

Seradex OrderStream

Technical Release Notes

May 2023

AcctMaintenance.dll

6.4.124	04/21/2023	I2301358	Remove Create new dialog from updating ship to when set to inactive. Add view options for inactive ship tos, remove them by default.
		I2303260	Forced the AcctMaintenance ShipTo form to report that its data had changed when a different CustomerShipTo record was selected from the Lookup via the search.
6.4.125	04/27/2023	I2304313	The logic to determine whether or not a ShipTo is inactive - and therefore able to be saved as a new ShipTo - has been corrected.
6.4.126	04/28/2023	I2304318	Corrected handling for inactive ShipTos.

ActiveM20.dll

6.4.149	02/27/2023	I2302331	Corrected issue whereby Unapprove of a vendor invoice does not function as expected.
6.4.150	03/08/2023	I2303047	Corrected issue whereby Unapproval would not perform all required actions to unapprove properly.
6.4.151	04/21/2023	I2202286	Ensure bom's marked as buy only with a bom are excluded from Item running balance calculations.

AdminTools.dll

6.4.70	04/10/2023	I2303344	Modified AdminTools to address an issue copying a larger number of files than the Windows API can handle.
--------	------------	----------	---

AutomatedReports.exe

6.4.11	04/21/2023	I2206027	Removed extraneous deprecated call to run the automated report.
--------	------------	----------	---

AutoUpdater.exe

6.4.45	03/09/2023	I2007120	Improved the following: Handling of mapped drives that are not available in an elevated session. Detection of IE enhanced security configuration in a 64-bit environment. Detection of the OS displayed on the Manual Update screen (Windows 10 and Server 2019 improved, Windows 11 and Server 2022 added). Minor handling of the OrderStream App Path. The connection info is now read from the sxRelease folder instead of the local ActiveERP folder, which allows it to use the updated connection info before the local ActiveERP folder is updated. This ensures that the correct SQL sxSystem database will be updated with the update state of the machine being updated, which eliminates the possibility of AutoUpdater running twice, because it would have updated the old sxSystem database on the first run.
6.4.46	03/13/2023	I2303162	Modified to eliminate an error that can occur when attempting to relaunch AppBox or OrderStream after applying updates.

AutoUpdaterServerInstaller.msi

Seradex OrderStream

Technical Release Notes

May 2023

6.4.2	03/09/2023	I2202154	Updated to improve the descriptions of the fields on the data entry screen (Release name and Port) and make better use of the screen real estate to ensure that descriptions are not cut off.
Config.dll			
6.4.202	03/14/2023	I2302387	Corrected issue whereby reconfigure can lose the original item spec props on the original spec and duplicate it onto the new spec.
6.4.203	04/21/2023	I2302302	Corrected an issue that causes auto configurator processed line items to be flagged as successfully processed with no errors, although no bill of materials are created.
		I2207074	Updated the detail OwnerType text that was being used for Service Order configurator.
		I2301325	Added the clearing of the Input worksheet property values when clearing the configurator form control values via the menu item.
		I2204171	The auto processor will now prompt users to confirm updating line item pricing when reconfiguring from estimate and sales order, depending on the application preference: "Prompt to update line item pricing when configuring"
CreditNote.dll			
6.4.137	04/21/2023	I2301279	The net price value will no longer be lost when updating an existing credit note document.
CRM.dll			
6.4.143	04/21/2023	I2304170	OppSub menu item now hidden by default.
CRMOutlook365MailReaderService.msi			
6.4.3	02/22/2023	I2210215	Modified to ensure that the Installer uses an up to date version of the TLS (Transport Layer Security) protocol. Also, updated the service to use the latest Microsoft Graph and Identity Client libraries.
Database Setup Wave 0.xls			
6.4.4	04/21/2023	I2303130	Update to address an issue with the import of CompanySetup info from the standard Wave 0 import.
Database Setup Wave 0.xlsm			
6.4.4	04/21/2023	I2303130	Update to address an issue with the import of CompanySetup info from the standard Wave 0 import.
Database Setup Wave 1.xls			
6.4.3	04/21/2023	I2303130	Updated to cleanup and remove ItemExtra from the standard Wave 1 import.

Seradex OrderStream

Technical Release Notes

May 2023

Database Setup Wave 1.xlsm

6.4.4 04/21/2023 I2303130 Updated to cleanup and remove ItemExtra from the standard Wave 1 import.

DataTransfer.mdb

6.4.304 02/28/2023 I2302304 Updated core receiving generator search to ensure qty received uses the rounding units

6.4.305 04/25/2023 I2202299 A void comment field has been added to the ARPayment table.
 I2212015 Reverted Modules.HasUserDefined for Cell module to False
 I2301234 Adjusted MatReqAuditTrail Report main query
 I2301238 Increased the number of characters for CustomExe.ClassName from 50 to 100 to accommodate the fully qualified class names required by .Net custom hooks.

I2207053 Added RopeLengthFactor to CellLinks.

I2301292 Add an index to the ApplIntegrationData table to improve performance as the table size increases.

I1905035 Added Cascade-Delete foreign keys to ImportOrderDetails and ImportOrderPropertyDetails against table ImportOrder and a non-cascade-delete to ImportOrderDetails against ImportOrder table

I2212151 Add UserPreferences table to the sxSystem database.

I2202286 Add AllowBOMOnBuyOnly to items and itemspecs as well as Adjusted the integrity check 'Items - Buy Items With Bills of Material' to ignore buy items flagged to allow bill of materials.

I2301155 Created data transfer records to default all the retail pricing fields in estimate and sales order to 0, to be consistent with all Seradex float data type fields.

I2101189 Modified the name and solution of the integrity check that examines the system paths for windows compatibility.

I2302096 Add Cascade Delete Constraints to ContactLog for the prospect and customershipto table for contact log to be deleted when a prospect or shipto is deleted.

I2208184 Added a Localization Value for the Sales Order Cancelled status message that will now display at the top of the Sales Order page for a cancelled order.

I2210060 Added a translation for the error message to let a user know the account they are trying to create/login with is linked to multiple active customers which is not allowed

I2103358 Set the Include field to False for the integrity check "Items with Multiple Operations within its Labour Schedule that have ExcludeFromFiniteScheduling Unchecked".

I2301052 ActivityLog.ocx added to sxsystem VersionDllList

I2211178 Added ERP Anywhere as an Application, added Login Groups for ERP Anywhere.

I2212287 Added core secured controls records to hide the Credit Note approval button and menu item.

