2307071	Enhanced to allow DocumentStorage to use SQL FileTable when enabled.
		I2501108	Included to reflect the modifications that were made to the Spec builder code.
		I2502091	Updated the individual item rollup to correctly calculate the weight of an item that has a child which is a non-assembly item with a BOM. Also no longer displays Weight, Volume, and Container Qty in scientific notation.

#### JobCosting.dll

6.4.114	04/09/2025	I2307071	Enhanced to allow DocumentStorage to use SQL FileTable when enabled.
		I2407185	Removing a work order from a job will also remove its immediate sub-work orders from that job.
		I2409187	A Job Costing or Opportunity document opened by double-clicking the Job No combo in Estimate or SalesOrder will launch in the mode appropriate to the document type.

#### MatReq.dll

6.4.159	04/09/2025	I2407256	The consolidated mat req table definition is now available for modules outside of mat req.
---------	------------	----------	--

#### Microsoft.Extensions.Logging.Abstractions.dll

6.4.0	04/09/2025	I2404246	Added to support PdfSharp.dll
-------	------------	----------	-------------------------------

#### MicrovellumImport.dll

6.4.35	04/09/2025	I2307071	Enhanced to allow DocumentStorage to use SQL FileTable when enabled.
--------	------------	----------	--

#### Open PO Summary By PO.trdp

6.4.0	04/09/2025	I2411097	Converted Open PO Summary BY PO to Telerik.
-------	------------	----------	---

#### Open Work Order - Hot Flag Items.trdp

6.4.0	04/09/2025	I2411097	Converted Open Work Order - Hot Flag Items to Telerik.
-------	------------	----------	--

#### Open Work Order by Item.trdp

6.4.0	04/09/2025	I2411097	A Telerik Open Work Order by Item report has been added.
-------	------------	----------	--

# Seradex OrderStream

## Technical Release Notes

April 2025

### Open Work Order by Work Order.trdp

6.4.0	04/09/2025	I2411097	A Telerik Open Work Order by Work Order report has been added.
-------	------------	----------	--

### Open Work Order.trdp

6.4.0	04/09/2025	I2411097	A Telerik Open Work Order report has been added.
-------	------------	----------	--

### Order Action by Due Date.trdp

6.4.0	04/09/2025	I2411097	Converted Order Action by Due Date to Telerik.
-------	------------	----------	--

### Order Action by Item.trdp

6.4.0	04/09/2025	I2411097	Converted Order Action by Item to Telerik.
-------	------------	----------	--

### PdfSharp.Charting.dll

6.4.1	04/09/2025	I2404246	Updated to the latest version.
-------	------------	----------	--------------------------------

### PdfSharp.dll

6.4.1	04/09/2025	I2404246	Support for combining pdf documents has been added.
-------	------------	----------	---

### PdfSharp.System.dll

6.4.0	04/09/2025	I2404246	Support for combining pdf documents has been added.
-------	------------	----------	---

### PO Log With WO.trdp

6.4.0	04/09/2025	I2411097	Converted PO Log With WO to Telerik.
-------	------------	----------	--------------------------------------

### POInvoice.dll

6.4.139	04/09/2025	I2307071	Enhanced to allow DocumentStorage to use SQL FileTable when enabled.
---------	------------	----------	--

### ProductStatus.dll

6.4.15	04/09/2025	I2407026	The Production Status profile node now launches a new Production Status search.
--------	------------	----------	---

### Purchase History by Item.trdp

6.4.0	04/09/2025	I2411097	Converted Purchase History by Item to Telerik.
-------	------------	----------	--

# Seradex OrderStream

## Technical Release Notes

April 2025

### **PurchaseOrder.dll**

6.4.149	04/09/2025	I2307071	Enhanced to allow DocumentStorage to use SQL FileTable when enabled.
---------	------------	----------	--

### **QualityAssurance.dll**

6.4.17	04/09/2025	I2307071	Enhanced to allow DocumentStorage to use SQL FileTable when enabled.
--------	------------	----------	--

### **Receiving.dll**

6.4.170	04/09/2025	I2307071	Enhanced to allow DocumentStorage to use SQL FileTable when enabled.
---------	------------	----------	--

### **ReleaseManager.exe**

6.4.148	01/27/2025	I2309298	Modified to add enhanced testing issue tracking.
		I2212196	Modified to copy files in multiple groups instead of all at once to eliminate the issue with SHFileOperation that causes the command to fail when arguments are too long.

