Seradex OrderStream
Technical Release Notes
June 2023

AcctMaintenance.dll

6.4.127	06/16/2023	I2302360	Modified the Customer Ship form to filter the list of Cust Acct Sets based on the facility of the selected ship from location to prevent mismatches from being created on the ship tos when the Division/Facility functionality is enabled.
		I2210181	Require Address in Vendor Maintenance Entry
		I2304164	Ensure when viewing a ship to in read only mode from transactions such as sales order, users cannot change the ship to or modify address or additional information such as taxes.
6.4.128	06/19/2023	I2306161	Ensure the correct name of the ShipTermID field is used when gathering Ship To information from the Lookup.

AdminTools.dll

6.4.71	06/16/2023	I2305156	Modified Web Update to ensure that DBOX update failures remain visible and are not cleared when the updates are completed. In addition, the user is now notified at the end of the process if a DBOX update fails. Improved the messaging when certain updates are available.
		I2305224	Modified WebUpdate to bypass checking custom files, and therefore not providing updates for them, when the client is unable to download the latest core files because they are using an unsupported setup (SQL Server prior to SQL 2016, not using the SeradexMasterConfiguration.xml file (i.e. SQL sxSystem db), or not yet using the new user interfaces (screens). This eliminates potential errors due to their custom files being updated to use files and functionality that the client does not yet have.

Config.dll

6.4.204	06/16/2023	I2305051	Modified Config code to use absolute reference, instead of relative referencing when the determining the Input Cell address to write Input values for configuration.
		I2305304	Modified config to only delete error log records that were created by config only and not others
		I2306011	Corrected an issue to always show the correct 'Records not processed' count on auto processor inteface when reconfiguring.
		I2305144	Corrected an issue in the configurator to properly support multiple instances of an item by using the Twin column setup.
		I2304292	For Autoprocessor, when using the 'UpdateDetail' option, LAN configurations will now be updated as expected.
		I2302029	Implemented the functional support in the configurator for the Auto List Single Value default feature for excel and query controlled text box properties in both Dbox and Order Steam
		I2301142	Modified the config Properties form to be able to have values with up to 250 characters in the spread.

| 6.4.204 | 06/16/2023 | I2303123 | Corrected an issue that was causing property value lookup selection from the search module to not be selected in the configurator for simple combo boxes. Fixed both issues found, including the problem that was causing errors when navigating with the configurator line buttons for single column combo boxes, and properly load the properties that was saved in the other combo types. |

DataTransfer.mdb

6.4.306	06/16/2023	I2301093	Modified to update the core Microvellum version 2.0 import queries to be able to: - Show the dimensions on the BOM description. - Round the dimensions to 4 decimal places on description fields. - Adjust the logic that calculates the quantity per parent when dealing with the optimization data since the data is optimized taking into account the total quantity per line.
		I2303345	Modified to add a new field to the AppIntegrationBOMs table to store the item's source classification. Note that to make a use of this field the import queries must specified the item's source.
		I2301142	Modified the Properties and ProductLineProperties tables to increase the length of the DefaultValue column to 250 characters.
		I2301293	Added a new Integrity Check to detect unsupported parallel operation branches on work orders.
		I2303233	Increased the Username field in the Error Logs table to accept longer usernames such as service accounts or application pools.
		I2203305	Added DatabaseID to ModuleThemeLinks to allow filtering by database in the Module Theme Configurator.
		I2302089	Added an Integrity Check to report on Work Centers that do not have Calendars for Clients with Advanced Finite/Hybrid Scheduling.
		I2206272	Added a new table to store the information for additional external databases. Also added a new field to the AppIntegrationSetupDetails table.
		I2305169	Corrected update for the Add Zero Default Constraints to Est/SO Details Retail Fields data transfer update if those fields already had a default value of 0.

