

Seradex OrderStream

Technical Release Notes

April 2026

ActiveM20.dll

6.4.166	04/15/2026	I2602076	Adjusted allocation logic to ignore tag and key data if they are not in use.
		I2512075	Modified the Credit Note unapproval validation to require that no inventory audit trail records changing the quantity of inventory exist. Also corrected the code obtaining the financials system being used, as this has a bearing on the validation query.
		I2603017	The application of group setup in the Admin Tools > Transaction Override form will no longer fail for databases using Job Billing.
		I2603030	In the Admin Tools > Transaction Override form, when a different transaction type is selected, it will show or hide the action control (i.e. Unapprove or Change Number) according to any secured controls applied against them in Group Setup.

AdminTools.dll

6.4.83	03/11/2026	I2603124	Improvements were made to the update system to enhance overall consistency.
--------	------------	----------	---

ClientReports.dll

6.4.116	04/15/2026	I2505174	Multiple Telerik report attachments can now be added to a single email with a multi report setup.
---------	------------	----------	---

Config.dll

6.4.256	03/06/2026	I2603054	Corrected an issue in Configurator Setup that was throwing an error message when you attempt to add and save a new product line
6.4.257	04/15/2026	I2601178	Updated LAN configurator excel filtering to properly set the initial excel filtering default values when starting a new configuration
		I2512097	Implemented a feature to clear Dbox product line cache when a product line is copied in configurator setup
		I2501300	The configurator drop-down box auto complete will now run when focus is set to the next control, allowing data to be entered more quickly.
		I2601021	Added a new feature in LAN configurators to run InitialDataImport after the ItemSpecID is written to the Input worksheet during initial load of a line item configuration. Also included a new config mode of -1 which means loading a new configuration
		I2603177	Corrected an issue in the LAN configurator that ignores loading excel default values when loading a new configuration.
		I2603127	Corrected an issue in LAN configurator that incorrectly updates the selected excel property values with the excel initial defaults when saving a configuration

Seradex OrderStream

Technical Release Notes

April 2026

6.4.257 04/15/2026 I2511069

Updated the named range creation and update feature to properly handle and report error messaging when Excel tables are used in Initial or Runtime Data Imports instead of named ranges. Seradex configurator does not support Excel table creation and update in both Initial and Runtime data imports.

Updated to include the stock quantity of the item being configured when calculating the unit cost of the line item being processed.

DataTransfer.mdb

6.4.335 03/19/2026 I2603192

The Item BOM Change search has been repaired. The form will no longer display an error message when accessed.

6.4.336 04/15/2026 I2507102

Added support for the new Sales order Due date and header/detail user status update module.

I2603172

Add or correct the Estimating, SalesOrder, and Invoice forms' SecuredControls records to lock the Unit List Price column.

I2603072

Corrected a handful of core reports whose dialog setup became incorrect now that the SQL helper functions were no longer in use.

I2603142

The query behind the Inventory - Valuation by Category core report was modified to be more intuitive.

I2604011

Added security settings to ensure the View Sheet/View Range/Upload Sheet buttons on the Web Configurator are only accessible by Web Admins by default

I2409013

Added the Material Requisition core searches and supporting view.

I2602076

New core view sx_WorkOrderLotSerial_Tag_Keys to show by WorkOrderLotSerial Record the tag and key.

I2601170

Rationalized the module for several hundred integrity checks.

I2508162

A new start date field has been added to workflow. User defined properties can now be assigned to workflows.

I2509255

Modified to allow adjusting the DueDate of a split within Scheduling.

I2601233

Updated the SQLBuildActions system data.

I2407092

Add new Buy-Stock MRP search to power the new Buy-Stock MRP form.

Added new Search Custom Format for the MRP Lookups.

I2509169

Added a new IsAcknowledged column to the ErrorLogs so that the user can acknowledge when an error has been already displayed.

I2603017

A record in SecuredControls for the ability to enable unapproval of DescriptionOfWork documents was added.

I2602249

The database column holding the FileAttachment value associated with a comment will be increased to 500 characters, to accommodate lengthier values used in OneDrive and SharePoint.

DBox Web Front End Components (WFE)

6.4.54 03/13/2026 I2603114

Fixed issue with alerts when saving a configurator after changing a property that doesn't require processing.

I2603165

Edit button now appears above 'Folder' Web Categories in the "Setup Display Categories" page.