### **Reorder Card 3.trdp**

6.4.0	04/09/2025	I2411097	A Telerik Reorder Card 3 report has been added.
-------	------------	----------	---

### **RptDataCollection.dll**

6.4.85	04/09/2025	I2310043	Modified to eliminate printer issues due to a Microsoft bug that leaves Registry entries behind from disconnected/logged out remote sessions.
--------	------------	----------	---

### **RptEstimating.dll**

6.4.23	04/09/2025	I2310043	Modified to eliminate printer issues due to a Microsoft bug that leaves Registry entries behind from disconnected/logged out remote sessions.
--------	------------	----------	---

### **RptFinancials.dll**

6.4.74	04/09/2025	I2310043	Modified to eliminate printer issues due to a Microsoft bug that leaves Registry entries behind from disconnected/logged out remote sessions.
--------	------------	----------	---

### **RptInventory.dll**

6.4.63	04/09/2025	I2310043	Modified to eliminate printer issues due to a Microsoft bug that leaves Registry entries behind from disconnected/logged out remote sessions.
		I2407054	Overhauled the Inventory Overage report handling to use the new .Net MRP system.

# Seradex OrderStream

## Technical Release Notes

April 2025

### RptManagement.dll

6.4.27	04/09/2025	I2310043	Modified to eliminate printer issues due to a Microsoft bug that leaves Registry entries behind from disconnected/logged out remote sessions.
--------	------------	----------	---

### RptOrderEntry.dll

6.4.48	04/09/2025	I2310043	Modified to eliminate printer issues due to a Microsoft bug that leaves Registry entries behind from disconnected/logged out remote sessions.
--------	------------	----------	---

### RptPurchasing.dll

6.4.39	04/09/2025	I2310043	Modified to eliminate printer issues due to a Microsoft bug that leaves Registry entries behind from disconnected/logged out remote sessions.
--------	------------	----------	---

### Sales Order - On Hold.trdp

6.4.0	04/09/2025	I2411097	Converted Sales Order - On Hold to Telerik.
-------	------------	----------	---

### SalesOrder.dll

6.4.255	04/09/2025	I2405045	Generating mat req will now log the BOM description and user defined values associated with demand.
		I2307071	Enhanced to allow DocumentStorage to use SQL FileTable when enabled.
		I2411337	The Sales Order > Tools > Override Orders On Hold > Tools > Show All On Hold results will now include sales orders whose statuses are "Shipped" or "Partially Shipped and/or Partially Invoiced" and can be overridden.
		I2307260	When the new manual mat req update preference is enabled, users will no longer be asked to update mat req when saving a sales order with existing mat req.
		I2406228	Work Order, Shipping, and Invoice lines will be renumbered if force-deleted from their related sales order. Line deletion will also now be prevented if there are any completions against a related work order line.

### Seradex.AutomatedScanner.dll

6.4.6	04/09/2025	I2307071	Enhanced to allow DocumentStorage to use SQL FileTable when enabled.
-------	------------	----------	--

### Seradex.BaseSystem.dll

6.4.70	04/09/2025	I2409202	Events for custom add-ons have been expanded.
		I2407256	Support for adding custom menu items to .Net form has been added.

### Seradex.ComComponents.dll

6.4.62	04/09/2025	I2403199	A message handler has been added to allow com objects to communicate with calling .Net oobjects.
--------	------------	----------	--

#### Seradex.Common.EDISystem.dll

6.4.24	04/09/2025	I2309274	EDI Setup and Maintenance forms have been added to OrderStream.
--------	------------	----------	---

#### Seradex.CommonServices.dll

6.4.94	04/09/2025	I2411338	The Gen Key system will now correctly create revisions for Flow Keys if a duplicate exists.
		I2307260	An application preference to suppress the update mat req prompt has been added.
		I2408120	Required for compatibility with this release
		I2310043	Modified to keep preferences in sync with the Application Preferences form.
		I2307071	Enhanced to allow DocumentStorage to use SQL FileTable when enabled.
		I2503076	Implemented the logic to handle the rolling feature of the sub components created by the auto processor, when reconfiguring a Dbox 2.0 line item that contain sub assemblies.

#### Seradex.Connection.dll

6.4.59	04/09/2025	I2307071	Enhanced to allow DocumentStorage to use SQL FileTable when enabled.
		I2407054	Added SQL library function to determine temp table prefix.

