Seradex OrderStream
Technical Release Notes
May 2021

AdminTools.dll

6.4.65	05/28/2021	I2011196	Added support to download and apply license file data for a given company via the master API
		I2011154	The database cleanup utility now contains an option to clear temporary transaction logs.

DataTransfer.mdb

6.4.280	05/26/2021	I2103396	Changed the label of the secured control for the "Comments" tab in SalesOrder from the "Commissions" tab, which is no longer used.
		I2102305	Added a new integrity check named: "Work Orders Not Completed with all lines already completed" to detect work orders where all lines have been already completed, but the header is still set to not completed. Also, added a fix to correct the header completion and approved statuses.
		I2003076	Removed all ChildItemID indexes on ItemSpecStruc if they exist and recreated 'ItemSpecStruc_IX_ ChildItemID' index on ItemSpecStruc in the SECONDARY file group.
		I2103185	Added an integrity check to return any sales order which is associated with more than one job or opportunity.
		I2104077	Changed a concatenation of fields into a concat() for an existing exception check query, preventing a potential query failure.
		I2104124	Alter remittance report to not require either an address or pay to address.
		I2102097	Modified to add a new secured control entry to the sxSystem database to be able to hide the new "Costing Info" tab on the header of the Sales Order screen.
		I2103023	Added indexes to SearchDetails, TransWorkFlowDetails, and ToBeScheduled.
		I2103327	The integrity check results cannot be accommodated in an intermediate table's column, so this integrity check's results are truncated to 254 characters.
		I2012271	Corrected issue where either unapproved credit notes or approved yet not posted credit notes existed against invoices which also were against shipments with inventory values, those invoices were being reported on the Shipping Accrual Search.
		I2105031	The "Open PO By Item" core report query was modified to prevent the multiplication of lines.

Estimating.dll

6.4.183	05/26/2021	I2104180	Will now exclude copied estimate lines if they are not Sell items.

InventoryAdjustment.dll

6.4.99	05/26/2021	I2103232	Saving an inventory adjustment will now consider the validity of the selected UOM with respect to the item selected rather than merely being a valid UOM. It will also check the UOM selected for the adjustment line in the database (rather than what is in the form) when validating approval.

RptPurchasing.dll

| 6.4.35 | 05/26/2021 | I2105031 | Modified the "Work Order" heading to read "Document No", to accommodate the change to the query which can now include a sales order as the owner. |

SalesOrder.dll

6.4.226	05/26/2021	I2104261	Adjusted the CheckforHighCostSpecs function to support inserting over 1000 records.
		I2102044	Modified to add the item description from the sales order line to the drop shipment user interface so that the user can uniquely identify the items to process.
		I2101118	Modified to ensure that when deleting lines on a sales order only the related lines on the associated work order are deleted when applicable.
		I2104180	Will now exclude copied sales order lines if they are not Sell items.
		I2101296	Added call to have .sales order create then feed the UDF temp table

Seradex.Connection.dll

| 6.4.46 | 05/26/2021 | I2010167 | Added helper function for query column checking. |

Seradex.EstimateSystem.dll

| 6.4.18 | 05/26/2021 | I2010167 | The item description can now be set using the Auto Add Charges functionality. |

Seradex.Infragistics.dll

| 6.4.50 | 05/26/2021 | I2104149 | Adjusted the logic ensuring that when loading saved grid settings, the column layout will only be affected. |

Seradex.InvoiceSystem.dll

| 6.4.21 | 05/26/2021 | I2104175 | When generating invoices from shipment, correct the entry date to today rather than using the shipments entry date |

Seradex.OrderEntryLibrary.dll

| 6.4.20 | 05/26/2021 | I2102222 | Corrected an issue where creating a manual work order and associating it to a sales order will silently fail if the sales order detail line contains a user-defined stat code. |

Seradex.Production.WorkOrder.dll

6.4.30	05/26/2021	I2102222	Corrected an issue where creating a manual work order and associating it to a sales order will silently fail if the sales order detail line contains a user-defined stat code.
		I2102118	Modified to ask the user whether or not to automatically update the associated sub work orders due dates when modifying the "Earliest Material Availability" field on a parent work order.
		I2003044	Modified to be able to automatically delete the related sub work orders when deleting the parent work order.