Estimating.dll

| 6.4.198 | 06/16/2023 | I2301281 | Corrected issue where generating a Sales order from an estimate using advanced batch processing does not calculate the available credit on the newly created sales order. |

InventoryTransfer.dll

| 6.4.122 | 06/16/2023 | I2302128A | The transfer system has been updated to handle missing transfer quantities. |
| | | I2302318 | Ensure that allocated inventory can be transferred through a Transit transfer. |

Invoice.dll

| 6.4.189 | 06/16/2023 | I2302371 | Improved performance approving larger invoices which are related to shipments or direct sales order invoices with a large number of lot/serial tracked items. |

ItemEditor.dll

| 6.4.161 | 06/16/2023 | I2211266 | A new menu item has been added to launch the Batch BOM Update utility. |
| | | I2304195 | Manual labour schedule modifications no longer include invalid operations. |

RptDataCollection.dll

| 6.4.83 | 06/16/2023 | I2210001 | Modified to correct a problem with one of the queries that gathers the data for the "Completed Work Order Variance" report. |

SalesOrder.dll

6.4.244	06/16/2023	I2209045	Modified the routine that synchronizes the serial records with the quantity on the work order when the serial numbers are stored in the WorkOrderLotSerialInventory table to improve reliability when dealing with multiple lines and lines where some serial numbers have already been completed.
		I2303354	Modified a query within MatReq to prevent multiplication of records for Stock items.
		I2302032	Support for inter-company has been extended to the sales order backend.

Seradex.BaseSystem.dll

| 6.4.61 | 06/16/2023 | I2302372 | Added extension method to facilitate easier string manipulation. |

Seradex.Common.EDISystem.dll

| 6.4.22 | 06/16/2023 | I2207172 | Added the ability for Single Sheet Excel EDI imports to use the Automated Import functionality if only one EDI Type is expected. |

Seradex.CommonServices.dll

6.4.81	06/16/2023	I2303189	Refactored to eliminate an unneeded method to obtain EmployeeGroup.
		I2303277	Altered the progress indicator to ensure when the progress form is stopped that it properly cleans up internal objects used.
		I2306011	Corrected an issue to show the appropriate colors for configured line items with configuration errors.

Seradex.Connection.dll

| 6.4.52 | 06/16/2023 | I2302372 | Added asynchronous methods for creating data tables and data sets. |

Seradex.EstimateSystem.dll

6.4.32	06/16/2023	I2302372	Improve save performance times for large data sets.
		I2303242	Corrected an issue that was causing the wrong new line number information to be written to PriceList.xls Input worksheet when adding new new additional charge items
		I2306011	Corrected an issue to show the appropriate colors for configured line items with configuration errors.
6.4.33	06/19/2023	I2306161	Revert the batch save upgrade changes until the modified details can be determined correctly.

Seradex.Excel.dll

6.4.27	06/21/2023	I2208320	Modified utility to open configurator workbooks in READ ONLY mode.

Seradex.Financials.FinancialsSystem.dll

6.4.130	06/16/2023	I2303189	Refactored to eliminate an unneeded method to obtain EmployeeGroup.
		I2101194	Added validation on the year end close to detect unapproved manual entires on or before the year end date and when viewing unapproved manual entires that happen to be in closed periods to inform the user as to why the entry is locked.

Seradex.Infragistics.dll

6.4.65	06/16/2023	I2302371	Improved loading combos used on the new interface forms where there is a large amount of rows and columns.
		I2303211	Added handling to set the combo dropdown width to a value based on the width of its contents.
		I2302372	Update typed combo controls to be able to load in a more efficient manner. Improve Data Validation performance. Improve connection handling in Secured Controls.
		I2304021	Reduced the global grid scroll bar size to accommodate small grids.
		I2208259	Add helper methods to facilitate easier usage of grid column Hidden and Read Only properties.
		I2305013	Changed the col.Tag attribute to col.Key to be checked if the grid combo is "priority" and should be treated like a combo.
		I2203305	Modified to support applying Module Themes to a specific database. Enhanced the Module Theme Configurator to improve seeing and modifying existing settings. Enabled overriding the theme for combos.
		I2303224	Modified to allow the Infragistics built-in filter row to behave properly when filtering on checkbox columns. Now it will allow filtering on both: true and false values.