#### Seradex.Dbox.dll

6.4.48	04/09/2025	I2501006	Modified the Reset Password and Set Password links/pages to no longer require the Hash (#) based routing strategy to fix an issue where certain spam filters would hijack the link and remove anything after the hash causing the user to get sent to the home page of DBOX.
		I2403126	Rewrote the configurator back end logic and object model for DBOX 2. The APIs are much more lightweight and now try to send only the data absolutely necessary to update the interface during processing. Better support for caching and added support for recovering in the case of a cache loss while processing. Many functions during processing are now performed in a batch to improve speed by removing round trips to the SQL server, which should be especially helpful for clients who's SQL servers are physically further away from our Web Server.
		I2410273	Added the DboxPunchClock module activation for use in both DBOX and ERP Anywhere
		I2411071	Added additional build configurations to allow more flexibility when providing rapid prototypes/pre-releases.
		I2407152	Implemented multi-value list property defaulting based on a field, DefaultValue, in the filtering SQL query, or an additional field in an excel property filtering worksheet called DefaultValue in both LAN and Dbox configurators.
		I2411081	Added a new feature to set the initial default value setup against a property when the property is enabled in LAN configurator, or made visible in Dbox configurator via the property enabling feature, after being disabled and cleared.

6.4.48	04/09/2025	I2412061	Corrected an issue in Dbox2 configurator to avoid sorting SQL based property values when the query statement already includes its own sort order.
		I2501260	Updated Dbox2 configurator properly clear the workbook cache for a specific configurator when you upload a configurator workbook.
		I2411328	DBOX 1 Order Entry features have been completed in DBOX 2
		I2411327	DBOX 1 CRM functionality has been completed in DBOX 2
		I2411326	Support for DBOX 2 style Dashboards added.
		I2502292	Fixed an issue with Linked Property Values where an empty value was being treated as an invalid selection causing it to get stuck in a loop of clearing an empty value which the system treated as if the value was being changed.
		I2503281	Fixed an issue where blank Sales Reps would be created when trying to convert a Prospect to a Customer in DBOX. When using the Seradex webmail server to send emails from DBOX, the "From" email address will now be automatically defaulted to admin@dbboxnow.com in the event that the email address isn't setup properly. GenKey when creating a Prospect now properly includes the TableCaption of Prospect or Suspect depending on whether a Prospect or Suspect is being created.

#### Seradex.Email.dll

6.4.20	04/09/2025	I2407304	Ensure that HTML email bodies are now handled through OrderStream's Outlook email generation system.
--------	------------	----------	--

#### Seradex.EstimateSystem.dll

6.4.49	04/09/2025	I2501355	Added code to set the DisplayLineNo and linked DetailID structure on sales order generation from estimate.
		I2307071	Enhanced to allow DocumentStorage to use SQL FileTable when enabled.
		I2411338	The Estimate Save system will no longer prevent Flow Key generation from an Opportunity Bid List.
		I2502080	When creating a copy of an estimate, if the current Customer Ship To is inactive, it is updated to the default.

#### Seradex.Financials.FinancialsSystem.dll

6.4.139	02/10/2025	I2502092	Corrected error in Dayend or auto posting when posting a Credit for an open invoice and the Application preference Apply Credit to customer only is not used.
---------	------------	----------	---

#### Seradex.Financials.TransactionPosting.dll

6.4.11	04/09/2025	I2412033	Updated production posting logic for the .net auto posting to account for recent changes to the current auto posting used.
--------	------------	----------	--

#### Seradex.Infragistics.dll

6.4.74	04/09/2025	I2411227	Modified the GL Account combo binding to include a new property, and use it to hide inactive accounts.
--------	------------	----------	--

6.4.74	04/09/2025	I2410092	The Purchase Order form will no longer permit non-buy Miscellaneous items to populate the line Items combo.
		I2307071	Modified to allow colouring disabled rows with a grey background.

#### Seradex.Inventory.dll

6.4.55	02/04/2025	I2501308	Adjusted GL validation for Transfers to only fail on non material GL accounts for Financials as this field is not used for third party accounting systems.
6.4.56	04/09/2025	I2307071	Added support for handling deletion of document storage.
		I2502187	Expose the Post Standard Labour accounting preference.
		I2408120	Implemented support in Aspose auto processor only, to rollup bom components of itemspecs with parent itemspecid matching line item itemspecs created in Dbox 2 for configurators that has the field ChildBomsAreSubAssemblies set to TRUE

#### Seradex.InvoiceSystem.dll

6.4.46	04/09/2025	I2411190	Ensure that loading a new Invoice correctly handles data with no tax specified. If an invoice line has no tax value specified, default to \$0.
		I2409202	The invoice system can now support custom add-ons.
		I2307071	Enhanced to allow DocumentStorage to use SQL FileTable when enabled.