I2212147 Modified and added a lot of localizations for error messages for DBOX.

I2301317 Modified the based SFE table and query to add the new InvTrackingOption to be able to determine in a more reliable way the item types.

I2301313 Added 30,60,90 days transaction view records to the TransactionViews table for default transaction documents load list in Estimate and Sales Order

Seradex OrderStream

Technical Release Notes

May 2023

6.4.305 04/25/2023 I2303032

Removed unused foreign keys for shipping detailId in Work order, Invoice and Receiving Lot serial tables which can affect performance of deleting shipping lines.

DBox Web Front End Components (WFE)

6.4.38 04/25/2023 I2302182

Fixed an issue where the app service was not included in the service order dialog causing the creation of a service order ticket impossible in DBOX.

I2209134

The Sell Items page will now properly render on small screens, all columns will be visible and can be scrolled.

I2205045

Fixed an issue with Search not being able to be scrolled in DBOX on touch screens.

I2210185

Added support for opening the DBOX Configurator via Order Stream.

I2212076

When disabling NewsAndEvents in security, the home page should now render as expected. Tile resizing should also change depending on whether or not NewsAndEvents is enabled.

I2302008

Added https:// to the front of remote file attachment URLs

I2302232

Fixed an issue causing the Leads page to not open in DBOX.

DC2001.dll

6.4.63 04/21/2023 I2304034

Only lines with a start and finish date will be recalculated to reflect operation's Completed status.

I2301317

Modified to ensure that the Data Collection labour procedure pays attention to the lot/serial numbers stored in the WorkOrderLotSerialInventory table when completing lot/serial lines from the Shop Floor Execution module.

Estimating.dll

6.4.197 04/21/2023 I2204171

The auto processor will now prompt users to confirm updating line item pricing when reconfiguring from estimate and sales order, depending on the application preference: "Prompt to update line item pricing when configuring"

ImportData.exe

6.4.3 04/21/2023 I2303131

Modified to allow the manually selected SQL Server and database to be used. Updated the "Connect to Server" dialog to the latest version for ease of use.

Infragistics4.Documents.Core.v22.2.dll

6.4.0 03/07/2023 I2209317

Release Infragistics 2022.2

Infragistics4.Win.v22.2.dll

6.4.0 03/07/2023 I2209317 Release Infragistics 2022.2

InventoryAdjustment.dll

6.4.107 04/21/2023 I2303282 Modified the Save routine to trim leading and trailing spaces of all lot and serial numbers before writing them to the database.

InventoryTransfer.dll

6.4.121 04/21/2023 I2212073 Altered Items transfer to not load discontinued items by default, to view both there is a new menu option in the tools menu similar to inventory adjustment.

Invoice.dll

6.4.187 02/21/2023 I2302289 Corrected issue whereby Invoice Auto Posting did not fire off for invoices that did not directly require inventory update

6.4.188 04/21/2023 I2209199 Adjusted application of deposit invoice lines to use the header tax group of the deposit invoice if the detail line has no dedicated tax group in case the deposit invoice tax was changed from the original creation of the deposit.

ItemEditor.dll

6.4.160 04/21/2023 I2108101 The Item Editor > Subcomponent spread will no longer show the Weight field with an inappropriate currency symbol.

I2202286 Added a new field to item editor to allow for bill of materials on buy non make tracked regular items. This feature allows a buy item to have a bom for use in modules such as service order.

I2212005 Add prompt if save button is enabled on close button press

MatReq.dll

6.4.151 03/30/2023 I2302362 Modified to implement the divisional GL Account logic when creating MR lines from the MR main module user screen.

6.4.152 05/04/2023 I2202286 Ensure boms marked as buy only with a bom are excluded from mat req and MRP calculations.

Seradex OrderStream

Technical Release Notes

May 2023

6.4.152	05/04/2023	I2301235	Modified MatReq to use only a StatCode available to the PO module when generating a PO and setting its StatCode to "Open".
		I2202304	Subcontract parent item quantity on PO will now be included in the MRP and Forecasting MRP forms. The Export and MRP Report menu options have been hidden in the Forecasting MRP form as they are not currently implemented.
		I2209128	A First Order by Date column has been added to forecast MRP to show the date the inventory level will fall to or below the reorder point, less the vendor's lead time.
POInvoice.dll			
6.4.133	04/21/2023	I2209118	Corrected the sequence of calls to set the vendor for the ActivityLog control when appropriate.
QFEScriptEncryption.exe			
6.4.1	03/07/2023	I2302230	Upgraded to Infragistics 2022.2
QFEScriptExecuter.exe			
6.4.1	03/07/2023	I2209317	Upgraded to Infragistics 22.2
Receiving.dll			
6.4.165	04/21/2023	I2110161	Added handling to allow the POInvoice form to be opened from Receiving.Net form.
RptPurchasing.dll			
6.4.38	04/21/2023	I2301234	Edited report data to match new query
SalesOrder.dll			
6.4.240	02/17/2023	I2302255	Modified to ensure the work order's UserModified is filled in in all cases when a work order is updated from a sales order.
		I2301311	Modified to ensure that the UserCreated is always filled in when a work order is generated.
6.4.241	03/20/2023	I2303230	Corrected issue wherby picking a ship to via the header ship to drop down does not handle ship to taxes.
6.4.242	03/30/2023	I2302362	Modified to implement the divisional GL Account logic when generating MatReq data from the Sales Order module.
6.4.243	04/21/2023	I2204171	The auto processor will now prompt users to confirm updating line item pricing when reconfiguring from estimate and sales order, depending on the application preference: "Prompt to update line item pricing when configuring"
		I2202286	Ensure boms marked as buy only with a bom are excluded from mat req and MRP calculations.