Seradex.Inventory.Adjustment.dll

6.4.9	06/16/2023	I2210120	Added handling of the new Exclude Consignment setting when using the location chooser dialog on Physical Count sheet creation.

Seradex.Inventory.dll

6.4.44	06/16/2023	I2303253	Support has been added for Shipping lot/serial inventory allocation from web applications.
		I2304160	Support has been added for assigning inventory to a sales order from mobile applications.
		I2210056	Improved performance approving shipments for those with larger databases.
		I2304015	Corrected inventory allocation functions when used to release allocated inventory

Seradex.InvoiceSystem.dll

| 6.4.34 | 06/16/2023 | I2302371 | Improved performance loading Credit note from search for larger databases and improved loading invoice for those with large amount of sell items and historical invoices. |

Seradex.ItemEditor.ItemEditorSystem.dll

| 6.4.4 | 06/16/2023 | I2211266 | A new Batch BOM Update utility has been created to manage item BOMs. |
| | | I2304006 | Modified to update related transactions when the line spec is changed due to a quantity modification in the "Mass BOM Quantity Modifier". |

Seradex.Library.dll

| 6.4.30 | 06/16/2023 | I2206272 | Modified to add a new table to store the information for additional external databases. Also added a new field to the AppIntegrationSetupDetails table. |
| | | I2203305 | Modified the colourless theme applied to controls. |

Seradex.OrderEntry.AdvancedDeliverySchedule.dll

| 6.4.6 | 06/16/2023 | I2305001 | Modified the new document procedure to prevent previous documents' detail UDFs from being deleted. |

Seradex.OrderEntry.dll

| 6.4.22 | 06/16/2023 | I2302371 | Updated to support passed in connections |

Seradex.OrderEntryLibrary.dll

6.4.33	06/13/2023	I2306105	When a new spec needs to be created through the Add Additional Charges functionality, ensure that all data readers are closed before requesting new spec creation.
6.4.34	06/16/2023	I2305228	When the Pricelist returns $0 as the list price, ensure that any valid Pricelist discount is still applied to the line, when applicable.
		I2304198	PriceList behaviour will no longer run for Product Line items.
		I2304015	Updated shipping to be able to process shipments via ERP Anywhere

| 6.4.34 | 06/16/2023 | I2302372 | Add generic Stock Qty table gathering behaviour. |

Seradex.ProductConfigurator.dll

| 6.4.15 | 06/16/2023 | I2304292 | For Autoprocessor, when using the 'UpdateDetail' option, LAN configurations will now be updated as expected. |

Seradex.Production.DataCollection.dll

6.4.71	06/05/2023	I2305256	Ensure that when completing Lot and Serial tracked WO line items with a quantity of 0 in SFE, the QtyCompleted is set to the remaining quantity to complete of the line.
6.4.72	06/16/2023	I2204117	Modified to use the work center specified from scheduling as the default when available in Shop Floor Execution.
		I2111041	Added support to use on punch clock for indirect labour.
		I2212173	Fixed an issue where over/under completion was being allowed for cells that did not have those options enabled.

Seradex.Production.PunchClock.dll

| 6.4.19 | 06/16/2023 | I2111041 | Added support for custom logic and altered to use the shop floor system for indirect labour. |

Seradex.Production.QualityAssurance.dll

| 6.4.9 | 06/16/2023 | I2302026 | Corrected error when there is no connection available with the runtime engine of 'sxRuntime'. |

Seradex.Production.Scheduling.dll

| 6.4.92 | 06/16/2023 | I2305272 | Modified to free up a significant amount of memory when data is reloaded to eliminate an OutOfMemoryException in Finite/Hybrid Scheduling. |

Seradex.Production.WorkOrder.dll

6.4.46	06/16/2023	I2305110	Modified the validation routine on save to bypass checking for multiple divisions if there are no lines to be checked.
		I2303227	The work order form can no longer reset the mat req status.
6.4.47	06/19/2023	I2306138	Modified to ensure that the query that updates the quantity stock on sub work order lines after changes have been made on the corresponding top work order line properly recalculates the stock quantity value.