#### Seradex.OrderEntryLibrary.dll

6.4.47	02/26/2025	I2501331	Modified the core code to support running custom queries via the ModuleSetup table when trying to read the customer number after selecting an item from the detail combo box in the Estimate, SalesOrder and Invoice modules.
6.4.48	04/09/2025	I2307071	Enhanced to allow DocumentStorage to use SQL FileTable when enabled.
		I2501004	Ensure the Additional Charge query custom filters are wrapped in parentheses when applying the system's DocumentID filter.

#### Seradex.ProductConfigurator.dll

6.4.23	04/09/2025	I2307071	Enhanced to allow DocumentStorage to use SQL FileTable when enabled.
		I2502231	Corrected a problem where numeric character product line names were causing errors during processing of when creating temp table for a parent child shared data product line.
		I2502179	Fixed and issue where the rolled up sub assembly component line items were unable to be reconfigured in the Dbox 2.0, where the rolled up child configurations were no longer present in Dbox 2.0. Ensured that, the related original records were updated with the newly created processed itemspecs. The numeric text formatting feature that converts configurator input fraction values to decimals before writing to the Input worksheet was missing in Aspose auto processor, and therefore Dbox configurators that requires this feature are coming up with incorrect pricing after auto processing. Implemented support for Configurator input fraction values conversion to decimals.

6.4.23	04/09/2025	I2408120	Implemented support in Aspose auto processor only, to rollup bom components of itemspecs with parent itemspecid matching line item itemspecs created in Dbox 2 for configurators that has the field ChildBomsAreSubAssemblies set to TRUE
		I2503076	Implemented the logic to handle the rolling feature of the sub components created by the auto processor, when reconfiguring a Dbox 2.0 line item that contain sub assemblies.
		I2503162	Implemented a new feature to allow the workbook to be programmed to update a shared data tabe between configurators of a parent and it's children, for configurators that support sub components rollup and data sharing

#### Seradex.Production.DataCollection.dll

6.4.79	04/09/2025	I2502187	Attempt to approve the DataCollection document when completing a work order line via SFE only if the Post Standard Labour accounting preference is False.
--------	------------	----------	---

#### Seradex.Production.QualityAssurance.dll

6.4.10	04/09/2025	I2307071	Enhanced to allow DocumentStorage to use SQL FileTable when enabled.
--------	------------	----------	--

#### Seradex.Production.WorkOrder.dll

6.4.56	04/09/2025	I2307071	Enhanced to allow DocumentStorage to use SQL FileTable when enabled.
		I2501108	Modified to include part of the backend logic required to support the update of the parent work order labour schedule when deleting a grouped child work order or one of its lines.
		I2307260	When the new manual mat req update preference is enabled, users will no longer be asked to update mat req when saving a work order with existing mat req.

#### Seradex.Purchasing.dll

6.4.51	04/09/2025	I2501078	It will now be possible to associate a PO line for a non-tracked, non-shippable item with a SO line for a non-tracked, non-shippable item even if the SO has a SOStatus of Shipped.
		I2307071	Enhanced to allow DocumentStorage to use SQL FileTable when enabled.
		I2412012	When copying a purchase order, the current date/time will be used to populate the PO.DateCreated field, rather than use the copied purchase order's value.

#### Seradex.Purchasing.MatReq.dll

6.4.7	04/09/2025	I2203298	When updating mat req, items that no longer have demand will now appear on the selective mat req form with a negative quantity to buy.
		I2407054	Added ability for MRP to report on inventory overages. Modified temp table creation in the MRP table creation system.

#### Seradex.Purchasing.PurchasingEDI.dll

6.4.4	04/09/2025	I2306277	Add handling for additional 855 EDI Acknowledgement Type codes.
-------	------------	----------	---

#### Seradex.Purchasing.ReceivingSystem.dll

6.4.53	04/09/2025	I2407256	The receiving system now supports custom actions after inventory is updated.
		I2307071	Enhanced to allow DocumentStorage to use SQL FileTable when enabled.
		I2502022	Corrected issue selecting a new item on a consignment replenishment receipt.

#### Seradex.ReportSystem.dll

6.4.30	04/09/2025	I2410170	Standardized ModuleID handling.
		I2404246	The report system now supports appending images and pdf pages to a pdf.

