

Seradex OrderStream

Technical Release Notes

February 2023

ActiveM20.dll

6.4.148	01/04/2023	I2211036	When launched from Inventory transfer, ensure that inventory in Consignment locations is only selectable when the transfer line is also a Consignment location.
---------	------------	----------	---

ActivityLog.ocx

6.4.37	02/13/2023	I2206283	Added validation to the Completion operation as well.
		I2212137	Correct case change to ensure consistency across all related ActivityLog libraries.

AutomatedReports.exe

6.4.10	01/16/2023	I2301004	Corrected an issue introduced in the previous release of AutomatedReports regarding determining the next run time for hourly reports.
--------	------------	----------	---

Commissions.dll

6.4.24	02/13/2023	I2207063	Corrected an issue that causes a sales rep's commissions to be ignored when an ampersand appears in the Sales Rep Code for config commissions on the output tab
--------	------------	----------	---

Config.dll

6.4.201	01/19/2023	I2212237	Modified to use different temp table names when processing internally versus externally
---------	------------	----------	---

DataTransfer.mdb

6.4.301	12/05/2022	I2210025	Update Workflow Secured Controls to match new forms type.
6.4.302	01/16/2023	I2209070	The "Add Items To Order" button on the DBOX Sell Items page is now a different button whether you are modifying an Estimate or Sales Order. When modifying/creating an Estimate it will say "Add Items To Quote" and on a Sales Order it will continue to say "Add Items To Order".
		I2212226	Stripped a trailing slash from the ApiURL in AxisPreferences as a preventative action.
6.4.303	02/13/2023	I2209131	Added an Integrity Check to look for item master operations with no duration.
		I2207226	Added a new record for JobCosting in the TransactionTypes table.
		I2111152	Modified to support Integration Manager importing scrap percent with the bill of materials.
		I1805105	Added a numeric control type for user-defined.
		I2206114	Add new table, OwnerSubTypes, to track different owners within a singular OwnerType. Add ServiceOrderMaterial and Labour as OwnerSubTypes. Add new Creator fields to ReceivingDetails.
		I2103095	Modified some Integrity Check queries and also added some synchronization queries.

Seradex OrderStream

Technical Release Notes

February 2023

6.4.303	02/13/2023	I2205253	Added a new core search query for the "Work Order Generator" (.NET version). Added a new view to support the search query: WGeneratorSelectedLinesTemp
		I2209062	Add new Opportunity module, Opportunity Form search launch source, and new Opportunity Search profile node.
		I2210100	Removed Foreign Key constraint on SalesOrderLotSerialInventory for ShippingDetailID and indexed ShippingDetailID on ShippingLotSerial table, dramatically improving delete for databases with large amounts of data in SalesOrderLotSerialInventory table.
		I2211282	Modified a pair of secured controls records to work correctly with .Net forms.
		I2210150	Changed integrity check solution to contact seradex for 'Inventory Present with non stock UOM'
		I2210064	Corrected issue with integrity check "Financials - Prior year not closed in the past 9 months", reporting a failure if the prior year was closed but the current date is 10 or more months from that last year end.
		I2207176	Add integrity check for blank category Description short and a Integrity fixes to remove these records
		I2206263	Added a new search launch source: "Shop Floor Execution Extra Search" for the Shop Floor Execution module to be able to run additional searches.
		I2211288	Added Seradex.Win.WorkOrder.dll to the version dll list
		I2210185	Added timestamp data field and other necessary fields including employee and user information for authentication in Dbox to the WebRequests table
		I2212249	Adjusted DivisionalSellItems view to only return records if there is at least one active division setup in the data.

DayEndProc.dll

6.4.161	12/16/2022	I2212185	Corrected issue for Financials clients who split tax on the GL level between AR and AP.
6.4.162	02/13/2023	I2211058	Adjusted the Sage 50 UK AR Import to pass in the customer PO vs the line item description and only on the first line of a given invoice.
		I2209215	Adjusted Sage 50 UK AR posting to handle AR credit notes.
		I2210037	Corrected issue if the total number of unique tax authorities (with tax amounts) on a given document exceeds 10
		I2208082	Corrected issue when using Actual vs Standard as your costing method,elect as well to include labour in your cost.

DBox Web Front End Components (WFE)

6.4.37	01/16/2023	I2208184	If a Sales Order has an SOSStatus of cancelled (6) it will now show a message at the top of the page saying that it has been cancelled and can no longer be modified. If a Sales Order Detail has an SOSStatus of cancelled, or the header has an SOSStatus of cancelled the line items that have been cancelled (or all) will no longer have the options to edit/delete them.
--------	------------	----------	---

Seradex OrderStream

Technical Release Notes

February 2023

6.4.37	01/16/2023	I2209070	The "Add Items To Order" button on the DBOX Sell Items page is now a different button whether you are modifying an Estimate or Sales Order. When modifying/creating an Estimate it will say "Add Items To Quote" and on a Sales Order it will continue to say "Add Items To Order".
		I2209072	Modified the "Register" button on the login page to be a blue link, like the Forgot Password link, rather than trying to match the company theme, since blue is generally associated with being a link.
		I2210033	Fixed an issue where the code would pop up a bunch of errors in the console when a custom column on the Sell Item search grid contained a null value/empty string.
		I2210220	Added support to optionally have the Configure and Item/Add Item menu be always expanded on non-closed orders/quotes.
		I2212201	Corrected an issue where Activities in DBOX would fail to save the linked transaction information.
		I2301139	Fixed an issue where DBOX would try to load a deleted Estimate/Sales Order when cancelling configuration on a blank Estimate/SO.
		I2201010	When the user clicks the back button in the Sell Items page (not the browser back button, the one in the). If the estimate/sales order has no lines it will delete the estimate/sales order.