Seradex.Purchasing.dll

| 6.4.39 | 06/16/2023 | I2302372 | Improved save performance for large data sets. |

Seradex.Purchasing.ReceivingSystem.dll

6.4.39	05/15/2023	I2305191	Corrected error checking negative inventory on VR approval.
6.4.40	06/16/2023	I2210248	Improved performance of loading.saving unapproved vendor returns and receipts with a large number of lines not marked completed.
		I2304041	Ensured if a PO is received without any qty to received and every line on the receipt is marked as completed by the user, the header of the receipt gets marked as inventory updated to match the details inventory updated status.
		I2302033	Receiving Items now default to 1 when repicked.

Seradex.SalesOrderSystem.dll

6.4.43	06/16/2023	I2304070	Ensure that the internal Update Price Option property is not defaulted to an invalid value.
		I2303242	Corrected an issue that was causing the wrong new line number information to be written to PriceList.xls Input worksheet when adding new new additional charge items
		I2305243	The code to validate agreement between header and line ShipTos will be bypassed if no header ShipTo has been set.
		I2306011	Corrected an issue to show the appropriate colors for configured line items with configuration errors.

Seradex.ServiceOrderSystem.dll

6.4.11	06/16/2023	I2208259	Add read-only CustomerPO field to SVO Details.

Seradex.Shipping.dll

6.4.28	05/30/2023	I2305193	Corrected issue shipping the remainder of a previously partially shipping order line that was invoiced. The sales order line status was being set to invoiced prematurely.
6.4.29	06/16/2023	I2305332	Shipments with no items to ship will now record that inventory has been updated after approval.
		I2305263	Added handling for cases when the loaded SalesOrderDetails.QtyShippedToDate values are NULL, treating them as zero.
		I2301221	Added validation on new shipment save to check for an extant unapproved shipment against the related sales order.
		I2304014	Corrected calls to GetFieldData.
		I2304015	Updated shipping to be able to process shipments via ERP Anywhere
		I2304135	Corrected issue saving when the Shipping Genkey is locked or ran out of keys.
		I2304030	Added validation/correction on save to populate the header SalesOrderID if the shipment's lines have only one SalesOrderID among them - likely as a result of having deleted one or more lines for a multi-order shipment.
		I2210056	Improved performance approving shipments for those with larger databases.

Seradex.SQLBuildActions.dll

| 6.4.2 | 05/26/2023 | I2305235 | The temporary table replacement has been updated to support table name instances with no leading spaces. |
| 6.4.3 | 06/16/2023 | I2304259 | Used .Net methods to instantiate and dispose of the Seradex.Win.RecurringTransaction object, rather than COM, preventing a disposal error when closing the JobCosting core report. |

Seradex.Strings.dll

| 6.4.53 | 06/16/2023 | I2210120 | Added ConsignmentInventory license to the LicenseKeys class. |

Seradex.UserDefined.dll

| 6.4.19 | 06/16/2023 | I2305001 | Modified the new document procedure to prevent previous documents' detail UDFs from being deleted. |

Seradex.Utilities.IntegrationMgrSystem.dll

6.4.31	06/16/2023	I2304138	Modified to ensure that the selected Microvellum products during the import are validated against the OrderStream product lines and also that the product lines have been set up with their corresponding phantom items.
		I2206272	Modified to add support for the new App Integration Microvellum import mode based on consolidated work orders.
		I2301280	Ensure the correct App Type object is used when importing through the 2020 Import system.
		I2303345	Modified to be able to display a couple of additional columns on the "Missing Items" screen: the item's source and the source item name to help the user determining the nature of the missing items, whether they are make or simple components.