#### Seradex.ReportSystem.TelerikExtension.dll

6.4.1	04/09/2025	I2411169	The core product FileExists Telerik report function has been restored.
-------	------------	----------	--

#### Seradex.RestApi.dll

6.4.41	04/09/2025	I2410273	Added the DboxPunchClock module activation for use in both DBOX and ERP Anywhere
		I2501006	Modified the Reset Password and Set Password links/pages to no longer require the Hash (#) based routing strategy to fix an issue where certain spam filters would hijack the link and remove anything after the hash causing the user to get sent to the home page of DBOX.
		I2403126	Rewrote the configurator back end logic and object model for DBOX 2. The APIs are much more lightweight and now try to send only the data absolutely necessary to update the interface during processing. Better support for caching and added support for recovering in the case of a cache loss while processing. Many functions during processing are now performed in a batch to improve speed by removing round trips to the SQL server, which should be especially helpful for clients who's SQL servers are physically further away from our Web Server.
		I2411071	Added additional build configurations to allow more flexibility when providing rapid prototypes/pre-releases.
		I2405339	Updated API call "Update Configurator Images" uses to support use from LAN
		I2411326	Support for DBOX 2 style Dashboards added.
		I2411327	DBOX 1 CRM functionality has been completed in DBOX 2
		I2411328	DBOX 1 Order Entry features have been completed in DBOX 2

6.4.41	04/09/2025	I2503281	Fixed an issue where blank Sales Reps would be created when trying to convert a Prospect to a Customer in DBOX. When using the Seradex webmail server to send emails from DBOX, the "From" email address will now be automatically defaulted to admin@dbxnow.com in the event that the email address isn't setup properly. GenKey when creating a Prospect now properly includes the TableCaption of Prospect or Suspect depending on whether a Prospect or Suspect is being created.
--------	------------	----------	---

#### Seradex.SalesOrderSystem.dll

6.4.57	04/09/2025	I2501355	Added code to set the DisplayLineNo and linked DetailID structure on sales order generation from estimate.
		I2307071	Enhanced to allow DocumentStorage to use SQL FileTable when enabled.
		I2307260	When the new manual mat req update preference is enabled, users will no longer be asked to update mat req when saving a sales order with existing mat req.
		I2409202	The sales order system can now support custom invoice generation add-ons.

#### Seradex.ServiceOrderSystem.dll

6.4.15	04/09/2025	I2307071	Enhanced to allow DocumentStorage to use SQL FileTable when enabled.
--------	------------	----------	--

#### Seradex.Shipping.dll

6.4.39	04/09/2025	I2307071	Enhanced to allow DocumentStorage to use SQL FileTable when enabled.
		I2411005	If the quantity left on an order line is less than the minimum inventory quantity tolerance (0.0000000001 units of the item's stock UOM) then the quantity will be set to zero and the line will be considered complete.
		I2411011	The shipping module approval process has been updated to ensure that any unused inventory allocated to a sales order line is returned if the shipment line is completed with less than the ordered quantity that was allocated to the sales order line.

#### Seradex.SpecBuilder.dll

6.4.14	04/09/2025	I2307071	Enhanced to allow DocumentStorage to use SQL FileTable when enabled.
		I2501108	Modified to include the logic that allows recreating the specs for the parent work order lines when the grouped child work orders are created or fully/partially deleted so that the labour schedule can reflect those changes.

#### Seradex.Strings.dll

6.4.58	04/09/2025	I2307071	Enhanced to allow DocumentStorage to use SQL FileTable when enabled.
		I2307260	An application preference to suppress the update mat req prompt has been added.
		I2408120	Implemented support in Aspose auto processor only, to rollup bom components of itemspecs with parent itemspecid matching line item itemspecs created in Dbox 2 for configurators that has the field ChildBomsAreSubAssemblies set to TRUE

6.4.58	04/09/2025	I2310043 I2411300	Modified to keep preferences in sync with the Application Preferences form. Inactive locations will no longer be returned when populating Locations combos.
--------	------------	----------------------	---

#### **Seradex.UserDefined.dll**

6.4.27	04/09/2025	I2409160	The user defined form launched from module detail grids now uses a provided or local connection to prevent database transaction conflicts.
--------	------------	----------	--

#### **Seradex.Utilities.IntegrationMgrSystem.dll**

6.4.44	04/09/2025	I2309274 I2312152	An app integration setup form has been added to OrderStream. Modified the App Integration import process for Microvellum to be able to implement the new functionality that will allow the user to merge the existing order line BOM with the one being imported from Microvellum when the user specifies to do that. Note that this functionality requires a specific setup in the AppIntegrationModuleSetup table.
--------	------------	----------------------	--

#### **Seradex.Utilities.UserDefinedPropMaintSystem.dll**

6.4.17	04/09/2025	I2410120	Updated UserDefinedPropMaintSystem to validate UserDefinedModulePropertiies data and to prompt the user to check for unique records, and ensure that properties are selected for all rows before saving.
--------	------------	----------	--