Seradex OrderStream

Technical Release Notes

May 2023

6.4.243	04/21/2023	I2207260	Line quantity updates for sales orders with related work orders will now cascade to sub-work orders.
		I2201176	The customer credit limit notification has been added to the new sales order interface.
		I2301155	Modified clsSalesOrderFormLibrary.GetSalesOrderDetailsSQL to return 0 from the UnitPrice field when value is NULL.
Seradex.Accounting.QuickBooksLink.dll			
6.4.2	04/28/2023	I2303061	Removed the restriction for vendors to appear in update accounts only if the account number is filled in and changed to use the Display name vs Company Name for the vendor/customer names.
		I2303060	Updated QB online to obtain the login page from the new location.
Seradex.AddressSystem.dll			
6.4.12	04/21/2023	I2303219	Corrected issue whereby certain regions where a village is considered a neighborhood of a larger location, but the API does not state the larger location, will not find the city.
Seradex.Aspose.dll			
6.4.4	04/21/2023	I2302321	Added the code to calculate formulas after writing the input data to Input worksheet when using Aspose for line item pricing
Seradex.AutomatedScanner.dll			
6.4.4	03/07/2023	I2209317	Upgraded to Infragistics 22.2
Seradex.AutoUpdater.ReleaseFileList.dll			
6.4.5	03/09/2023	I2007120	Enhanced to allow loading files from an untrusted network location to correctly detect if the files require registration, for example, when Internet Explorer Enhanced Security Configuration is enabled, or when accessing the files from a machine specified via a FQDN or IP address.
		I2202154	Modified to record nested exception messages in the event log when cleaning up and removing the secondary app domain. Modified to eliminate an "Index was outside the bounds of the array" exception, and the subsequent "Object reference not set to an instance of an object, that can occur sometimes in the Server service.
		I2101213	Additional modifications to try to prevent AccessViolationExceptions when reading file information.
Seradex.AutoUpdater.UpdateClient.dll			
6.4.9	03/09/2023	I2202154	Modified to prevent a potential "Index was outside the bounds of the array" exception.

Seradex OrderStream

Technical Release Notes

May 2023

6.4.9	03/09/2023	I2101213	Modified for compatibility with the change done to prevent AccessViolationExceptions when reading file information in the Seradex.AutoUpdater.ReleaseFileList.dll
		I2007120	Updated the detection of the OS that is displayed on the Manual Update screen (Windows 10 and Server 2019 improved, Windows 11 and Server 2022 added). Modified to record nested exception messages in the event log when cleaning up secondary app domains. Enhanced to allow untrusted network locations.

Seradex.BaseSystem.dll

6.4.59	04/21/2023	I2204257	Extended support of message box handling for back end processes.
		I2303395	Enhanced internal functionality to add additional features.
6.4.60	05/01/2023	I2212288	Added extension method to clean up Data Set objects.

Seradex.ComComponents.dll

6.4.57	04/21/2023	I2303395	Modified to use the external Interop.sxProxy.dll instead of embedding it.
		I2208099	Launching a one click email from the new sales order form will now update the emailed flag on the sales order.

Seradex.CommonServices.dll

6.4.79	03/07/2023	I2209317	Upgraded to Infragistics 22.2
6.4.80	04/21/2023	I2301382	Corrected issue where not all advanced date formats/restart periods worked and corrected error if the last known key was in a month that is not 31 days and the next key is not done until a later month where the current day did not exist in the last key month.
		I2302007	Add new Application Preference, Default SO Contact to Ship To Contact.
		I2211246	Corrected error if Genkey had a prefix greater than one character and the last was a number, then removing that number from the setup form leaving the last key alone, an error would occur attempting the next key.
		I2212292	Adjusted the core API logic to send requests to wait up to 4 minutes before failing as opposed to the current limit of 1 minute and 40 seconds
		I2208125	Rounding units can now be loaded by field name.
		I2210253	Modified the application preference that causes non-stock Lot/Serial items allocated to a sales order to be automatically assigned to a shipment to handle stock items as well.
		I2212151	Add functionality to save bitwise preferences.

Seradex.Connection.dll

6.4.51	04/21/2023	I2212151	Add dedicated sxSystem database connection handling.
		I2206358	Added a function to return the list of columns of the supplied SQL query.

Seradex.Dbox.dll

6.4.40	04/25/2023	I2303066	Added a conditional argument during the startup of DBOX that makes it backwards compatible with Clarify.
		I2212147	Cleaned up the error messages in DBOX to make it consistent and to ensure that every expected error message has a Localization/Translation.
		I2301340	Corrected an issue adding a config child item in Dbox and saving without any user changes to the parent or child to no longer save the incomplete configuration when saving/closing the page.
		I2301299	Corrected an issue with Customer Config property defaults erroring when the property type was a Yes/No property.
		I2202256	Added Support for ERP Anywhere to generate consignment receipts.
		I2301210	Description is no longer a required field for a Product Line
		I2302051	Fixed an issue where DocumentStorage objects would attempt to insert a custom value into the ID column when copying/converting an Estimate.
			Disabled automatic reconfiguring on copy Estimate. Changed the automatic reconfiguring on Convert Estimate to Sales Order to be opt-in based on a website preference.
		I2302111	Fixed an issue in the configurator API that was setting the wrong display value for a configurator grouping property.
		I2302008	Modified the remote file attachment function in DBOX to return a File result now instead of a regular 200 response to fix a difference with .NET 6.0
		I2302010	Corrected an issue where DBOX was assuming the Title could not be null on a Document Storage record.
			Corrected an issue where a deprecated security protocol was being allowed when sending email requests via SMTP
		I2211178	Added support for ERP Anywhere exclusive logins in the DBOX API.
		I2212017	Added a piece of code to make the dbox line item details freight or handling aware, so that they can be rolled up correctly to the header totals.
		I2202331	Temporary files created by DBOX will now be private with a pre-signed URL generated and given to the user, this link will be active for 24 hours. This change is only for temporary files such as Reports, and ICS files for Activities. If a permanent file is needed there are options to download the file to your local machine..
		I2205045	Changed how the home dbox page is rendered. Previously if a home chart was set to not be viewable (through security settings) it would leave a blank space where the chart originally would have been rendered. Now, the charts will all move left to fill the empty space, so the gap will always be on the bottom right.
		I2207031	DBOX will no longer overwrite the Employee, Sales Rep or Contact on an Estimate or Sales Order with the logged in user's information when a different user than who created it modifies the transaction.
		I2208222	DBOX will now make sure to check the module activation information in the database upon login, rather than trusting the cache if the DBOXBase module is expired. This should prevent an issue where even if they license was applied it wouldn't let users login.
		I2111281	DBOX will now take the Employee's assigned location into account when creating an Estimate/Sales Order and adding items to said order.
		I2210236	Fixed an issue where DBOX would not properly determine if an Item was a Freight or Handling item, leading to incorrect Freight/Handling pricing until the Auto Processor processed the Quote/Order