Seradex.SalesOrderSystem.dll

6.4.26	05/26/2021	I2010167	The item description can now be set using the Auto Add Charges functionality.
		I2103169	Adjusted the logic ensuring that the system will calculate when changing the margin percentage after selected an item.
		I2103372	Ensure the user defined details on a sales order line transfers to the pending user defined data for tracked assets

Seradex.ServiceOrderSystem.dll

| 6.4.3 | 05/26/2021 | I2103372 | Altered Service order to support launching from Tracked Assets and populating the default data as a new service order using the new Interface. |
| | | I2102252 | The Service Order Parts & Labour "Parts" grid will now use the correct display format for the discount percentage, which in turn will allow for the correct value to be sent to any generated credit note. |

Seradex.UserDefined.dll

6.4.7	05/26/2021	I2103014	Corrected an issue where the module user-defined gird columns error out when attempting to append duplicated properties' data field index.
		I2101302	Corrected an issue where the .NET User-Defined Columns weren't calling the required setup data for query
		I2101130	Corrected an issue where the user-defined date column is saving a time value.
		I2101296	Altered to launch a new .net detail User Defined pop up which supports query controlled filters off of form header values.
		I2102146	Adjusted the logic ensuring that the first visible column for lookup SQL combo will be the combo display value.
		I2105068	Adjusted the logic to ensure that loading the userdefined columns will now strip out the time component on any date udf value.

Seradex.Win.Controls.dll

6.4.26	05/26/2021	I2003044	Modified to add row resizing capability to the grid of the generic message box interface.
		I2101296	Compatibility with I2103408
		I2103425	Inactive vendors will now be hidden when the Purchase Order dropdown is populated.

Seradex.Win.DeliverySchedule.dll

6.4.25	05/26/2021	I2103430	New Interfacer module activation will no longer launch the Advanced Delivery Scheduling module.

Seradex.Win.Estimate.dll

6.4.33	05/26/2021	I2103371	Set focus to ItemNo when inserting rows into grdDetails on all .Net Modules
		I2101296	Compatibility with I2103408
		I2104149	Adjusted the logic ensuring that when loading saved grid settings, the column layout will only be affected.
		I2104180	Modified the ItemNo combos to include "grandfathered" non-Sell items, and then hide them so they can't be selected but can still be displayed when loading existing documents which include them.

Seradex.Win.InventoryAdditionalInfo.dll

6.4.5	05/26/2021	I2103372	Corrected issue attempting to use the lookup to find a tracked asset right after the form loads.

Seradex.Win.Invoice.dll

6.4.44	05/26/2021	I2104149	Adjusted the logic ensuring that when loading saved grid settings, the column layout will only be affected.
		I2101296	Compatibility with I2103408
		I2104215	Deleting an existing invoice will no longer cause an exception to be thrown.
		I2103371	Set focus to ItemNo when inserting rows into grdDetails on all .Net Modules
		I2103184	A credit note can now be generated and approved at the same when generated from Service Order without requiring multiple saves.

Seradex.Win.MaintenanceTools.dll

6.4.9	05/28/2021	I2011196	Added support to download license file data for a given company

Seradex.Win.Purchasing.dll

6.4.53	05/26/2021	I2103371	Set focus to ItemNo when inserting rows into grdDetails on all .Net Modules
		I2101296	Compatibility with I2103408
		I2104149	Adjusted the logic ensuring that when loading saved grid settings, the column layout will only be affected.