Estimating.dll

6.4.196	02/13/2023	I2209043	The date created and modified are now read from the database to track changes in a multi-user environment.
---------	------------	----------	--

EventAlert.exe

6.4.22	01/16/2023	I2301004	Corrected issues introduced in the previous release of EventAlert for loading alerts, and determining the next run time for hourly based alerts.
--------	------------	----------	--

History.dll

6.4.48	02/13/2023	I2209062	Allow the Search form to be loaded against the Opportunity module from the Profile Bar.
--------	------------	----------	---

IntegrityCheck.dll

6.4.25	02/13/2023	I2103095	Modified to dynamically set the system database for synchronization queries that link to it.
--------	------------	----------	--

InventoryTransfer.dll

6.4.118	12/09/2022	I2212113	Corrected issue with transfer generation for places such as Shop floor where unallocated inventory records are greater or equal to 1000 and allocation to the transfer lot serial is required.
6.4.119	01/05/2023	I2211036	Added Approval validation to ensure that all inventory selected through the Inventory Details form is in a location whose Consignment flag matches the related transfer line's location.

Seradex OrderStream

Technical Release Notes

February 2023

6.4.120	02/13/2023	I2209293	Transfer generator/non conformance will load user defined data regardless of what is setup for the labels used in the transfer sub inventory form. Plus adjusted the negative check to pay attention to details already marked as inventory updated to ensure they do not affect the negative check.
		I2209108	No longer hide columns such as user defined upon initial load and prevent issues if transfer generator is reached from work order.
		I2206356	Fix selecting a rack with an apostrophe in ItemsTransfer module
Invoice.dll			
6.4.186	02/13/2023	I2211162	Invoice lines generated from miscellaneous shipping lines will now be generated with default values instead of NULL for the fields that would normally come from the sales order line.
		I2207197	Added logic to prevent issues in case approval fails for whatever reason after the invoice is marked approved in the database but the rest of the approval logic did not complete.
		I2301122	Added an additional call to determine if the DropShipment module is activated, so .Net calls will have this value accurately set.
ItemEditor.dll			
6.4.159	02/13/2023	I2204200	Modified to not immediately update the work order line spec when dealing with a consolidated line with sub work orders and making BOM changes via the Batch BOM Change tool.
		I2212071	UPC code generation now uses the genkey locking functionality to protect against multi-user generation issues. Validation was added to ensure that no more codes can be generated once the limit has been reached.
		I2209058	Sort item vendor history table by DateCreated DESC
JobCosting.dll			
6.4.104	02/13/2023	I2209062	Allow the Opportunity form access to the Search tab, to load Opportunity specific searches.
		I2201111	The type-ahead feature has been added to the estimate, sales order, and work order columns of the contract and change order grids in job costing.
		I2207226	Implemented multi comments entry by owner type in the Job costing module to be consistent with Dbox multi comments.
MicrovellumImport.dll			
6.4.34	02/13/2023	I2109322	Enhanced price update functionality to take the new Line Item Price Update preference into account.
POInvoice.dll			
6.4.132	02/13/2023	I2207197	Added logic to prevent issues in case approval fails for whatever reason after the invoice is marked approved in the database but the rest of the approval logic did not complete.

Seradex OrderStream

Technical Release Notes

February 2023

PurchaseOrder.dll

6.4.142 02/13/2023 I2209026 Add default true condition so empty lists do not return false as improper vendors

Receiving.dll

6.4.164 02/13/2023 I2208248 Corrected issue whereby two separate receipt for the same PO line are both returned on one VR and both also open up the PO qty.

ReleaseManager.exe

6.4.147 02/14/2023 I2211063 Release Manager has been modified to ensure that tickets returned to development are treated as completed when updating the Forecasted Release date.

RptDataCollection.dll

6.4.82 01/11/2023 I2211300 Adjust BOM Status temp table to no longer reference inventory in non-material locations

SalesOrder.dll

6.4.238 12/06/2022 I2212065 Corrected issue with generation of work order whereby the sales order number does not properly flow to the work order when using flow key through.

6.4.239 02/13/2023 I2209043 The date created is now read from the database to track changes in a multi-user environment.
I2108209 Copying a sales order no longer maintains link to an original estimate, if there is one

Seradex.AddressSystem.dll

6.4.10 12/06/2022 I2212078 Ensure the Prospect Name is displayed correctly in the Account combo.

6.4.11 02/13/2023 I2209041 Rebuild for Prospect Import.

Seradex.AppBox.exe

6.4.19 02/13/2023 I2209043 Updated the logic ensuring that the system will now allow multiple instances of the same module to be open in AppBox.

Seradex.Aspose.dll

6.4.3 02/13/2023 I2211289 Modified the references to Aspose.Cells to use nuget Package reference directly from Nuget instead of a local dll references

Seradex OrderStream

Technical Release Notes

February 2023

Seradex.BaseSystem.dll

6.4.57	12/21/2022	I2212215	Ensure that the correct custom reports CustomExe record is determined when the form's OwnerType and ModuleName are not the same.
6.4.58	02/13/2023	I2203293	Added extension method to determine if a column's datatype is an integer or non-integer number.
		I2002283	Add ReadOnly and Hidden properties to the sxTag class to promote persistence of Advanced Security settings.
		I2209252	Added internal methods to encapsulate common functionality for use elsewhere in the system.