Seradex OrderStream

Technical Release Notes

May 2023

6.4.40	04/25/2023	I2302115	Implemented the single property value auto defaulting feature in Dbox, as supported in Order Stream
		I2302356	Fixed an issue where the Create user email was expecting certain data that hadn't been loaded causing the email to fail to send.
		I2301245	Fixed a regression where Automatic Freight/Handling charges weren't being flagged as such causing potential duplicate freight/handling charges.
		I2302116	Since Amazon S3 is case sensitive, if a Product Line's ExcelSheetName field had different casing from the physical file it would fail to find the Excel Sheet in Amazon storage. Now when uploading a Config Sheet to DBOX it updates all the Product Lines that have the same Excel Sheet Name to have the same casing as the physical file.
		I2205136	Modified the URL from Dbox to third party configurator web sites to include a value that will allow the configurator to be aware of the fact that the user using Dbox is either an employee or not, and to display the pricing update prompt for customers only, and not employees

Seradex.EstimateSystem.dll

6.4.30	04/21/2023	I2006010	Included the call to update the margin % in Estimating/SalesOrder when the Cost Override Qty is changed
		I2302269	Implemented the required code to migrate the parent line item references from the original transaction to the new transaction when an estimate is copied
		I2208125	Price and quantity rounding units are now loaded from the database.
		I2212056	Added logic to prevent duplicate keys if a user sets a key that will be reached in the future either by using Manual key prompt or change key in transaction override.
		I2211086	Added extra handling to prevent NULL values of RetailUnitPrice or RetailDiscountPct from being converted to a number type.
		I2301348	Pricelist commissions will now be saved when applicable.
		I2301155	Modified GetEstimateDetailSelectCommand commandtext and clsSalesOrderFormLibrary.GetSalesOrderDetailsSQL to return 0 from the UnitPrice field when the value NULL. Corrected issue in EstimateDetails and SalesOrderDetails DetailColumnChanged events to not reverse calculate prices when there is no margin, as margin is required to correctly reverse calculate line item pricing.
		I2201264	Corrected an issue in Estimate and Sales Order generation that caused freight vendor information to not load correctly in estimate and to transfer correctly when generating sales order from estimate
		I2206358	Prevent Add Additional Charges functionality from running if the estimate has a related sales order. Improved performance of the Add Additional Charges functionality.
		I2304143	Prevented one validation routine from attempting to return information on an empty set of items.
6.4.31	05/01/2023	I2212288	Streamlined and improved the UOM combo data loading behaviour.

Seradex.Financials.FinancialsSystem.dll

Seradex OrderStream

Technical Release Notes

May 2023

6.4.129	04/21/2023	I2303023	Corrected anomaly with the alternative deposit import format with the extra fields for validation where the total values being added up end up with a precision error.
		I2212291	Adjusted non deposit invoices that have deposit/job billing applications that are in a nexus state to exclude the deposit application itself from the online tax system assuming the deposit invoice itself was exempt.
		I2212011	When adding a new tax authority for online tax, obtain the default vendor as one defined on another authority for the jurisdiction.
		I2202299	When voiding a payment, a note can now be entered.

Seradex.Financials.TransactionPosting.dll

6.4.3	02/21/2023	I2302279	Corrected issue with receiving auto posting when approving more than one receipt during a receiving session.
6.4.4	02/24/2023	I2302316	Corrected posting error for receipts with no vendor.
6.4.5	04/25/2023	I2304248	Corrected issue if using Accpac 5.6 or before yet enabled financials and used the newer Fiscal locking my module feature for future periods then changed back to Sage.

Seradex.Infragistics.dll

6.4.60	02/23/2023	I2302309	Data Validation will now only run against details in the following scenarios: validation occurring on save and the row was added/modified, header controls are used to validate the details, or the validation is occurring on approval.
		I2302299	Ensure newly added rows are validated. Ensure detail level approval validation runs regardless of the row modified state.
6.4.61	02/24/2023	I2302238	Corrected issue whereby tabbing onto a editable field in Modules such as Financials and search based forms, typing in a character no longer enters edit mode.
		I2302257	Ensured for any numeric field that is editable and makes use of the system rounding units, when the user edits the rounding units matches the display.
		I2302239	The Copy, Cut and Paste abilities will be reinstated in the base .Net grid control.
6.4.62	03/07/2023	I2209317	Upgraded to Infragistics 22.2
6.4.63	04/21/2023	I2207252	Pressing "1" on a date field in a grid will no longer begin editing the cell with the value "01".
		I2212241	Set combo columns to non-MultiLine to ensure type ahead behaves as expected. Increase size of grid row header to accommodate orders with over 10k lines and bolded row numbers.
		I2212151	Add the ability to prevent Enter from moving to the next row while editing a textbox in a grid.
		I2301015	Added sxDate control to better control when to fire the date changed event.
		I2304074	Added an exception for grid columns tagged "Priority" to exclude them from numeric non-integer handling required to prevent up/down arrow actions.
6.4.64	04/28/2023	I2212077	The Caps Lock key will now be observed when initially typing into a cell not in Edit mode.

Technical Release Notes

May 2023

Seradex.Inventory.Adjustment.dll

6.4.8 04/21/2023 I2210090 The inventory adjustment system has been updated to better integrate with the inventory transfer system.

Seradex.Inventory.dll

6.4.42 04/21/2023 I2207260 If a work order line quantity update decreases a sub-work order line quantity to the quantity already completed, remaining inventory allocated to the sub-work order will be deallocated.

I2302102 Updated the ReleaseAllocatedInventory method to match the VB6 version. Modified to allow use in more scenarios. Improved the efficiency of the Inventory de-allocation.

I2304038 Corrected issue receiving directly to sales order ownership when drop ship is enabled and improved performance of receiving onto sales order ownership.

I2303304 Corrected issue where relieving negative or allocating to the batch where the inventory record has a null in either rack or bin.

I2301317 Modified to add a new enumeration for the inventory tracking types.

I2204257 Shipping now supports consuming inventory from mobile applications.

6.4.43 04/26/2023 I2304267 Corrected issue checking for negative inventory if the shipment contains unallocated regular tracked product line items.

Seradex.Inventory.Transfer.dll

6.4.6 04/21/2023 I2210090 The transfer system has been updated to support inventory containers.

Seradex.InvoiceSystem.dll

6.4.33 04/21/2023 I2301089 Corrected issue when generating invoices for orders where the rate was different, the rate is not always the rate as of today.

Seradex.Library.dll

6.4.29 04/21/2023 I2212151 Add sxSystem table objects.

Seradex.MaintenanceToolsSystem.dll

6.4.0 04/21/2023 I2212151 Add functionality to facilitate loading and saving of user preferences.