#### **Seradex.Win.AdvancedDeliverySchedule.dll**

6.4.11	04/09/2025	I2501056	When launching Advanced Delivery Schedule from an external source (such as a search) populate the Document No combo with only the selected document.
--------	------------	----------	--

#### **Seradex.Win.BatchProcessor.dll**

6.4.31	04/09/2025	I2307071	Enhanced to allow DocumentStorage to use SQL FileTable when enabled.
--------	------------	----------	--

#### **Seradex.Win.Controls.dll**

6.4.52	01/27/2025	I2406283	Corrected an issue with the Save/Restore column default functionality on the new Workflow control, preventing it from Saving.
6.4.53	04/09/2025	I2307071 I2410283	Enhanced to allow DocumentStorage to use SQL FileTable when enabled. The PO form will now pass the vendor ID into the Vendor Ship From form and use this to insert a new VendorShipFrom record.

#### **Seradex.Win.CRMCampaigns.dll**

6.4.16	04/09/2025	I2409223	Email and Mailing columns are now editable.
--------	------------	----------	---

#### Seradex.Win.EDI.dll

6.4.0	04/09/2025	I2309274	EDI Setup and Maintenance forms have been added to OrderStream.
		I2407304	Added a new class to parse and send emails based on EDI file generation.

#### Seradex.Win.Estimate.dll

6.4.66	04/09/2025	I2406029	Copying an estimate line from another estimate will now carry the discount information forward.
		I2307071	Enhanced to allow DocumentStorage to use SQL FileTable when enabled.
		I2404221	On double-click, the Reference/Comment 2 field will now launch a popup dialog to facilitate easier editing.
		I2410216	Corrected the form's line right-click behaviour with respect to Item Running Balance, UOM Conversion, and Copy Line when executed upon an empty line.
		I2409202	The estimate form can now support custom add-ons.
		I2411117	Estimates that have had the Closed checkbox checked, can again have lines deleted from them.

#### Seradex.Win.Financials.dll

6.4.140	04/09/2025	I2410251	Added an indicator label to the Pay Vendor Invoices form to show the user that there are vendor invoices on the hold schedule.
---------	------------	----------	--

#### Seradex.Win.IntegrationManager.dll

6.4.31	04/09/2025	I2309274	An app integration setup form has been added to OrderStream.
--------	------------	----------	--

#### Seradex.Win.IntercompanyManagement.dll

6.4.13	04/09/2025	I2307071	Enhanced to allow DocumentStorage to use SQL FileTable when enabled.
--------	------------	----------	--

#### Seradex.Win.InventoryAdditionalInfo.dll

6.4.12	04/09/2025	I2307071	Enhanced to allow DocumentStorage to use SQL FileTable when enabled.
--------	------------	----------	--

#### Seradex.Win.Invoice.dll

6.4.70	04/09/2025	I2307071	Enhanced to allow DocumentStorage to use SQL FileTable when enabled.
		I2410216	Corrected the form's line right-click behaviour with respect to Item Running Balance, UOM Conversion, and Copy Line when executed upon an empty line.
		I2411227	Inactive GL accounts will now be hidden from the grid combos.
		I2409202	The invoice form can now support custom add-ons.
		I2411167	Corrected the grammar of an error message and logical test for whether or not the credit note is miscellaneous.
		I2403199	Batch invoice approval can now receive and consolidate inventory update messages.

#### Seradex.Win.MaintenanceTools.dll

6.4.26	04/09/2025	I2407146	The exploded view textbox will now have the focus when launched.
		I2407070	Updated to avoid not loading the required templates when there are more than one record in the AxisPreferences table. Previous versions will not load any template if there are more than one record in the table.
		I2501251	Added support for Web Update to handle DBOX 2 updates. Modified all API calls to contact the Customer Care API now instead of the Master API and added enhanced security/authentication.

#### Seradex.Win.MatReq.dll

6.4.6	04/09/2025	I2203298	When updating mat req, items that no longer have demand will now appear on the selective mat req form with a negative quantity to buy.
		I2412037	The Make-Stock MRP Facilities combo will now default to the employee's default location's facility on load.
		I2407054	Updated for compatibility with MRP table creation system.