6.4.55 03/17/2026 I2603082

Fixed issue with "Allow Special" for web configurator dropdown properties

Seradex OrderStream

Technical Release Notes

April 2026

6.4.56	04/15/2026	I2604011	Made the View Sheet/View Range/Upload Sheet buttons on the Web Configurator only accessible by Web Admins by default, or when launched via OrderStream Desktop
		I2604094	Corrected an issue where date filters on Searches in the DBOX interface would cause the results to not render.
		I2601232	Added Ship To controls to DBOX CRM.
		I2602206	Removed Cancel button from Web Configurator's "Add Configurator" dialog. Fixed UI issues with config type ID 5
ERP Anywhere			
6.4.13	04/15/2026	I2603216	Fixed slow down when exiting the container module. Fixed issue when RackBinLocations had no bins or racks
Inventory - Valuation by Category.trdp			
6.4.4	04/15/2026	I2603142	The report file was modified to accommodate changes to the underlying query, including modifying column widths to reflect the new data.
InventoryAdjustment.dll			
6.4.118	03/13/2026	I2603164	Corrected the query used to populate the temp table used to load the inventory adjustment details on importing a physical inventory spreadsheet.
InventoryTransfer.dll			
6.4.142	04/15/2026	I2603096	The posting logic for inventory transfers has been modified so that a transfer is no longer automatically unapproved when a failure occurs during processing by the Inventory Batch Processor.
ItemEditor.dll			
6.4.178	04/15/2026	I2602130	Saving an item which is non-sell or discontinued will cause its related WebCategoryItems record to be deleted if it exists, removing it from consideration in DBOX.
		I2601134	Enhanced to support assigning a specific ProductLine to Sell□Make components used within designated Microvellum import products.
JobCosting.dll			
6.4.119	04/15/2026	I2508162	The .Net workflow control has been added to the job costing form.
MatReq.dll			
6.4.165	04/15/2026	I2409013	Modified to add an external procedure to be able to launch the "Add Line To Existing PO" user interface.

Seradex OrderStream

Technical Release Notes

April 2026

6.4.165 04/15/2026 I2407092

Added handling for launching the new .Net MatReq module.
Added public method to generate Mat Req for subcontract subcomponents.

Seradex.AppBox.exe

6.4.25 04/15/2026 I2505239

Closing the GL Account lookup from AppBox with a financials module activation will no longer prevent AppBox from being closed.

Seradex.BaseSystem.dll

6.4.73 04/15/2026 I2603106

Created internal extensions and helper functions for data rows to allow internal developers to more easily obtain original vs proposed column values and a generic read to return a column value in any data type you want.

Seradex.CommonServices.dll

6.4.102 04/15/2026 I2407092
I2508162

Added handling of the new activation for the .Net MatReq/MRP modules.
An access point to user defined system functionality has been added for Seradex controls.

Seradex.Connection.dll

6.4.61 04/15/2026 I2507048
I2407092

When opening Inventory Transfer on WO Demand, a collate error will no longer appear when there is a mismatch between the ActiveM and tempdb databases.
Modified helper method for building UserDefined SQL strings.

Seradex.Dbox.dll

6.4.57 03/09/2026 I2603065
6.4.58 03/17/2026 I2603082
6.4.59 04/15/2026 I2604044
I2511069

Corrected an issue where the Tax Sub Reports would not load data and render properly in DBOX with the new version of Telerik
Fixed issue with "Allow Special" for web configurator dropdown properties
Corrected an issue where the SQL Connection would not be opened in time when rendering core Telerik reports in DBOX.
Modified the serialization of the DBOX Base Configurator to not serialize computed properties to reduce processing time when loading/processing/saving a configuration for a large product line.

Seradex.EstimateSystem.dll

6.4.56 04/15/2026 I2508162
I2601134

Updated for compatibility with advanced workflow.
Updated to consistently calculate and maintain correct LineNo values when generating or managing subline entries.

Seradex.Financials.FinancialsSystem.dll

Seradex OrderStream

Technical Release Notes

April 2026

6.4.146	04/15/2026	I2603032	Ensure deletion log is recorded for All AR payment deletes not just those when you delete a deposit or other wise remove a deposit line. Also ensure the delete is in a proper transaction scope to prevent database issues from leaving partial deleted data.
		I2512188	Improved the delete logic for GL entries as well as when deleting AP related bank transactions to allow the delete to go through even if save validation would fail.
		I2603137	Improved Avalara error handling to provide clearer messages for credential issues related to correct user name but incorrect password (portal password changed) and to display full API error details when the API returns any errors.
		I2603106	Updated bank and GL logic to use the new data row extensions
		I2601002	Added logic on quick deposit/manual payments/cheques and fund transfers to check the GL entry upon save to ensure there are no issues with foreign currency and also for quick deposits and payments, default the currency to match the GL when adding and ensure if it is back dated that the historical exchange rate is used.