Seradex.MasterApi.dll

6.4.11 04/25/2023 I2207216 Added support for deploying the .Net 6.0 DBOX API

I2301066 The MasterAPI will now check that the Release Folder being passed to it as an argument is valid against the actual physical folders on the server rather than a predetermined/hard-coded list.

I2212117 Added an app_offline.htm file to internal DBOX deployments so that DLLs are freed up to allow updates to go through even when the website is being used.

Technical Release Notes

May 2023

Seradex.Messaging.dll

6.4.5 03/07/2023 I2209317 Upgraded to Infragistics 22.2

Seradex.OrderEntry.Bases.dll

6.4.26 03/07/2023 I2209317 Upgraded to Infragistics 22.2
6.4.27 04/21/2023 I2212255 Corrected an issue that causes an invalid employee error message pop up when opening Delivery schedule
I2301155 Modified GetEstimateDetailSelectCommand commandtext and clsSalesOrderFormLibrary.GetSalesOrderDetailsSQL to return 0 from the UnitPrice field when the value NULL.
Corrected issue in EstimateDetails and SalesOrderDetails
DetailColumnChanged events to not reverse calculate prices when there is no margin, as margin is required to correctly reverse calculate line item pricing.
I2301348 Add properties to the generic OrderEntry objects for data required by commissions saving.

Seradex.OrderEntry.SalesOrderEDI.dll

6.4.23 03/07/2023 I2209317 Upgraded to Infragistics 22.2

Seradex.OrderEntryLibrary.dll

6.4.32 04/21/2023 I2301348 Add the ability to save commissions from the Pricelist Excel file.
I2301155 Modified GetEstimateDetailSelectCommand commandtext and clsSalesOrderFormLibrary.GetSalesOrderDetailsSQL to return 0 from the UnitPrice field when the value NULL.
Corrected issue in EstimateDetails and SalesOrderDetails
DetailColumnChanged events to not reverse calculate prices when there is no margin, as margin is required to correctly reverse calculate line item pricing.
I2207074 Corrected issue when selecting an item in Service Order that required the item have both a Price List and Price UOM value.

Seradex.ProductConfigurator.dll

6.4.14 04/21/2023 I2302302 Corrected an issue that causes auto configurator processed line items to be flagged as successfully processed with no errors, although no bill of materials are created.

Seradex.Production.Bases.dll

6.4.6 03/07/2023 I2209317 Upgraded to Infragistics 22.2

Technical Release Notes

May 2023

Seradex.Production.Calendar.dll

6.4.18 03/07/2023 I2209317 Upgraded to Infragistics 22.2

Seradex.Production.DataCollection.dll

6.4.66 03/06/2023 I2303018 Corrected issue whereby if the immediate prior operation is either non tracked or optional because of percent complete zero and the one before is also skipped, the operation does not appear in Shop floor.

6.4.67 03/14/2023 I2302181 Modified to eliminate an issue loading data when one operation has many splits, and to improve the speed of loading the data.

6.4.68 03/28/2023 I2303235 Report options have been restored on events in shop floor execution.

6.4.69 03/31/2023 I2303341 Modified to eliminate an issue where an operation is treated as the final operation when the next op has multiple pre-ops.

6.4.70 04/21/2023 I2303395 Modified to use the external Interop.sxProxy.dll instead of embedding it.
I2301317 Modified to correct some issues with the barcode logic to ensure that it works properly for lot/serial items.
I2210029 Modified to be able to suppress the unnecessary prompts that ask the user to continue when processing in scanning mode.

Seradex.Production.dll

6.4.9 05/05/2023 I2207053 Moved common cell update functionality to this assembly to allow it to be used by scheduling.

Seradex.Production.Maintenance.dll

6.4.8 03/07/2023 I2209317 Upgraded to Infragistics 22.2

Seradex.Production.ProductionTracking.dll

6.4.16 03/07/2023 I2209317 Upgraded to Infragistics 22.2

Seradex.Production.PunchClock.dll

6.4.18 03/07/2023 I2209317 Upgraded to Infragistics 22.2

Seradex.Production.Rework.dll

6.4.21 03/07/2023 I2209317 Upgraded to Infragistics 22.2

Seradex.Production.Scheduling.dll

6.4.89 03/07/2023 I2209317 Upgraded to Infragistics 22.2

6.4.90 04/21/2023 I2207053 Modified to add Rope Length to drum cell changer UI.

6.4.91 05/05/2023 I2207053 Modified to improve the cell changer functionality. It can now be used with sub workorders which will update the entire work order, sub work order chain.

Seradex OrderStream

Technical Release Notes

May 2023

Seradex.Production.WorkOrder.dll

6.4.43	03/23/2023	I2303283	Corrected a core validation query.
6.4.44	04/21/2023	I2207053	Modified to add Rope Length to the multi-cell changer UI.
		I2007270	When uncompleting a work order in rework, if the original WIP had user defined values, restore the inventory with the same User Defined values.
		I2211310	When performing rework actions that require work order transactions such as uncomplete or scrap WIP, if a reason code is selected and that reason code happens to have a GL, then use that GL account to match how inventory adjustments from rework are done.
		I2207260	Work order line quantity updates will now cascade to sub-work orders.
		I2301078	Replace message box from VB6 on saving workorder (leaving new grdMessageBox version)
6.4.45	05/05/2023	I2207053	Modified to optionally enable updating related open transactions.

Seradex.Purchasing.dll

6.4.37	03/30/2023	I2302362	Modified to implement the divisional GL Account logic when creating purchase order detail lines from the main purchase order user screen.
6.4.38	04/21/2023	I2303022	Altered Po to ensure if a new line is added to a Received or invoiced PO and the default qty is kept, that the header status updates properly.

Seradex.Purchasing.MatReq.dll

6.4.2	04/21/2023	I2209232	Selective mat req lines will no longer be locked when the quantity increase is the same as the quantity already on mat req.
-------	------------	----------	---

Seradex.Purchasing.PurchasingEDI.dll

6.4.2	03/07/2023	I2209317	Upgraded to Infragistics 22.2
-------	------------	----------	-------------------------------

Seradex.Purchasing.ReceivingSystem.dll

6.4.38	02/28/2023	I2302317	Corrected issue when receiving a receipt that spans multiple Purchase orders at the same time that the AP accrual GL was incorrect.
		I2302347	Corrected issue receiving regular tracked inventory where there is a rack bin specified on the receiving line and there is nothing in the receiving lot serial allocation for that line, it would not use the rack/bin stated.