Seradex.Win.AdvancedDeliverySchedule.dll

| 6.4.7 | 06/16/2023 | I2305001 | Modified the new document procedure to prevent previous documents' detail UDFs from being deleted. |

Seradex.Win.AppboxThemeConfigurator.dll

| 6.4.7 | 06/16/2023 | I2203305 | Modified to support applying Module Themes to a specific database. Enhanced the Module Theme Configurator to improve seeing and modifying existing settings. |

Seradex.Win.BatchProcessor.dll

| 6.4.23 | 06/16/2023 | I2303189 | Refactored to eliminate an unneeded method to obtain EmployeeGroup. |

Seradex.Win.Controls.dll

6.4.40	06/16/2023	I2302372	Cleaned up connection handling in the Contact control. Improved robustness of the Document Storage clean up method.
		I2304164	Ensure when viewing the ship to from sales order when the order is locked,users can not edit the ship to information such as address or change to another ship to.
		I2101194	Corrected display issue with the grid message box that was allowing users to edit the data.

Seradex.Win.Estimate.dll

6.4.51	05/11/2023	I2305142	Ensure that the View > All menu is correctly identified when clicked and that the Estimate combo is loaded appropriately.
6.4.52	06/16/2023	I2305244	Modified to ensure that if the estimate is approved, read-only or closed its lines cannot be deleted.
		I2306011	Corrected an issue to show the appropriate colors for configured line items with configuration errors.
		I2302372	Improve form loading and order loading performance.
		I2303177	The menu item to view the pricing workbook is now disabled when aspose pricing is enabled in application preferences.
		I2212049	The Shift + Insert functionality for inserting a new row will no longer move focus to the bottom of the grid.
		I2304198	Prevent line price updates due to Sales Rep changes on copy of an estimate.
		I2301280	The Windows wait cursor will now be displayed when manually running the Add Additional Charges functionality.
6.4.53	06/19/2023	I2306161	Ensure that the row state of the first added empty row does not get set to Unchanged, as this caused issues with saving.

Seradex.Win.Financials.dll

| 6.4.129 | 06/16/2023 | I2304093 | Added negative masking to Deposit Amount cells in Deposit form. |
| | | I2101194 | Added validation on the year end close to detect unapproved manual entires on or before the year end date and when viewing unapproved manual entires that happen to be in closed periods to inform the user as to why the entry is locked. |

Seradex.Win.IntegrationManager.dll

6.4.22	06/16/2023	I2303345	Modified the "Missing Items" screen to add a couple of columns: the item's source and the source item name to help the user determining the nature of the missing items, whether they are make or simple components.
		I2206272	Modified to support the new Microvellum consolidated import mode.
		I2301280	When running the 2020 Import, errors will now be logged under the correct App type, allowing them to be viewed in the Error Logs grid. When selecting a 2020 Import file, as well as importing, the Windows wait cursor will now be displayed along with visual changes to the Import button.
		I2304138	Modified to call the validation routines that ensure that the Microvellum products are validated against the OrderStream product lines during the import process and also that the product lines are set up with their corresponding phantom items.

| 6.4.22 | 06/16/2023 | I2303224 | Modified to add the default filter row to the various setup user screens available for the Microvellum and Cabinet Vision import types. |

Seradex.Win.InventoryAdjustment.dll

| 6.4.2 | 06/16/2023 | I2210120 | Added ability to display the location chooser dialog when creating the Physical Count sheet when using Consignment Inventory. Added Exclude Consign setting to the Create Count Sheet dialog. |

Seradex.Win.InventoryCosting.dll

| 6.4.11 | 06/16/2023 | I2304021 | Reduced the global grid scroll bar size to accommodate small grids. |