Seradex.Infragistics.dll

6.4.80	04/15/2026	I2603094	Add ability to the WinGrid control to determine if the vertical scroll bar is visible, as well as the vertical scroll bar width.
		I2407092	Improved internal usability of loading the Vendor combo control.
		I2508162	Data entry validation can now be performed on workflow user defined properties.

Seradex.Library.dll

6.4.44	04/15/2026	I2508162	A new Start Date field has been added to workflow.
		I2507102	Added support for the new Sales order Due date and header/detail user status update module.

Seradex.ProductConfigurator.dll

6.4.33	04/15/2026	I2511069	Corrected an issue in Aspose auto processor that causes an Invalid Column Name when calculating the maximum number of userdefined fields required when the [Store BOM UserDefined Fields] in the input worksheet is set to 2.
			Updated the named range creation and update feature to properly handle and report error messaging when Excel tables are used in Initial or Runtime Data Imports instead of named ranges. Seradex configurator does not support Excel table creation and update in both Initial and Runtime data imports.
			Updated to pass the Stock Quantity of the item being configured to Config.dll for accurate unit cost calculation of the line item.
		I2603026	Corrected an issue in the configurator bill of materials rollup feature to correctly include the appropriate table column names when creating the rollup temp table and there are not records available yet.

Seradex OrderStream

Technical Release Notes

April 2026

6.4.33 04/15/2026 I2602250

Corrected an issue in Aspose auto processor to write empty cell values with NULL values as it does in Dbox for consistent formula evaluations

Seradex.Production.Calendar.dll

6.4.24 04/15/2026 I2507102

Added support for the new Sales order Due date and header/detail user status update module.

Seradex.Production.DataCollection.dll

6.4.86 04/15/2026 I2603075

API Mode now supports Generate Personal Key for ContainerNo on Work Order Line completion

Seradex.Production.QualityAssurance.dll

6.4.14 03/26/2026 I2603263

Corrected the QC detection query, which is called when a potentially related document is deleted.

Seradex.Production.WorkFlowSystem.dll

6.4.14 04/15/2026 I2508162

A new start date field has been added to workflow.

Seradex.Production.WorkOrder.dll

6.4.64 04/15/2026 I2602177

Modified to add an extra validation to the GenerateWorkOrders function used by the API to ensure that the Location incoming value is only used when it differs from the default and is a valid value.

I2602193

If a completed work order has new lines added to it, the Completed flag will be set back to False.

I2508162

Updated for compatibility with advanced workflow.

Seradex.Purchasing.dll

6.4.56 04/15/2026 I2602174

The user will now be confronted with a helpful message when attempting to add an item to a PO which is missing a necessary UOM conversion.

Seradex.Purchasing.MatReq.dll

6.4.10 04/15/2026 I2409013

Added the supporting logic for the Material Requisition module.

I2407092

Added functionality to facilitate Buy-Stock MRP form behaviour.

Enhanced WO MRP messaging.

Seradex.RestApi.dll

6.4.49 03/09/2026 I2603075

Updated the DBOXNugetPackage to support the Generate Personal Key option from the Seradex.Production.DataCollection.dll