Seradex.RestApi.dll

6.4.34	04/25/2023	I2301056	Fixed an issue where DBOX wasn't properly maintaining the timezone of the SQL Server when passing data around so occasionally dates would drift out of sync.
		I2210185	Added functions to ensure that the DBOX Configurator has been launched from Order Stream when trying to access the DBOX Configurator without logging in to DBOX.

Seradex OrderStream

Technical Release Notes

May 2023

6.4.34	04/25/2023	I2211178	Added support for ERP Anywhere exclusive logins in the DBOX API.
		I2302052	Added XML content encoding back to DBOX since it was removed in .NET 6.0 and certain clients relied on it.
		I2302051	Fixed an issue where DocumentStorage objects would attempt to insert a custom value into the ID column when copying/convertng an Estimate.
			Disabled automatic reconfiguring on copy Estimate. Changed the automatic reconfiguring on Convert Estimate to Sales Order to be opt-in based on a website preference.
		I2302008	Modified the remote file attachment function in DBOX to return a File result now instead of a regular 200 response to fix a difference with .NET 6.0
		I2301210	Added any model validation failures for the configurator into the error response of the API.
		I2212147	Cleaned up the error messages in DBOX to make it consistent and to ensure that every expected error message has a Localization/Translation.
		I2303098	Fixed an issue where response compression wasn't being used for the configurator in cases where the data exceeds a certain size threshold.
		I2303066	Added a conditional argument during the startup of DBOX that makes it backwards compatible with Clarify.
		I2304177	Corrected an issue that caused a custom Job Costing API route to be unreachable because .NET 6 could not determine which route was correct.

Seradex.SalesOrderSystem.dll

6.4.41	03/02/2023	I2303006	Added a qualifier that there be one or more lines present before validating lines' ShipTo agreement, preventing a potential error.
6.4.42	04/21/2023	I2201264	Corrected an issue in Estimate and Sales Order generation that caused freight vendor information to not load correctly in estimate and to transfer correctly when generating sales oder from estimate
		I2206358	Improved performance of the Add Additional Charges functionality.
		I2303215	Added handling to allow for SalesOrderDetails.DiscountPct having a NULL value.
		I2303006	Removed an unnecessary call to save the SalesOrder document after generating Material Requisition.
		I2205313	The SalesOrder > Tools > Move SO Lines to Other SO function will now limit the destination SO to those with the same job (or no job at all, if the source SO is also not associated with any job).
		I2301348	Pricelist commissions will now be saved when applicable.
		I2301155	Modified GetEstimateDetailSelectCommand commandtext and clsSalesOrderFormLibrary.GetSalesOrderDetailsSQL to return 0 from the UnitPrice field when the value NULL.
			Corrected issue in EstimateDetails and SalesOrderDetails DetailColumnChanged events to not reverse calculate prices when there is no margin, as margin is required to correctly reverse calculate line item pricing.
		I2208125	Price and quantity rounding units are now loaded from the database.
		I2212056	Added logic to prevent duplicate keys if a user sets a key that will be reached in the future either by using Manual key prompt or change key in transaction override.
		I2211086	Added extra handling to prevent NULL values of RetailUnitPrice or RetailDiscountPct from being converted to a number type.

Seradex OrderStream

Technical Release Notes

May 2023

6.4.42	04/21/2023	I2006010	Included the call to update the margin % in Estimating/SalesOrder when the Cost Override Qty is changed
		I2302269	Implemented the required code to migrate the parent line item references from the original transaction to the new transaction when a sales order is copied
		I2302004	Generating a shipment from the sales order tools menu will no longer create multiple shipping documents if multiple shipping comments are saved against the sales order.

Seradex.Search.dll

6.4.91	03/07/2023	I2209317	Upgraded to Infragistics 22.2
--------	------------	----------	-------------------------------

Seradex.Shipping.dll

6.4.24	02/21/2023	I2302282	Corrected issue when using customer part numbers and one or more lines on the sales order does not have a customer part number saved against the sales order line.
6.4.25	04/21/2023	I2301303	Restored functionality to push the shipment's BillOfLading value into the BillOfLading field of a shipment's related invoice.
		I2210253	Modified shipping to allow stock and non-stock Lot/Serial items allocated to a sales order to be automatically assigned to a shipment when the application preference is set.
		I2204257	Shipping now supports consuming inventory from mobile applications.
6.4.26	04/26/2023	I2304267	The .Net shipping backend has been updated to correctly identify systems using consolidated work orders.
6.4.27	05/03/2023	I2304278	When approving a shipment that would produce negative inventory, a message stating inventory will go negative will now only appear when the application preference to allow negative inventory is enabled.

Seradex.SpecBuilder.dll

6.4.9	04/21/2023	I2202286	Ensure the AllowBOMOnBuyOnly field transfers to the item spec on spec creation.
-------	------------	----------	---

Seradex.Strings.dll

6.4.52	04/21/2023	I2210253	Modified the application preference that causes non-stock Lot/Serial items allocated to a sales order to be automatically assigned to a shipment to handle stock items as well.
		I2212151	Add UserPreference enum.
		I2302007	Add new Application Preference, Default SO Contact to Ship To Contact.

Seradex.UserDefined.dll

6.4.17	03/07/2023	I2209317	Upgraded to Infragistics 22.2
6.4.18	04/21/2023	I2301063	User defined drop down boxes will now have their lists populated when users tab into the control to enable the type-ahead.

Technical Release Notes

May 2023

6.4.58 04/21/2023 I2302028 Modified the Invoice Workflow control to be loaded with the current date by default when loaded for the first time.

Seradex.Win.ItemAlternates.dll

6.4.2 03/07/2023 I2209317 Upgraded to Infragistics 22.2

Seradex.Win.ItemEditor.dll

6.4.3 03/07/2023 I2209317 Upgraded to Infragistics 22.2

6.4.4 04/21/2023 I2212135 Added validation to the Divisions lookup and the Item Division Setup form to prevent incomplete data from being entered.

Seradex.Win.MailMerge.dll

6.4.13 03/07/2023 I2209317 Upgraded to Infragistics 22.2

Seradex.Win.MaintenanceTools.dll

6.4.16 03/07/2023 I2209317 Upgraded to Infragistics 22.2

6.4.17 04/21/2023 I2212135 Added validation to the Divisions lookup and the Item Division Setup form to prevent incomplete data from being entered.
I2212151 Add a new User Preferences form.