Seradex.CommonServices.dll

6.4.76	12/09/2022	I2212136	Genkey incorrectly reports a lockout when a shipment is being used to generate a second or subsequent invoice for its related sales order and the SalesOrderNo is being used as the FlowKey.
6.4.77	12/22/2022	I2212209	Addressed an issue with interpreting activation codes on systems that use do not use the latin based code page 1252 for the system locale for non-unicode programs.
6.4.78	02/13/2023	I2212094	Added the ability to simplify freight details if preferred, treating all freight details as miscellaneous.
		I2202256	Added new UOM function call which leverages the core table function.
		I2209043	Added a new validation ensuring that the system will not save the transaction if the selected transaction modified date is different from the data modified date.
		I2109322	Added handling for the new Line Item Price Update preference.
		I2206114	Add functionality to gather OwnerSubTypes.
		I2209091	New Function for Transaction Log
		I2112172	When a search is part of multiple search modules for different employee groups, and an employee is part of multiple employee groups, the search will no longer appear multiple times.
		I2103188	Modified to be able to map one source field to more than one destination field when using the EDI file import functionality.

Seradex.Connection.dll

6.4.50	02/13/2023	I2210049	Created a new create temp table function ensuring the system doesn't use the connection variable to begin transaction. Also includes minor adjustments to some messages displayed when connection issues are encountered.
		I2210111	Added a new function to create temp table without using the connection object begin transaction.

Seradex.Dbox.dll

Seradex OrderStream

Technical Release Notes

February 2023

6.4.38	01/16/2023	I2210060	DBOX will no longer let you register Customer (Contact) users if they are linked to more than one active Customer. If a user somehow gets linked to multiple Customers after their account is created it will not let them login and tell them why.
		I2210033	Corrected an issue where filtering a search would fail for columns that don't have an Alias.
		I2209056	Documents uploaded to Amazon will now have any spaces in the file names replaced with the HTTP encoding for a space character "%20". This fixes an edge case for files that are uploaded that have a trailing or leading space in the file name.
		I2208184	DBOX will now check the SOSstatus of a Sales Order to determine if it can be modified.
		I2209288	Fixed an issue where the CoreAPI would not accept Gzip compressed requests for the configurator. Fixed an issue where the CoreAPI would error instead of using the default value when a null value was sent to a non-nullable field in the Json of a request.
		I2205261	Fixed an issue where DBOX would not re-calculate the pricing for sell items on a quote or order when the header was changed even when the "Reconfigure On Header Changes" option is enabled.
		I2212226	Fixed an issue causing Orderstream to be unable to communicate with DBOX on the DBOX Login tabs in Employee/Contact/Sales Rep Maintenance pages.
		I2212264	Modified the configurator API to evaluate query controlled properties setup with no where clauses as valid.
		I2210220	Added an AlwaysShowItemSelector option to the Application Settings for DBOX to opt-in to the ability to always have the add item/configure an item menu expanded/visible.
		I2211233	Fixed an issue where DBOX was assuming all Configurators had at least one Configurator Group. Fixed a null reference issue in the Data Import logic for the Configurator.
		I2301033	Corrected an issue where editing a stock item price or creating an estimate revision in Dbox throws the error: error, Object reference not set to an instance of an object
		I2201010	When the user clicks the back button in the Sell Items page (not the browser back button, the one in the webpage). If the estimate/sales order has no lines it will delete the estimate/sales order.
6.4.39	01/20/2023	I2301060	Reduced the size of the data returned for the Display Category management page by 95% to help fix an issue with data being too large for the browser and API to handle.
		I2301267	Fixed an issue causing the forgot password tokens to be unable to be validated, getting the user stuck in a loop of receiving invalid reset password tokens.
		I2301184	Fixed an issue where the code was incorrectly reading two different version numbers causing login issues if the version numbers were mismatched.
		I2301174	Fixed an issue where the code was assuming all invoice details must have an Item.

Seradex OrderStream

Technical Release Notes

February 2023

6.4.28	12/15/2022	I2212097	Added safety code to clear and rebind the CustAcctSet combo on reload after the Configurator form closes.
6.4.29	02/13/2023	I2212082	Corrected the logic calculating DiscountAmt to use ListPrice rather than UnitPrice.
		I2209043	The date created is now read from the database to track changes in a multi-user environment.
		I2210155	Corrected an issue when editing a transaction line item component in item editor. Returning to the transaction throws an exception on the RetailDiscountAmt field in Estimating and Sales Order transaction modules.
		I2212198	Corrected an issue that returned the customers account set instead of the account set on the estimate to an existing estimate transaction

Seradex.Financials.FinancialsSystem.dll

6.4.128	02/13/2023	I2206219	Adjusted to hide inactive Customers from most financial forms, the deposit will still show them if there is a balance owing still.
		I2104264	Altered Telpay and other CAD based imports to catch missing bank routing information on a vendor and inform the user and abort the file generation.
		I2212033	Corrected issue if the online tax system had the right group and rate but two or more Invoice details had a small adjustment required for the tax amount.
		I2210072	If the detail tax amount requires an update when approving a non credit invoice for online tax and the sales order line is for the invoice amount, update the sales order detail tax to match.

Seradex.Financials.TransactionPosting.dll

6.4.2	02/13/2023	I2209091	Added function to validate fiscal dates
		I2202256	Added support for Receiving/Vendor returns GL Posting.

Seradex.Infragistics.dll

6.4.59	02/13/2023	I2209212	Added support to loop through a grid in DataEntryValidation if that grid has been changed.
		I2210141	Increase the minimum width of the sxGrid control row headers to accommodate orders up to 9999 lines.
		I2106307	Columns that are hidden through Advanced Security will no longer be available to select in the Edit Column Layout grid dialog.
		I2002283	Add a grid level locking method to lock/unlock columns appropriately.
		I2203293	The Up and Down arrow keys will no longer modify the number value when editing a numeric cell. Enter will now move vertically within the grid. Navigating to a checkbox using the arrow keys will now allow spacebar to toggle the checkbox.
		I2211002	Corrected issue with Advanced security whereby subsequent checks for secured controls for the same form and module was gathering the list of controls from the database when it already had it.