Seradex OrderStream

Technical Release Notes

April 2026

6.4.49	03/09/2026	I2603065	Corrected an issue where the Tax Sub Reports would not load data and render properly in DBOX with the new version of Telerik
6.4.50	03/23/2026	I2603216	Container transfers now supports moving multiple serial tracked items at a time.
6.4.51	04/15/2026	I2511069	Modified the serialization of the DBOX Base Configurator to not serialize computed properties to reduce processing time when loading/processing/saving a configuration for a large product line.
		I2601232	Added ShipVia and FOB support to DBOX CRM
Seradex.SalesOrderSystem.dll			
6.4.67	04/15/2026	I2508162	Updated for compatibility with advanced workflow.
		I2507102	Added support for the new Sales order Due date and header/detail user status update module.
Seradex.Search.dll			
6.4.102	04/15/2026	I2407092	Added ability to specify Search custom formats programmatically.
		I2601233	Modified to provide access to the full table and column list with datatypes for SQL Build Actions in the Search Base Query setup form.
Seradex.Shipping.dll			
6.4.45	04/15/2026	I2508162	Updated for compatibility with advanced workflow.
Seradex.SpecBuilder.dll			
6.4.19	04/15/2026	I2601233	Modified for internal system processes.
Seradex.SQLBuildActions.dll			
6.4.5	04/15/2026	I2601233	Modified to provide access to the full table and column list with datatypes for SQL Build Actions in the Search Base Query setup form.
Seradex.Strings.dll			
6.4.64	04/15/2026	I2509169	Added a new enumeration value: DisableAutoRetryOnFailureForInvBatchProcessor for the new application preference that will allow the user to disable the auto-retry mode for the Inventory Batch Processor.
		I2409013	Modified to add the Material Requisition Search launching source to the enumeration.
		I2508162	A workflow module is now available to setup workflow user defined properties.
		I2407092	Added new Search Launch Source enum records, MRP modes, and MatReq modes.

Seradex OrderStream

Technical Release Notes

April 2026

Seradex.UserDefined.dll

6.4.30	04/15/2026	I2601134	Added a validation in the transaction detail user defined logic to prevent errors when no detail level user defined fields are set up for a particular transaction module.
		I2508162	User defined properties can now appear on workflows through a module activation.

Seradex.Utilities.BatchTransactionProcessor.exe

6.4.7	04/15/2026	I2603096	Modified to correct an issue where the returned error message was containing single quotes that were not properly handled before the error logging query was executed when using the new auto-retry functionality.
		I2509169	Modified to implement the new default logic that allows the Processor to auto retry failed operations and also to pay attention to the new application preference: "Disable Auto-Retry On Failure For Inventory Batch Processor" that retains the old functionality. Note that the new functionality now logs the errors in the ErrorLogs table whereas the old one was logging them in the same BatchTransactions table.

Seradex.Utilities.IntegrationMgrSystem.dll

6.4.52	04/15/2026	I2603190	Improve error logging handling of the Name field in the AppIntegrationBase object.
		I2601134	Modified the split line processing logic to ensure that parent-child line relationships are always established accurately.

Seradex.Utilities.UserDefinedPropMaintSystem.dll

6.4.18	04/15/2026	I2508162	User defined properties can now be assigned to workflows.
--------	------------	----------	---

Seradex.Win.BatchProcessor.dll

6.4.33	04/15/2026	I2603179	Generating multiple new sales orders from multiple estimates will now validate and proceed correctly.
--------	------------	----------	---

Seradex.Win.BatchTransactionProcessorSetup.dll

6.4.3	04/15/2026	I2509169	Modified the functionality to pay attention to the new application preference: "Disable Auto-Retry On Failure For Inventory Batch Processor" and the new default logic that allows the Processor to auto retry failed operations.
-------	------------	----------	---

Seradex.Win.Controls.dll

6.4.62	04/15/2026	I2602249	It is now possible to insert a value into the header Comments control's FileAttachment field by typing or pasting a value, rather than just by double-clicking and selecting a file.
--------	------------	----------	--

Seradex OrderStream

Technical Release Notes

April 2026

6.4.62	04/15/2026	I2508162	Advanced workflow functionality is now available through a module activation.
Seradex.Win.Email.dll			
6.4.5	04/15/2026	I2505174	The OrderStream email preview window now allocates more horizontal space for email attachments.
Seradex.Win.Estimate.dll			
6.4.74	04/15/2026	I2508162	The estimate form has been updated for compatibility with advanced workflow.
		I2602110	Hide ysnOverrideTax without exception when loading the Estimating form.
Seradex.Win.Financials.dll			
6.4.148	04/15/2026	I2603032	Allow users to approve receive undeposited AR payments if somehow the initial post failed when generated from day end/invoice approval and prevent users from pressing delete when getting into the AR payment for a deposit from search or the Receive Payment menu.
		I2603031	Improved delete functionality for batches and entries within batches.
		I2601002	Added logic on quick deposit/manual payments/cheques and fund transfers to check the GL entry upon save to ensure there are no issues with foreign currency and also for quick deposits and payments, default the currency to match the GL when adding and ensure if it is back dated that the historical exchange rate is used.
		I2603110	Ensure that when taking a deposit from an Invoice and you are setup with undeposited GL and payment information is specified, ensure the resultant AR payment for that invoice is also dated the same as the invoice.
Seradex.Win.Invoice.dll			
6.4.78	04/15/2026	I2508162	The invoice form has been updated for compatibility with advanced workflow.
		I2512075	Modified the line deletion validation to permit deletion if the line has had no inventory audit trail involvement changing the quantity of inventory.
		I2601039	Grid columns will now have their read-only setting set in the form's grid initialization using a more advanced and non-overrideable method, rather than setting the related property to be read-only.
Seradex.Win.MaintenanceTools.dll			
6.4.32	03/11/2026	I2603124	Improvements were made to the update system to enhance overall consistency.
Seradex.Win.MatReq.dll			
6.4.9	04/15/2026	I2409013	Added a new Search based user interface for the Material Requisition