Seradex.Win.MatReq.dll

6.4.3 03/07/2023 I2209317 Upgraded to Infragistics 22.2

Seradex.Win.NonConformanceManager.dll

6.4.30 03/07/2023 I2209317 Upgraded to Infragistics 22.2

Seradex.Win.OrderEntryFormLibrary.dll

6.4.6 03/07/2023 I2209317 Upgraded to Infragistics 22.2

6.4.7 03/30/2023 I2303330 Modified the date format used to store a webrequest record for web configurator, to not depend on the system user date format, and to use sql server format.

6.4.8 04/21/2023 I2304215 Reverted the web browser control from the WebView2 to the original WebBrowser control, for clients that originally used the the WebBrowser control

Seradex.Win.Packaging.dll

6.4.7 03/07/2023 I2209317 Upgraded to Infragistics 22.2

Seradex OrderStream

Technical Release Notes

May 2023

Seradex.Win.Production.dll

6.4.9 03/07/2023 I2209317 Upgraded to Infragistics 22.2

Seradex.Win.ProspectImport.dll

6.4.24 03/07/2023 I2209317 Upgraded to Infragistics 22.2

Seradex.Win.Purchasing.dll

6.4.66 03/07/2023 I2209317 Upgraded to Infragistics 22.2

6.4.67 04/21/2023 I2111115 Made a few cosmetic changes to the controls in the ShipTo frame.
I2212223 Adjusted Location MRP logic to work if the locationID field in the base query was setup as [Locationid]

I2202304 The Item Type property will no longer be a determining factor for whether an item will appear in the PO form line item combo or not.

Seradex.Win.QuickConfigurator.dll

6.4.35 03/07/2023 I2209317 Upgraded to Infragistics 22.2

Seradex.Win.Receiving.dll

6.4.57 02/21/2023 I2302277 Corrected issue whereby Receiving was not letting values being entered such as Qty received in the receiving rounding units.

6.4.58 02/28/2023 I2302304 Corrected issue whereby Receiving Generator was not displaying the qty received using the rounding units.

6.4.59 03/07/2023 I2209317 Upgraded to Infragistics 22.2

6.4.60 04/21/2023 I2110161 Added handling to allow the POInvoice form to be opened from Receiving.Net form.

I2304061 Corrected issue launching Container Management from Receiving whereby it would close the connection.

Seradex.Win.RecurringTransaction.dll

6.4.26 03/07/2023 I2209317 Upgraded to Infragistics 22.2

6.4.27 04/21/2023 I2303070 Corrected issue whereby the percentage and current amount columns would not allow negatives nor the percentage editing beyond 2 decimals.

Seradex.Win.Reports.dll

6.4.26 03/07/2023 I2209317 Upgraded to Infragistics 22.2

Seradex.Win.SalesOrder.dll

6.4.52 02/17/2023 I2302240 Opening a sales order from Search no longer clears the Sales Order combo.

Seradex OrderStream

Technical Release Notes

May 2023

6.4.53	02/21/2023	I2302272	Corrected issue loading a sales order from Search/external modules where fields such as contact and status were blanked out if populated on the order. Also corrected launching an order from Job costing.
6.4.54	03/07/2023	I2209317 I2302378	Upgraded to Infragistics 22.2 Corrected issue where using both work order generation on approval and matreq on approval was requiring the user to save to generate matreq.
6.4.55	04/21/2023	I2301035 I2302241 I2209121 I2301015 I2201264 I2303373 I2304215 I2006010 I2302285 I2302007 I2208125 I2302122	Reconfiguring from the Tools menu will now apply changes to related work orders. Focus to the Bill To combo after clicking Add. Added an origin qualifier to the incoming SalesRep's Inactive status validation for the SalesOrder and Estimate forms. Updated all header date controls to use the new sxDate control. Corrected an issue in Estimate and Sales Order generation that caused freight vendor information to not load correctly in estimate and to transfer correctly when generating sales order from estimate Corrected issue whereby Expected Ship Date, Expected Arrival Date and Request date cannot be blanked out if not required. Reverted the web browser control from the WebViewer2 to the original WebBrowser control, for clients that originally used the the WebBrowser control Included the call to update the margin % in Estimating/SalesOrder when the Cost Override Qty is changed Added a validation to disallow users from opening the MV import form from the sales order module, if the selected document is approved. When the Default SO Contact to Ship To Contact preference is ON, the system will prioritize using the Ship To contact to set the sales order contact. When OFF, the Bill To contact will be prioritized. Price and quantity rounding units are now applied to the sales order details grid. Add the Tags & Keys menu and functionality to the Sales Order Tools menu.
6.4.56	04/28/2023	I2210210 I2301070 I2304319 I2302050	Apply all applicable VB6 Alt shortcuts to the .Net Sales Order form menus. Corrected issue with the "Save and continue" prompts when running reports or other actions that require a save where it would save but not continue with the action Transaction Commissions button location corrected to be next to the Sales Rep combo. Improved performance saving when the preference to use colour coding by item running balance is used. Also when looking at a bom in Sales order do not save unless the line is new.

Seradex.Win.Scheduling.dll

6.4.52	03/07/2023	I2209317	Upgraded to Infragistics 22.2
6.4.53	04/21/2023	I2207053	Modified to add Rope Length to drum cell changer UI.
6.4.54	05/05/2023	I2207053	Modified to improve the cell changer functionality. It can now be used with sub workorders which will update the entire work order, sub work order chain.

Seradex.Win.Scheduling.Finite.dll

6.4.36	03/07/2023	I2209317	Upgraded to Infragistics 22.2
--------	------------	----------	-------------------------------

Seradex OrderStream

Technical Release Notes

May 2023

6.4.37 05/05/2023 I2207053 Modified to add Rope Length to drum cell changer UI, and to improve the cell changer functionality. It can now be used with sub workorders which will update the entire work order, sub work order chain.

Seradex.Win.Search.dll

6.4.102 03/07/2023 I2209317 Upgraded to Infragistics 22.2

Seradex.Win.ServiceOrder.dll

6.4.16 03/07/2023 I2209317 Upgraded to Infragistics 22.2

6.4.17 04/21/2023 I2207074 A service order detail and item must now be selected when launching Configurator from the Service Order Material grid.

Seradex.Win.Shipping.dll

6.4.45 03/07/2023 I2209317 Upgraded to Infragistics 22.2

6.4.46 04/21/2023 I2212214 Freight information can now be updated on approved shipments.

I2204257 Shipping now supports consuming inventory from mobile applications.