Seradex.Inventory.Adjustment.dll

Seradex OrderStream

Technical Release Notes

February 2023

6.4.6	12/07/2022	I2212100	Ensure multiple inventory detail records for a Consignment Transfer are handled correctly.
6.4.7	02/13/2023	I2202256	Removed call to Com based auto posting as consignment adjustments now use the new Auto posting.
Seradex.Inventory.dll			
6.4.41	02/13/2023	I2202256	Updated to support receiving inventory update and ensured GL account functions and relieving negative/evaporate from a batch works.
		I2209091	Added logic to obtain qty on hand for an item/location combination
		I2206114	Add function to get Service Order Material lot-serial inventory records.
Seradex.Inventory.Transfer.dll			
6.4.5	02/13/2023	I2202256	Added Support for ERP Anywhere to generate consignment receipts
Seradex.InvoiceSystem.dll			
6.4.31	12/15/2022	I2209195	Modified to ensure that the unit discount amounts are properly rounded when generating an invoice from shipping.
6.4.32	02/13/2023	I2212195	Modified to ensure that the unit discount amounts are properly rounded when generating an invoice from salesorder.
		I2211162	Logic was added to permit the TotalTaxes of a miscellaneous Shipping line to be NULL when creating an invoice from the shipment.
		I2209212	Added support to loop through a grid in DataEntryValidation if that grid has been changed.
		I2301186	Corrected issue whereby deposit invoice/Job billiing items were added to invoices driving the invoice negative and not being adjusted to bring the total invoice to zero.
		I2212296	Modified to ensure that previous allocations are removed when an item is changed on a line.
Seradex.Library.dll			
6.4.28	02/13/2023	I2202256	Added Consignment Inventory to Location Objects
		I2111152	Modified to support Integration Manager importing scrap percent with the bill of materials.
Seradex.OrderEntry.dll			
6.4.21	02/13/2023	I2108104	Removed some unused SpecBuilder Objects in the Order System.
Seradex.OrderEntryLibrary.dll			
6.4.31	02/13/2023	I2109322	Overhauled the sales side price update functionality to be more consistent with the intended behaviour.

Seradex OrderStream

Technical Release Notes

February 2023

6.4.31	02/13/2023	I2210185	Implemented support for enabling the web configurator menu item for Dbox clients with advance configurator license and 3DConfig enabled in Order Stream
		I2212195	Modified to ensure that the correct rounding units are always used when calculating line discounts.
		I2212243	Altered item selection to not override the detail due date with the header unless application preference control logic calculates the date.

Seradex.ProductConfigurator.dll

6.4.13	02/13/2023	I2209085	A one-time re-processing of a processed line item configuration is now forced after checking for expected BOMs that do not exist
		I2211289	Modified the references to Aspose.Cells to use nuget Package reference directly from Nuget instead of a local dll references
		I2209161	As a second layer to ensure that the BOMs are created, or at least to bring the user's attention to this, auto processor will now check for empty bill of materials after each processing, and send an email out when there is no BOM after processing.
			A one-time re-processing of the line is forced to ensure the BOMs are created.
		I2108104	Converted the use of the old spec builder to the new spec builder in the .Net configurator and order entry systems

Seradex.Production.DataCollection.dll

6.4.65	02/13/2023	I2209184	Modified some of the queries that updates the loading data to significantly improve the speed of the loading process.
		I2210049	Adjusted the creation temp table call to use the new temp table creation function.
		I2210158	When completing work orders from Shop floor, when using a new container, the newly generated container number is not set for the next completion.
		I2206263	Modified to add the necessary logic to implement a new search tab on the main SFE form to display custom searches.
		I2211041	Modified a temp table's schema to handle a larger NextIDs value to prevent failures for unusually large labour schedules.

Seradex.Production.Scheduling.dll

6.4.88	02/13/2023	I2209131	Modified to treat operations that have no duration as having a one minute setup time to allow them to be included so they can be scheduled.
--------	------------	----------	---

Seradex.Production.WorkOrder.dll

6.4.42	02/13/2023	I2205308	Added validation to prevent creating a second WO line for a related SO line when the MatReqMultipleWOLineOneSoLine application preference is not enabled.
		I2205253	Modified to add the required logic for the new .NET "Work Order Generator".
		I2209016	Optimized the logic ensuring that the required time is reduced when loading and saving a work order transaction document.

Seradex OrderStream

Technical Release Notes

February 2023

6.4.42 02/13/2023 I2301200
I2209043

Corrected issue whereby Personal keys were not working.
The date created and modified are now read from the database to track changes in a multi-user environment.

Seradex.Purchasing.dll

6.4.36 02/13/2023 I2301200
I2301137
I2209212

I2005137

I2209091

Corrected issue whereby Personal keys were not working.
Corrected issue where copying a PO does not respect the divisional genkey.
Added support to loop through a grid in DataEntryValidation if that grid has been changed.
Adjusted PO to only allow negative unit prices on non tracked items and added logic to receipt to ensure negative tracked costed items if they happen to be on a PO to land at \$0
Updated logic to calculate PO header and detail status

Seradex.Purchasing.ReceivingSystem.dll

6.4.37 02/13/2023 I2209091
I2201199

I2103188

I2206114
I2005137

I2208248

I2202256
I2209043

I2203127

I2212239

Updated Receiving approval logic to not rely on the Com receiving dll
Ensure receipts against customers will ensure the cost is zero when inventory is updated.
Modified to be able to default the quantity received to one for serial items when no EDI mapping is specified for that field in the setup. Also, added logic to fail the import if the imported serial numbers already exist in the system.
Add handling of new Creator fields.
Adjusted PO to only allow negative unit prices on non tracked items and added logic to receipt to ensure negative tracked costed items if they happen to be on a PO to land at \$0
Corrected issue whereby two separate receipt for the same PO line are both returned on one VR and both also open up the PO qty.
Updated to remove inventory logic from vb6 works.
The date created and modified are now read from the database to track changes in a multi-user environment.
Altered GL validation on receipt to check the related PO detail for the GL vs the category default for the logic to prevent AR,AP and Banking GL from being used.
Added the feature that appropriately colors the receiving detail line for lot/serial tracked items in the receiving module.