Seradex.Win.InventoryTransfer.dll

| 6.4.35 | 06/16/2023 | I2209303 | When receiving a facility transfer, selecting the transfer number will now automatically populate the available inventory. |

Seradex.Win.Invoice.dll

6.4.59	06/16/2023	I2302371	Improved performance approving larger invoices which are related to shipments or direct sales order invoices with a large number of lot/serial tracked items.
		I2301044	Improved performance of loading invoices from search and reduce memory usage.
		I2303189	Refactored to eliminate an unneeded method to obtain EmployeeGroup.

Seradex.Win.ItemEditor.dll

| 6.4.5 | 06/16/2023 | I2211266 | A new Batch BOM Update utility has been created to manage item BOMs. |
| | | I2304006 | Modified to be able to update related transactions when the line spec is changed due to a quantity modification in the "Mass BOM Quantity Modifier". |

Seradex.Win.MaintenanceTools.dll

| 6.4.18 | 06/16/2023 | I2209008 | Minor changes for internal use. |

Seradex.Win.Purchasing.dll

6.4.68	05/09/2023	I2305116	The saving a purchase order will now remove temporary database objects created while validating.
6.4.69	06/16/2023	I2302372	Improve form loading and order loading performance.
		I2302233	Remove validation on stock or nontrack items for missing owner information
		I2212246	The Buyer and Requested By combos will now have inactive employees filtered out.

Seradex.Win.Receiving.dll

6.4.61	06/16/2023	I2210248	Improved performance of loading.saving unapproved vendor returns and receipts with a large number of lines not marked completed.
		I2206111	Improved loading unapproved receipts with large number of lines, especially those with detail ownership to either sales order or work orders.

Seradex.Win.SalesOrder.dll

6.4.57	05/11/2023	I2305142	Ensure that the View > All menu is correctly identified when clicked and that the Sales Order combo is loaded appropriately.
6.4.58	05/26/2023	I2305255	Corrected issue whereby changing a tax on an existing ship to in Sales order without changing to different ship to no longer calculated tax on the order.
6.4.59	06/16/2023	I2304164	Address control will now lock ShipTo controls when SOStatus is Shipped or higher
		I2306011	Corrected an issue to show the appropriate colors for configured line items with configuration errors.
		I2306065	Modified the line number handling to invoke the correct line when invoking ItemEditor from the SalesOrder grid.
		I2303177	The menu item to view the pricing workbook is now disabled when aspose pricing is enabled in application preferences.
		I2303386	Corrected issue where changing a ship to address on a Sales order was not updating the current order.
		I2304162	Allow external calls to refresh the sales order combo.
		I2212049	The Shift + Insert functionality for inserting a new row will no longer move focus to the bottom of the grid.
		I2302221	Applied the same secured control treatment to the exploded view of the Comments/TAG grid column for the purposes of making it editable when the parent document is approved.
		I2301280	The Windows wait cursor will now be displayed when manually running the Add Additional Charges functionality.
		I2302032	After processing inter-company documents, the sales order backend connection information will now be reset.
		I2302360	Modified to add a core validation to ensure a customer account set is assigned to the sales order header on save. Also, made two modifications, one to prevent the header location from being cleared on selection of new location when creating an order and the other to ensure that the Cust Acct Set from ship to is assigned to the sales order header when there is one.

Seradex.Win.Scheduling.Finite.dll

6.4.38	06/16/2023	I2305272	Modified to free up a significant amount of memory when data is reloaded to eliminate an OutOfMemoryException.

Seradex.Win.Search.dll

6.4.103	06/16/2023	I2302190	In the Search grid control, ensure the Copy and Sort context menus are displayed as expected after previously right clicking on the search grid grey space.