#### Seradex.Win.NonConformanceManager.dll

6.4.34	04/09/2025	I2307071	Updated for compatibility with the latest DocumentStorage control.
--------	------------	----------	--

#### Seradex.Win.OrderEntryFormLibrary.dll

6.4.14	04/09/2025	I2406029	Copying an estimate line from another estimate will now carry the discount information forward.
		I2307071	Enhanced to allow DocumentStorage to use SQL FileTable when enabled.
		I2405339	Implemented a new menu item in configurator setup under the Tools   Dbox menu item to manage Dbox configurator images within the Dbox web application

#### Seradex.Win.Purchasing.dll

6.4.87	02/03/2025	I2502004	The Purchase Order form will no longer cause an error if the UserDefineds module is not activated.
6.4.88	04/09/2025	I2410170	Added Report User Access handling into the Purchase Order form.
		I2501078	It will now be possible to associate a PO line for a non-tracked, non-shippable item with a SO line for a non-tracked, non-shippable item even if the SO has a SOStatus of Shipped.
		I2307071	Enhanced to allow DocumentStorage to use SQL FileTable when enabled.
		I2407256	The purchase order form now supports custom tools menu items.
		I2411227	Inactive GL accounts will now be hidden from the grid combo.
		I2410216	Corrected the form's line right-click behaviour with respect to Item Running Balance, UOM Conversion, and Copy Line when executed upon an empty line.
		I2412094	Added support for loading/saving the Always Update Header Due Date menu item setting to the registry.

#### Seradex.Win.Receiving.dll

6.4.71	04/09/2025	I2411191	Added support for saving/loading/restoring grid settings of the Receiving Inventory Details sub-form. It will also no longer open maximized.
		I2410216	Corrected the form's line right-click behaviour with respect to Item Running Balance, UOM Conversion, and Copy Line when executed upon an empty line.
		I2407256	The receiving form now supports custom actions after inventory is updated.
		I2307071	Enhanced to allow DocumentStorage to use SQL FileTable when enabled.

#### Seradex.Win.RecurringTransaction.dll

6.4.32	04/09/2025	I2411283	Added logic on delete to ensure any current retention billing is set to zero.
--------	------------	----------	---

#### Seradex.Win.SalesOrder.dll

6.4.72	02/07/2025	I2502060	Modified the logic used to populate the ShipVia when changing CustomerShipTo.
6.4.73	04/09/2025	I2404221	On double-click, the Reference/Comment 2 field will now launch a popup dialog to facilitate easier editing.
		I2406228	Modified to correctly identify whether or not a work order is related to the selected sales order for the purpose of validating sales order line deletion and its subsequent work order line deletion.
		I2307071	Enhanced to allow DocumentStorage to use SQL FileTable when enabled.
		I2410216	Corrected the form's line right-click behaviour with respect to Item Running Balance, UOM Conversion, and Copy Line when executed upon an empty line.
		I2307260	When the new manual mat req update preference is enabled, users will no longer be asked to update mat req when saving a sales order with existing mat req.
		I2404271	The standard or running balance inventory level indicators will now appear on approved sales order lines that have not been shipped or invoiced.
		I2409202	The sales order form can now support custom invoice generation add-ons.
		I2411182	SetChanged will be bypassed for non-editable DropShipment checkbox clicks.
		I2409160	Sales order will no longer display a transaction message when launching the grid user defined form and refreshing search at the same time.
		I2503187	Re-implemented the feature to reload the selected sales order upon returning to the Sales Order module from Dbox configurator

#### Seradex.Win.Search.dll

6.4.112	04/09/2025	I2411010	When right-clicking on a cell, it will now be activated prior to non-standard Search context menus being displayed.
		I2409164	On close, search memory cleanup has been adjusted to prevent an error that can appear in the Infragistics grid.

#### Seradex.Win.ServiceOrder.dll

6.4.27	04/09/2025	I2501287	Service Order documents launched from search will again launch the custom service order module if it exists and is set up correctly.
		I2307071	Updated for compatibility with the latest DocumentStorage control.

#### Seradex.Win.Shipping.dll

6.4.58	04/09/2025	I2410170	Added Report User Access handling into the Shipping form.
		I2307071	Enhanced to allow DocumentStorage to use SQL FileTable when enabled.
		I2409202	The shipping form can now support custom invoice generation and deletion add-ons.
		I2410216	Corrected the form's line right-click behaviour with respect to Item Running Balance, UOM Conversion, and Copy Line when executed upon an empty line.