Seradex.RestApi.dll

6.4.32 01/16/2023 I2301158
I2212226

6.4.33 01/20/2023 I2301267

Added back the token_type property to the authentication token.
Fixed an issue causing Orderstream to be unable to communicate with DBOX on the DBOX Login tabs in Employee/Contact/Sales Rep Maintenance pages.
Fixed an issue causing the forgot password tokens to be unable to be validated, getting the user stuck in a loop of receiving invalid reset password tokens.

Seradex OrderStream

Technical Release Notes

February 2023

6.4.33	01/20/2023	I2301060	Reduced the size of the data returned for the Display Category management page by 95% to help fix an issue with data being too large for the browser and API to handle.
		I2301174	Fixed an issue where the code was assuming all invoice details must have an Item.

Seradex.SalesOrderSystem.dll

6.4.36	12/22/2022	I2212233	When using MultiShip, the details will now be saved with the header CustomerShipToID and ShipTermID by default.
6.4.37	12/22/2022	I2212233	Set the Ship Terms and Ship Via of new details to the corresponding header values.
6.4.38	01/09/2023	I2301083	When copying a sales order, ensure the commissions are not duplicated.
6.4.39	01/16/2023	I2301200	Corrected issue whereby Personal keys were not working.
6.4.40	02/13/2023	I2212268	Improved the usability of the interaction between the header and detail Ship To fields.
		I2209043	The date created and modified are now read from the database to track changes in a multi-user environment.
		I2212082	Corrected the logic calculating DiscountAmt to use ListPrice rather than UnitPrice.
		I2210155	Corrected an issue when editing a transaction line item component in item editor. Returning to the transaction throws an exception on the RetailDiscountAmt field in Estimating and Sales Order transaction modules.
		I2104094	Added a validation step to warn users if - when MultiShip is enabled and the Options prompt is set - the related open shipment's line's CustomerShipTo values are different from the sales order's line's CustomerShipTo values.

Seradex.Search.dll

6.4.90	02/13/2023	I2201134	Search links on the search links setup form will now be sorted by the saved display order.
		I2211005	Populate show summary checkbox correctly when loading a saved search
		I2209252	Altered to ensure that when used by the designers, SQLBuildActions are only run when needed.

Seradex.ServiceOrderSystem.dll

6.4.10	02/13/2023	I2206114	Add handling of the new Creator fields for Receipt generation.
		I2209212	Added support to loop through a grid in DataEntryValidation if that grid has been changed.

Seradex.Shipping.dll

6.4.23	02/13/2023	I2111197	Can no longer generate shipments from blank orders
		I2211003	Altered the Ship all available logic so non stock items only see inventory that is available for the sales order line (or allocated to the shipping detail already).
		I2210100	Improved performance loading and deleting large shipments as well as creating a new shipment from a large sales order.

Seradex OrderStream

Technical Release Notes

February 2023

6.4.23	02/13/2023	I2109088	Prevent users from saving if the shipment ended up approved or inventory updated by another session between loading and saving.
		I2211002	Reduced the number of times secured controls is evaluated when performing actions such as ship all and ship all available.
		I2209043	The date created and modified are now read from the database to track changes in a multi-user environment.
		I2212094	Added the ability to simplify freight details if preferred, treating all freight details as miscellaneous.

Seradex.SpecBuilder.dll

6.4.8	01/13/2023	I2301101	Improved the speed of the validation logic in spec builder for large bombs.
-------	------------	----------	---

Seradex.SQLBuildActions.dll

6.4.1	02/13/2023	I2212164	Modified to eliminate a connection issue when the client's setup does not have an entry for the default runtime engine.
		I2209252	Altered to ensure that any temp tables that are created are kept alive as long as needed and cleaned up after. Addressed issues with the "buildtmpitemspecbomtables.net" and "buildtempitembomtables.net" actions.

Seradex.Strings.dll

6.4.51	02/13/2023	I2212094	Added the ability to simplify freight details if preferred, treating all freight details as miscellaneous.
		I2109322	Added a new Application Preference option, Line Item Price Update.
		I2206114	Add constant values for the new OwnerSubTypes.

Seradex.UserDefined.dll

6.4.16	02/13/2023	I2209139	Corrected an issue where the user-defined columns will error when saving a blank value.
		I1805105	Added support for numeric-only text box user-defined property.
		I2210071	Fix deleting the last remaining UserDefined

Seradex.Utilities.IntegrationMgrSystem.dll

6.4.28	02/13/2023	I2111152	Modified to support importing scrap percent with the bill of materials.
		I2212195	Modified to ensure that the correct rounding units are always used when calculating line discounts.

Seradex.Utilities.OrderImport.dll

6.4.32	02/13/2023	I2211084	Ensure that determining the detail ShipTo through EDI using the ShipToCode matches correctly on the related customer.
--------	------------	----------	---

Seradex OrderStream

Technical Release Notes

February 2023

Seradex.Win.AccountMergePurge.dll

6.4.11 02/13/2023 I2111055

Improved the performance of the matching algorithm and added logic to reduce false positives. Also corrected issues in the Matching form itself such as correcting launching CRM for prospects/suspects and issues related to addresses with missing state prov data and moving certain address fields from the left to the right.