Seradex OrderStream

Technical Release Notes

April 2026

6.4.9 04/15/2026 I2407092

Added Buy-Stock MRP mode handling to the MRP form.
Enhanced WO MRP messaging.

Seradex.Win.NonConformanceManager.dll

6.4.37 04/15/2026 I2508162

The non-conformance form has been updated for compatibility with advanced workflow.

Seradex.Win.Purchasing.dll

6.4.95 04/15/2026 I2508162

The purchase order form has been updated for compatibility with advanced workflow.

I2601039

Grid columns will now have their read-only setting set in the form's grid initialization using a more advanced and non-overrideable method, rather than setting the related property to be read-only.

I2602174

The user will now be confronted with a helpful message when attempting to add an item to a PO which is missing a necessary UOM conversion.

I2407092

Added informative messaging for the new version of MRP, that the new MRP form cannot use a custom search that was made for the old MRP form.

Seradex.Win.Receiving.dll

6.4.78 04/15/2026 I2601039

Grid columns will now have their read-only setting set in the form's grid initialization using a more advanced and non-overrideable method, rather than setting the related property to be read-only.

Seradex.Win.SalesOrder.dll

6.4.81 04/15/2026 I2508162

The sales order form has been updated for compatibility with advanced workflow.

I2504051

With the "Default SO Contact to Ship To Contact" application preference enabled, editing a customer ship to's contact will now update the contact on the sales order form.

I2507102

Added support for the new Sales order Due date and header/detail user status update module.

Seradex.Win.Search.dll

6.4.119 04/15/2026 I2603094

Ensure that if the vertical scroll bar is visible in the Search data grid, the last column in the filter grid will be resized accordingly.

I2407092

Improved usability of editable searches, to allow for generic Include field naming.

I2409013

Modified the right-click menu logic so that the "Include All" and "Exclude All" actions work based on the data currently displayed in the grid rather than on the underlying bound dataset.

I2601233

Modified the Search Base Query setup form to provide access to the full table and column list with datatypes for SQL Build Actions.

Seradex OrderStream

Technical Release Notes

April 2026

Seradex.Win.ServiceOrder.dll

6.4.33 04/15/2026 I2508162 The service order form has been updated for compatibility with advanced workflow.

Seradex.Win.Shipping.dll

6.4.65 04/15/2026 I2508162 The shipping form has been updated for compatibility with advanced workflow.

Seradex.Win.Telerik.dll

6.4.35 03/10/2026 I2603101 Updated to explicitly apply Telerik license information to ensure components do not display a license watermark.

Seradex.Win.UserDefinedPropertyMaintenance.dll

6.4.33 04/15/2026 I2508162 User defined properties can now be assigned to workflows.

Seradex.Win.WorkFlow.dll

6.4.16 04/15/2026 I2508162 A new start date field has been added to workflow.

Seradex.Win.WorkOrder.dll

6.4.69 04/15/2026 I2508162 The work order form has been updated for compatibility with advanced workflow.

SeradexFile-Parent

6.4.0 04/07/2026 I2604037 Modified for easier use and to show user license count.

sxLicense.exe

6.4.32 04/06/2026 I2603296 Updated to use the correct User License Count in the license.

sxMaintenance.dll

6.4.164 04/15/2026 I2509169 Modified to add a new application preference: "Disable Auto-Retry On Failure For Inventory Batch Processor".

sxMaintenanceControls.ocx

Seradex OrderStream

Technical Release Notes

April 2026

6.4.56 04/15/2026 I2509169 Modified to add a new application preference: "Disable Auto-Retry On Failure For Inventory Batch Processor".

WorkOrder.dll

6.4.255 04/15/2026 I2511022 The work order completion form will now show maximized, and the completion date column is now closer to the quantity completed column.