I2304196 Removed validation (on save) to check if the shipment header should have a non-NULL SalesOrderID value.

Seradex.Win.ShopFloorExecution.dll

6.4.63 03/07/2023 I2209317 Upgraded to Infragistics 22.2

6.4.64 03/14/2023 I2302181 Modified to prevent loading data while typing an employee or cell to improve speed.

6.4.65 04/21/2023 I2301317 Modified to correct some issues with the barcode logic to ensure that it works properly for lot/serial items.

I2303395 Modified to report any load issues with sxProxy.

I2210029 Modified to suppress the unnecessary prompts that ask the user to continue when processing in scanning mode.

Seradex.Win.UIBases.dll

6.4.23 03/07/2023 I2209317 Upgraded to Infragistics 22.2

Seradex.Win.UserDefinedPropertyMaintenance.dll

6.4.29 03/07/2023 I2209317 Upgraded to Infragistics 22.2

Seradex.Win.WorkFlow.dll

6.4.14 03/07/2023 I2209317 Upgraded to Infragistics 22.2

Seradex OrderStream

Technical Release Notes

May 2023

Seradex.Win.WorkOrder.dll

6.4.43	03/07/2023	I2209317	Upgraded to Infragistics 22.2
6.4.44	03/13/2023	I2303161	Corrected issue with the work order combo not recognizing pasting of a work order or adding a new WO on manual creation of a work order.
6.4.45	03/30/2023	I2301319	Corrected issue loading a work order from external sources such as Sales Order or Search where it was loading the data twice. Also this corrects an issue where the progress form produces an error.
6.4.46	04/21/2023	I2210192	Validation has been added to the work order generator to warn users when to quantity to make exceeds the quantity remaining on the sales order.
		I2207053	Modified to add Rope Length to multi-cell changer UI.
		I2207260	Work order line quantity updates will now cascade to sub-work orders.
6.4.47	05/05/2023	I2207053	Modified to optionally enable updating related open transactions.

setup.exe

6.4.3	02/22/2023	I2210215	Modified to ensure that the Installer uses an up to date version of the TLS (Transport Layer Security) protocol. Also, updated the service to use the latest Microsoft Graph and Indentity Client libraries.
-------	------------	----------	--

Shipping.dll

6.4.177	04/21/2023	I2210253	Modified shipping to allow stock and non-stock Lot/Serial items allocated to a sales order to be automatically assigned to a shipment when the application preference is set.
		I2106260	Corrected issue where batch processing will not use the sales order properly as the flow key if shipping genkey is setup to flow from sales order.

SpecBuilder.dll

6.4.48	04/21/2023	I2202286	Ensure the AllowBOMOnBuyOnly field transfers to the item spec on spec creation.
--------	------------	----------	---

SubContracting.dll

6.4.67	04/21/2023	I2109287	When either the From or To Location in the Generate SC Documents form is changed, the related quantity for that line will be refreshed.
--------	------------	----------	---

sxLicense.exe

6.4.27	04/25/2023	I2301197	Licenses that are not shared among all sub companies can no longer be modified from the global view unless the tools menu option is set. The option is cleared on save, load, and undo. Additional modifications were made to try to prevent the inadvertant change of license data, including no longer saving unmodified license data.
--------	------------	----------	--

sxMaintenance.dll

Seradex OrderStream

Technical Release Notes

May 2023

6.4.152	04/24/2023	I2211178	Added additional functionality to the DBOX\Web Login tab to be able to register and manage ERP Anywhere user logins/groups.
		I2204171	The auto processor will now prompt users to confirm updating line item pricing when reconfiguring from estimate and sales order, depending on the application preference: "Prompt to update line item pricing when configuring"
sxMaintenanceControls.ocx			
6.4.42	04/21/2023	I2204171	The auto processor will now prompt users to confirm updating line item pricing when reconfiguring from estimate and sales order, depending on the application preference: "Prompt to update line item pricing when configuring"
		I2302007	Add new Application Preference, Default SO Contact to Ship To Contact.
		I2208125	Quantity and Price rounding units can now be saved for the estimate, sales order, and invoice modules.
		I2210253	Modified the application preference that causes non-stock Lot/Serial items allocated to a sales order to be automatically assigned to a shipment to handle stock items as well.
sxPhysical.dll			
6.4.42	04/21/2023	I2209206	Added a Reference field to each tag. Appended the concatenated Reference values to the adjustment line's comment.
sxProxy.exe			
6.4.32	04/21/2023	I2208099	Launching a one click email from the new sales order form will now update the emailed flag on the sales order.
sxRuntime.exe			
6.4.61	04/21/2023	I2212151	Add User Tools and User Preferences menus to the main OrderStream dashboard form.
SxRuntimeToSxSystem.exe			
6.4.2	03/07/2023	I2302230	Upgraded to Infragistics 2022.2
sxUserDefineds.ocx			
6.4.49	02/24/2023	I2302287	Corrected an issue that was halting the initial defaulting process when loading module user defineds
Template.xls			
6.4.15	04/28/2023	I2111210	Removed merged cells in FinalDataExport configurator template worksheet and cleaned up the cells and their formats

Seradex OrderStream

Technical Release Notes

May 2023

TemplateImportQueries.mdb

6.4.6 04/25/2023 I2303130 Updated to cleanup and remove ItemExtra from the standard Wave 1 import, and to address an issue with the import of CompanySetup info from the standard Wave 0 import.

WorkOrder.dll

6.4.222 02/15/2023 I2302173 Addressed an issue that prevented using item substitution on the Shop Floor Execution Transfer for sub workorders.

6.4.223 02/23/2023 I2301371 Modified to correct an issue when using the Batch Processor for work order completion together with the application preference: "Backflush additional Inventory to satisfy BOM Requirements", where the system was not seeing the inventory pre-allocated by the backflushing process and was allocating more causing double-consumption.

6.4.224 03/30/2023 I2302362 Modified to implement the divisional GL Account logic when generating MatReq data from the Work Order module.

6.4.225 04/21/2023 I2202286 Ensure boms marked as buy only with a bom are excluded from mat req and MRP calculations.

I2209109 Modified the work order completion process to allow consuming non-stock inventory allocated to a container.

I2211310 When performing rework actions that require work order transactions such as uncomplete or scrap WIP, if a reason code is selected and that reason code happens to have a GL, then use that GL account to match how inventory adjustments from rework are done.

I2007270 When uncompleting a work order in rework, if the original WIP had user defined values, restore the inventory with the same User Defined values.