Seradex.Win.BatchProcessor.dll

6.4.21 02/13/2023 I2210111

Adjusted the Advanced Sales Order Generation temp table creation logic to use the new SQL begin create temp table logic.

Seradex.Win.ConcurrentItemLookup.dll

6.4.9 02/13/2023 I2210106

Prevent adding non-digits to quantity box

Seradex.Win.Controls.dll

6.4.35 12/06/2022 I2212078

Ensure the Prospect Name is displayed correctly in the Account combo.

6.4.36 02/13/2023 I2209026

Allow selection of vendor with arrow keys for PO and set focus to vendor name on add

Seradex.Win.Estimate.dll

6.4.44 12/14/2022 I2210070

Corrected an issue where importing Microvellum data is not importing items correctly. The VB6 Microvellum import will now launch correctly from .Net Estimate.

6.4.45 12/15/2022 I2212097

Added safety code to clear and rebind the CustAcctSet combo on reload after the Configurator form closes.

6.4.46 02/13/2023 I2212198

Enabled the Save button to allow saving when a customer account set is changed in the estimate form.

I2212195

Modified to ensure that the correct rounding units are always used when calculating line discounts.

I2212137

Improve consistency of ActivityLog interop file usage.

I2002283

Use new grid locking features to allow columns to be unlocked when approved using Advanced Security.

I2209231

Ensure an account is selected prior to selecting items. Ensure an active detail is selected when attempting to perform context menu actions.

I2210057

Modified to correct a problem when reloading the ItemNo combo on the Estimate main grid.

I2108209

Estimate now prompts if you are sure you wish to copy

I2209043

Added a new validation ensuring that the system will not save the transaction if the selected transaction modified date is different from the data modified date.

I2109322

Enhanced price update functionality to take the new Line Item Price Update preference into account.

I2107256

Add 'On Hold' textbox to .Net estimate

Seradex OrderStream

Technical Release Notes

February 2023

6.4.46 02/13/2023 I2201181

When a customer or prospect is selected, users will now be notified if an inactive sales rep is assigned.

Seradex.Win.Financials.dll

6.4.126 02/13/2023 I2104264

Altered Telpay and other CAD based imports to catch missing bank routing information on a vendor and inform the user and abort the file generation.

I2206219

Adjusted to hide inactive Customers from most financial forms, the deposit will still show them if there is a balance owing still.

Seradex.Win.IntegrationManager.dll

6.4.19 02/13/2023 I2210028

Corrected an issue where the system will error out when launching the "Transaction BOM Import" from Sales Order or Estimate.

Seradex.Win.InventoryCosting.dll

6.4.9 02/13/2023 I2209203

Added Lot Serial No to Cost tracker.

Seradex.Win.InventoryTransfer.dll

6.4.32 02/13/2023 I2209108

No longer hide columns such as user defined upon initial load and prevent issues if transfer generator is reached from work order.

Seradex.Win.Invoice.dll

6.4.55 02/13/2023 I2209043

Added a new validation ensuring that the system will not save the transaction if the selected transaction modified date is different from the data modified date.

I2209212

Added support to loop through a grid in DataEntryValidation if that grid has been changed.

I2109322

Enhanced price update functionality to take the new Line Item Price Update preference into account.

I2002283

Use new grid locking features to allow columns to be unlocked when approved using Advanced Security.

I2212195

Modified to ensure that the correct rounding units are always used when calculating line discounts.

Seradex.Win.OrderEntryFormLibrary.dll

6.4.5 02/13/2023 I2210185

Implemented support for enabling the web configurator menu item for Dbox clients with advance configurator license and 3DConfig enabled in Order Stream

Seradex.Win.ProspectImport.dll

Seradex OrderStream

Technical Release Notes

February 2023

- | | | | |
|--------|------------|----------|--|
| 6.4.23 | 02/13/2023 | I2111055 | Improved the performance of the matching algorithm and added logic to reduce false positives. Also corrected issues in the Matching form itself such as correcting launching CRM for propsects/suspects and issues related to addresses with missing state prov data and moving certain address fields from the left to the right. |
| | | I2209041 | Corrected an issue where the system is failing to gather and process the data correctly. |

Seradex.Win.Purchasing.dll

- | | | | |
|--------|------------|----------|---|
| 6.4.63 | 12/06/2022 | I2212036 | Addressed an issue with MRP by Location that prevented it from creating transfers. |
| 6.4.64 | 12/12/2022 | I2212092 | The logical test will be relaxed to allow the attempt to populate the OwnerLineNo line combo if the existing ownership information is incomplete. Validation was added to the save routine to prevent PO lines with header ownership but missing line ownership from being saved. |
| 6.4.65 | 02/13/2023 | I2212137 | Improve consistency of ActivityLog interop file usage. |
| | | I2301041 | Corrected issue whereby a unit discount amount was limited to 2 decimals regardless of the rounding units. |
| | | I2212220 | On selection of the vendor in the PO form, ensure the vendor's ShipTerms are loaded into the Ship Term combo. |
| | | I2002283 | Use new grid locking features to allow columns to be unlocked when approved using Advanced Security. |
| | | I2210200 | Made the SearchTab and MsgCentre automatic filtering consistent by applying the latter logic to the former control for the Purchasing and Receiving forms. |
| | | I2209026 | Allow selection of vendor with arrow keys for PO and set focus to vendor name on add |
| | | I2209212 | Added support to loop through a grid in DataEntryValidation if that grid has been changed. |
| | | I2209043 | Added a new validation ensuring that the system will not save the transaction if the selected transaction modified date is different from the data modified date. |
| | | I2005137 | Adjusted PO to only allow negative unit prices on non tracked items and added logic to receipt to ensure negative tracked costed items if they happen to be on a PO to land at \$0. |
| | | I2210046 | Remove StatusCode from cboStatus if it is not associated with a PO Status |
| | | I2209139 | The purchase order details grid has been updated to expand support for user defined values. |
| | | I2301200 | Corrected issue whereby Personal keys were not working. |
| | | I2301137 | Corrected issue where copying a PO does not respect the divisional genkey. |
| | | I2302060 | Prevent Facility detail location defaulting when the PO Ship To is either Vendor or Customer. |