Seradex.Win.ServiceOrder.dll

6.4.18	06/16/2023	I2212213	Improved performance of loading existing Service order documents where there is a large number of active items in the database.
		I2303189	Refactored to eliminate an unneeded method to obtain EmployeeGroup.
		I2208259	Added read-only CustomerPO field to the SVO Detail grid. Rename header CustomerPO field to Reference. Modified which fields are editable.

Seradex.Win.Shipping.dll

6.4.47	06/16/2023	I2301221	Added validation on new shipment save to check for an extant unapproved shipment against the related sales order.
		I2304075	Improved performance loading the Shipping form either from the profile bar or from external sources such as search.
		I2304030	Removed validation to prevent saving a shipment with no header SalesOrderID where one should be present.
		I2304135	Corrected issue saving when the Shipping Genkey is locked or ran ouf ot keys.

Seradex.Win.WorkOrder.dll

6.4.48	06/16/2023	I2304222	Modified the call to reload WO after save to use the selected work order when opened from another module and thereby permit a full reload.
		I2212258	The Origin Work Order combo will now be populated with all work orders in the system.
		I2302371	Improved performance when loading work orders and creating new ones when you have a large number of items or a large number of searches setup in the search tab.
		I2301133	Corrected issue whereby tabbing from certain controls without changing anything caused the save button to enable.
		I2301319	No longer attempt to resize grid columns loading WO from external sources to be consistent with the other modules, if a user had saved grid layouts they are still applied.
		I2305059	The Qty Completed WorkOrder form grid column was made to be persistently read-only.
		I2305214	Set the Qty Transferred Date Work Order form grid field to be non-editable by default.
6.4.49	06/23/2023	I2306239	Improved performance loading Work order from external sources for those with a large number of existing work orders.

ShipDetails.exe

6.4.25	06/16/2023	I2301342	Implemented a system auth code authorization feature for item additions to completed boxes. Users are now prompted to enter authorization code when they add items to completed boxes.

sxAddress.ocx

6.4.16	06/16/2023	I2210181	Require Address in Vendor Maintenance Entry

sxMaintenance.dll

6.4.153	06/16/2023	I2304230	Bypassed form resize logic when the form is being minimized.
		I2101194	Added a message when attempting to save the fiscal calendar if the user attempted to unlock a period dated prior to the last year end hard close.

sxPhysical.dll

6.4.43	06/16/2023	I2210120	Add Include Consignment flags to the Physical Module tag creation filter dialogs. Add consignment tag quantity decrease warning validation.

sxRuntime.exe

6.4.62	06/16/2023	I2209008	Improved the startup time of OrderStream. The splash screen now displays much sooner, but will display even when an update is required.

WebSFE BinShare.zip

6.4.3	06/16/2023	I2212173	Fixed an issue where completing an operation in Web Shop Floor would ignore the Cell's constraints about over/under completion. Partial completions should now work as expected.
		I2302290	Fixed an issue causing the column headers in Web Shop Floor to show the data/SQL column name rather than the specified header text. Modified the grid to fill more space in the browser and let certain fields have more width/space to improve the visual appeal of the website/data.
		I2107190	Modified Web Shop Floor to use the exact same code as OrderStream Shop Floor for actions such as start, stop, complete etc. It now supports Proration of data collection labour for multiple completions in Shop Floor as well.
		I2207094	Corrected issues if the work order owner type is not 28 regarding attachments.
		I2207096	Web Shop Floor will now automatically hide ID columns.
		I2209184	Fixed an issue where Web Shop Floor would hang indefinitely when loading a cell with no results. Modified Start/Stop/Complete to not completely reload the grid, since the Data is properly updated during processing so no reload from the database is required.
		I2210230	Corrected an issue that prevented operations from being performed on the last item in the grid for a cell.

WebSFE Pages.zip

6.4.2	06/16/2023	I2212116	Corrected an issue where the Attachments page in Web Shop Floor would fail to load.
		I2207094	Corrected issues if the work order owner type is not 28 regarding attachments.