#### Seradex.Win.ShopFloorExecution.dll

6.4.72	04/09/2025	I2307071	Enhanced to allow DocumentStorage to use SQL FileTable when enabled.
--------	------------	----------	--

#### Seradex.Win.UserDefinedPropertyMaintenance.dll

6.4.32	04/09/2025	I2410120	Updated UserDefinedPropMaintSystem to validate UserDefinedModulePropertiies data and to prompt the user to check for unique records, and ensure that properties are selected for all rows before saving.
--------	------------	----------	--

#### Seradex.Win.WorkOrder.dll

6.4.60	01/29/2025	I2501317	The line Description field will no longer be read-only for consolidated and sub-work orders.
6.4.61	04/09/2025	I2501108	Modified to add some logic to temporarily block updates to grouped child work orders and their parents until this complex changes can be properly supported.
		I2307071	Enhanced to allow DocumentStorage to use SQL FileTable when enabled.
		I2411297	Work Order form system classes will no longer be shared amongst all loaded instances of the Work Order form.
		I2410170	Added Report User Access handling into the Work Order form.
		I2410216	Corrected the form's line right-click behaviour with respect to Item Running Balance, UOM Conversion, and Copy Line when executed upon an empty line.
		I2307260	When the new manual mat req update preference is enabled, users will no longer be asked to update mat req when saving a work order with existing mat req.

#### ServiceOrder.dll

6.4.83	04/09/2025	I2307071	Enhanced to allow DocumentStorage to use SQL FileTable when enabled.
--------	------------	----------	--

#### Shipping Log.trdp

6.4.0	04/09/2025	I2411097	Converted Shipping Log to Telerik.
-------	------------	----------	------------------------------------

#### Shipping.dll

6.4.182	04/09/2025	I2307071	Enhanced to allow DocumentStorage to use SQL FileTable when enabled.
---------	------------	----------	--

#### SpecBuilder.dll

6.4.51	04/09/2025	I2307071	Enhanced to allow DocumentStorage to use SQL FileTable when enabled.
		I2501108	Modified to include the logic that allows recreating the specs for the parent work order lines when the grouped child work orders are created or fully/partially deleted so that the labour schedule can reflect those changes.

#### sxEDIBridge.dll

6.4.70	04/09/2025	I2407304	Add ability to send emails after EDI file generation based on setup in the ModuleSetup table.
--------	------------	----------	---

#### sxMaintenance.dll

6.4.161	04/09/2025	I2411285	Contacts without contact links will now appear in the Contact Maintenance lookup.
		I2410165	The save routine for a contact will be consistent if there exist any contacts in the database with the same email address.

#### sxMaintenanceControls.ocx

6.4.49	04/09/2025	I2310043	Added a preference to enable removing invalid printer registry entries when printing some reports.
		I2411005	The maximum precision for any form's quantity or price values will now be ten digits.
		I2307071	Enhanced to allow DocumentStorage to use SQL FileTable when enabled.

#### Template.xls

6.4.19	04/09/2025	I2408120	Added a new field in cell J53 to hold the temp table name used for Parent Child Shared Data auto processing when child Boms are used as sub assemblies in configurator setup. Cell J54 also holds the row number of the line item in the temp table. Please note that the field UseBomsAsSubAssemblies must be True to enable this feature.
--------	------------	----------	---

#### Tooling.dll

6.4.25	04/09/2025	I2307071	Enhanced to allow DocumentStorage to use SQL FileTable when enabled.
--------	------------	----------	--

#### Transfer Log Report.trdp

6.4.0	04/09/2025	I2411097	Converted Transfer Log Report to Telerik.
-------	------------	----------	---

#### UOM Conversion Report.trdp

6.4.0	04/09/2025	I2411097	Converted UOM Conversion Report to Telerik.
-------	------------	----------	---

#### WebSFE BinShare.zip

6.4.4	04/09/2025	I2402210	<p>The Employees dropdown in Web Shop Floor will now only load the currently active employees.</p> <p>Fixed an issue where the website would reload the data in the main grid multiple times per action on certain actions.</p>
-------	------------	----------	---

#### WebSFE Pages.zip

6.4.3	04/09/2025	I2402210	Fixed an issue where the attachments page was not referencing the correct version of Infragistics.

#### WorkOrder.dll

6.4.242	04/09/2025	I2307071	Enhanced to allow DocumentStorage to use SQL FileTable when enabled.
		I2501108	Modified to make the necessary changes to the work order completion process when dealing with grouped child work orders and their parents to implement the changes to the WorkOrderGroupConsolidationMapping table.
		I2405045	Generating mat req will now log the BOM description and user defined values associated with demand.
		I2411109	WorkOrder forms will no longer duplicate the lines' documents when copying work orders.
		I2408227	Modified to add a new validation for detecting missing Category Item GL accounts prior to evaporating the BOM components during the work order completion process.
		I2307260	When the new manual mat req update preference is enabled, users will no longer be asked to update mat req when saving a work order with existing mat req.
		I2407185	Removing a work order from a job will also remove its immediate sub-work orders from that job.