Seradex.Win.QuickConfigurator.dll

- | | | | |
|--------|------------|----------|---|
| 6.4.34 | 02/13/2023 | I2210028 | Corrected an issue where the field index for a product line is not been calculated correctly when the index does not start with a zero. |

Technical Release Notes

February 2023

Seradex.Win.Receiving.dll

6.4.56	02/13/2023	I2209043	Added a new validation ensuring that the system will not save the transaction if the selected transaction modified date is different from the data modified date.
		I2209091	Updated Receiving approval logic to not rely on the Com receiving dll
		I2103188	Modified to be able to specify and read multiple destination fields from the EDIElements table so that one source field can be mapped to more than one destination field.
		I2206114	Add handling of new Creator fields on generation from SVO.
		I2210200	Made the SearchTab and MsgCentre automatic filtering consistent by applying the latter logic to the former control for the Purchasing and Receiving forms.
		I2002283	Use new grid locking features to allow columns to be unlocked when approved using Advanced Security.
		I2209107	Added Container Management option to the tools menu of Receiving.
		I2301013	The Receiving line > Inventory Details form will no longer assume that the quantity received is an Integer value.
		I2212137	Improve consistency of ActivityLog interop file usage.
		I2212239	Added the feature that appropriately colors the receiving detail line for lot/serial tracked items in the receiving module.

Seradex.Win.SalesOrder.dll

6.4.49	12/22/2022	I2212233	Set the Ship Terms and Ship Via of lines without items when the corresponding header value has been changed.
6.4.50	01/16/2023	I2301200	Corrected issue whereby Personal keys were not working.
6.4.51	02/13/2023	I2212232	Adjusted sales order to load the initial sales order form in a more timely manner as well as loading of the sales order document.
		I2212268	Improved the usability of the interaction between the header and detail Ship To fields.
		I2301278	Corrected issue where Customer account set was not being saved with the sales order if the order has a default header location.
		I2212195	Modified to ensure that the correct rounding units are always used when calculating line discounts.
		I2212137	Improve consistency of ActivityLog interop file usage.
		I2212048	A redundant button to access the Transaction Commissions form was added to the SalesOrder form, in the Additional tab.
		I2211231	A redundant button to access the Transaction Commissions form was added to the SalesOrder form, in the Additional tab.
		I2209015	Changing the price list code will now also update the subtotal and other total information.
		I2002283	Use new grid locking features to allow columns to be unlocked when approved using Advanced Security.
		I2210159	Added functionality to set the "Changed" flag for the SalesOrder form if line taxes are modified.
		I2201181	When a customer or prospect is selected, users will now be notified if an inactive sales rep is assigned.
		I2109322	Enhanced price update functionality to take the new Line Item Price Update preference into account.

Seradex OrderStream

Technical Release Notes

February 2023

6.4.51	02/13/2023	I2209043	Added a new validation ensuring that the system will not save the transaction if the selected transaction modified date is different from the data modified date.
		I2209212	Added support to loop through a grid in DataEntryValidation if that grid has been changed.
		I2209231	Ensure a customer is selected prior to selecting items. Ensure an active detail is selected when attempting to perform context menu actions.

Seradex.Win.Scheduling.Finite.dll

6.4.35	02/13/2023	I2206263	Modified to add the ability to move multiple lines at once on the detail tab of the Scheduling main user interface. Also to be able to set the Locked status of multiple lines at once.
--------	------------	----------	--

Seradex.Win.Search.dll

6.4.101	02/13/2023	I2208080	Adjusted Global Grid settings to allow users to specify font's to be able to adjust the appearance of searches by employee.
		I2209252	Altered to ensure that when used by the designers, SQLBuildActions are only run when needed.
		I2209062	Allow Opportunities to have its own set of Searches.
		I2201134	Search links on the search links setup form will now be sorted by the saved display order.
		I2209141	Corrected an issue where the system will error when attempting to save a search base query with a blank SQL Build Action.

Seradex.Win.ServiceOrder.dll

6.4.15	02/13/2023	I2206114	Add handling of the new Creator fields for Receipt generation.
		I2209212	Added support to loop through a grid in DataEntryValidation if that grid has been changed.
		I2209043	Added a new validation ensuring that the system will not save the transaction if the selected transaction modified date is different from the data modified date.
		I2212137	Improve consistency of ActivityLog interop file usage.

Seradex.Win.Shipping.dll

6.4.44	02/13/2023	I2212094	Added the ability to simplify freight details if preferred, treating all freight details as miscellaneous.
		I2002283	Use new grid locking features to allow columns to be unlocked when approved using Advanced Security.
		I2211002	Reduced the number of times secured controls is evaluated when performing actions such as ship all and ship all available.
		I2210100	Improved performance loading and deleting large shipments as well as creating a new shipment from a large sales order.
		I2211003	Altered the Ship all available logic so non stock items only see inventory that is available for the sales order line (or allocated to the shipping detail already).