Seradex.Win.Receiving.dll

6.4.46	05/26/2021	I2104149	Adjusted the logic ensuring that when loading saved grid settings, the column layout will only be affected.
		I2103371	Set focus to ItemNo when inserting rows into grdDetails on all .Net Modules

| 6.4.46 | 05/26/2021 | I2103300 | Set focus to same fields set in VB6 when adding a new transactions in the .Net Transactional forms (Shipping, Work Order, Receiving) |

Seradex.Win.SalesOrder.dll

6.4.38	05/26/2021	I2103300	Set focus to same fields set in VB6 when adding a new transactions in the .Net Transactional forms (Shipping, Work Order, Receiving)
		I2103463	Prevent generating deposit invoices for orders that are shipped (SOStatus=3) or greater
		I2103371	Set focus to ItemNo when inserting rows into grdDetails on all .Net Modules
		I2104149	Adjusted the logic ensuring that when loading saved grid settings, the column layout will only be affected.
		I2102097	Modified to add a new tab named "Costing Info" to the sales order main screen header section to show the same costing information as the one currently in the Estimate module.
		I2104180	Modified the ItemNo combos to include "grandfathered" non-Sell items, and then hide them so they can't be selected but can still be displayed when loading existing documents which include them.
		I2101296	Altered to launch a new .net detail User Defined pop up which supports query controlled filters off of form header values.
		I2011281	Adjusted the logic ensuring that the Freight Vendor combo will be populated correctly on transaction load.
		I2104261	Adjusted the released memory logic ensuring that it doesn't slow down the loading process when there are a large number of details.

Seradex.Win.Shipping.dll

6.4.33	05/26/2021	I2104149	Adjusted the logic ensuring that when loading saved grid settings, the column layout will only be affected.
		I2103371	Set focus to ItemNo when inserting rows into grdDetails on all .Net Modules
6.4.34	05/28/2021	I2105225	Corrected an issue the shipping module where the ship via on the sales order is overridden in shipping by the customer's default ship via, when a new sales order is loaded to be shipped.

Seradex.Win.WorkOrder.dll

6.4.28	05/26/2021	I2103282	Modified to ensure that when copying an order the save button always becomes enabled.
		I2103371	Set focus to ItemNo when inserting rows into grdDetails on all .Net Modules
		I2104086	The WorkFlow control will now load employee combos correctly on initial selection of a work order. WorkFlow will now be locked correctly in all scenarios.
		I2003044	Modified to be able to automatically delete the related sub work orders when deleting the parent work order.
		I2103300	Set focus to same fields set in VB6 when adding a new transactions in the .Net Transactional forms (Shipping, Work Order, Receiving)
		I2103291	The double-click "exploded" view of the line Comment field will now be unlocked for approved work orders when the header Comments field is also unlocked for approved work orders.

| 6.4.28 | 05/26/2021 | I2104149 | Adjusted the logic ensuring that when loading saved grid settings, the column layout will only be affected. |
| | | I2102222 | Corrected an issue where creating a manual work order and associating it to a sales order will silently fail if the sales order detail line contains a user-defined stat code. |

ServiceOrder.dll

| 6.4.75 | 05/26/2021 | I2103372 | Altered Service order to support launching from Tracked Assets and populating the default data as a new service order using the new Interface. |

sxRuntime.exe

| 6.4.57 | 05/28/2021 | I2011196 | On the launch of Orderstream, before displaying any expiry warning message to the end user, check our Seradex hosted data via web API for the customers license expiry date instead of just the local expiry date |

sxWorkFlow.ocx

| 6.4.32 | 05/26/2021 | I2104086 | Ensure that the employee combos will be loaded regardless of the locked status of the WorkFlow control. |
| | | I2105042 | The default employee, which was being set for the session when the workflow was first created, will now also be set when an existing workflow is accessed. |

WorkOrder.dll

6.4.203	05/26/2021	I2104260	On Rework mode do not include all automatically and do not do matreq logic. Exclude and include all buttons serperated.
		I2104034	Modified to ensure that when inventory is going to be automatically allocated to the related sales order line upon work order completion, the system will first check the status of the sales order line and how much inventory is required to be allocated.
		I2103282	Modified the work order completion to display a message when aborting the process due to a failure in the inventory pre-allocation that takes place prior to backflushing.
		I2003044	Modified to be able to automatically delete the related sub work orders when deleting the parent work order.
		I2103471	Modified to implement the system preference "Allow to Create Negative Inventory" in the sub work order and consolidated work order completion process.
		I2104197	Quantities deallocated via Reallocation Before Completion will no longer be reverted on saving the form.