Seradex OrderStream

Technical Release Notes

February 2023

6.4.44	02/13/2023	I2209043	Added a new validation ensuring that the system will not save the transaction if the selected transaction modified date is different from the data modified date.
		I2208018	Correct issue where Qty shipped, if a decimal, would fill in incorrectly as 0 on the inventory allocation form
		I2212141	Invoice combo will remain active in all cases, allowing multiple invoices related to a single approved shipment to all be visible.

Seradex.Win.ShopFloorExecution.dll

6.4.62	02/13/2023	I2301153	Ensured dynamic controls were removed when Shop floor closes as well as ensure Editable qty fields show work order rounding units plus those not editable but WO related as using rounding units.
		I2209184	Modified the logic behind the employee selection on the main SFE user interface to avoid the automatic loading of the data when retrieving the last saved cell since the employee selection action already handles the loading.
		I2206263	Modified to add a new search tab on the main SFE form to display custom searches.

Seradex.Win.WorkFlow.dll

6.4.13	02/13/2023	I2110167	The keyboard shortcut Ctrl + C will no longer close the Work Flow Setup form. The shortcut Ctrl + U has been added in its place.
--------	------------	----------	--

Seradex.Win.WorkOrder.dll

6.4.42	02/13/2023	I2206185	Added Ctrl + E functionality to update all work order lines' EMA Date to the selected line's EMA Date.
		I2209043	Added a new validation ensuring that the system will not save the transaction if the selected transaction modified date is different from the data modified date.
		I2205253	Modified to add a new user screen for the .NET "Work Order Generator" based on the Search control.
		I2209016	Optimized the logic ensuring that the required time is reduced when loading and saving a work order transaction document.
		I2112031	Added logic to lock down form interaction when loading a selected transaction document.
		I2209220	Add Completed and Open to view filters for work orders
		I2002283	Use new grid locking features to allow columns to be unlocked when approved using Advanced Security.
		I2301200	Corrected issue whereby Personal keys were not working.

ServiceOrder.dll

6.4.79	02/13/2023	I2206114	Allow the ServiceOrderMaterialID and OwnerSubType to be pushed to receiving on generation.
--------	------------	----------	--

Seradex OrderStream

Technical Release Notes

February 2023

Shipping.dll

6.4.176	02/13/2023	I2212094	Added the ability to simplify freight details if preferred, treating all freight details as miscellaneous.
		I2209043	The date created and modified are now read from the database to track changes in a multi-user environment.

sxEDIBridge.dll

6.4.62	12/20/2022	I2212140	Ensure that Config properties get transferred for non-regular Product Lines.
6.4.63	01/19/2023	I2212237	Modified to only use the Reconfigure option to process all bill of materials, and never to use the external auto processor to avoid collisions and unexpected temp table drop
6.4.64	02/13/2023	I2211064	Corrected issue whereby detail level ship to's being used on order lines, if they have tax groups the order detail did not use them.
		I2209190	Load Customers combo on form load without needing to click and unclick AP
		I2109322	Enhanced price update functionality to take the new Line Item Price Update preference into account.

sxMaintenance.dll

6.4.151	02/13/2023	I2108105	When the employee setup form is opened from a search for a supervisor, the supervisor tab will now be visible.
		I2206144	Modified the Contact Maintenance user interface to give the user the ability to create the contact link for the specified account when receiving the duplicate email validation message upon saving if the screen was launched from a transactional module.
		I2210008	Display not activated message for facilities module if license not activated
		I2211232	Fixed minor spelling errors in option text

sxMaintenanceControls.ocx

6.4.41	02/13/2023	I2211232	Fixed minor spelling errors in option text
		I2212094	Added a new application preference (Sales > Treat All Freight Details As Miscellaneous) and rearranged the Sales tab.
		I2209179	Implement a new Sales preference to choose Aspose over Excel when pricing line items
		I2109322	Added a new Application Preference option, Line Item Price Update.

sxProfile.dll

6.4.28	02/13/2023	I2209235	Fix issue loading users from sxRuntime.mdb
--------	------------	----------	--

sxRuntimeSchedule.xlsm

6.4.0	02/13/2023	I2211041	Modified to work with sxSystem.
-------	------------	----------	---------------------------------

Seradex OrderStream

Technical Release Notes

February 2023

sxTaxes.dll

6.4.42 02/13/2023 I2210037 Corrected issue where the feature used by online tax to consolidate into one tax authority does not work if the header tax of the document itself is a non nexus tax group.

sxUserDefineds.ocx

6.4.48 02/13/2023 I1805105 Added support for numeric-only text box user-defined property.

WGenerator.dll

6.4.45 02/13/2023 I2205253 Modified to add the call to the new .NET "Work Order Generator" interface.

WorkOrder.dll

6.4.220 12/06/2022 I2212067 Modified to correct a recently introduced problem with the work order completion screen where comma separated values in the "Quantity to Inventory" column were not properly interpreted during completion.

6.4.221 02/13/2023 I2209043 The date created and modified are now read from the database to track changes in a multi-user environment.

I2210058 Allow sorting on the top grid of WorkOrderCompletion by clicking headers

I2204200 Modified to cascade the changes made via the "BOM Batch Change" to the related sub work orders.

I2210158 When completing work orders from Shop floor, when using a new container, the newly generated container number is not set for the next completion.

I2208308 Modified the scheduled finish date calculation to ignore completed operations and handle non-tracked operations to ensure it gives current, accurate results. Modified the Actual finish date to no longer display a value when the work order is only partly completed.

I2209220 Add Completed and Open to view filters for work orders

I2302055 The Work Order module was modified to correct an issue where the Batch Processor was not able to report on work order completion failures. A missing field in the error table that is used for this purpose was causing the problem.

I2205253 Modified to add the ability to copy storage documents from external modules and also to disable some genkey features when using the procedure that generate work orders using temporary tables.
