Seradex OrderStream
Technical Release Notes
November 2024

AcctMaintenance.dll

6.4.134	10/28/2024	I2404068	Changes in the CRM > Tools > Customer Tools > Customer Bill Tos grid can now be reflected in open sales orders and estimates.
		I2406052	Corrected CustomerShipTo update prompts.
		I2406132	The Customer ItemNo Maintenance form's Customer Item Prices > Comment header will no longer appear with different formatting.

ActiveM20.dll

6.4.157	10/28/2024	I2003118	Improved validation on category setup to prevent users from picking any form of invalid GL account including for Financials paying attention to the material GL account flag. Also update open Purchasing when a category has the default inventory GL changed or non inventory for non tracked.
		I2405083	Transaction override can no longer set the status of PO lines to invoiced or canceled if an uninvoiced receipt or vendor return exists.
		I2404160	Added support for opening Category Maintenance from Search.

ActivityLog.ocx

| 6.4.39 | 10/28/2024 | I2402192 | Modified the code reading the UDF control for validation purposes to accommodate that control's name in ActivityLog. |

AutomatedReports.exe

| 6.4.13 | 10/28/2024 | I2309034 | Added purging of the AutomationLog based on the LogRetention application preference. |

AutoProcessor.exe

| 6.4.10 | 10/28/2024 | I2405238 | Modified Auto processor.exe to auto run excel configurations without an interface, where an icon which only allows for Pause and Exit is placed in the system tray when running . |

BOMChangeRep.dll

| 6.4.9 | 10/28/2024 | I2402098 | The embedded BOM Change sub-report grouping was modified to first sort by LineNo. |

ClientReports.dll

| 6.4.105 | 10/28/2024 | I2310139 | When reports are launched from the SDD, the SDD temp table will now successfully link when SQL keywords are repeated in the query text. |

Config.dll

| 6.4.216 | 07/17/2024 | I2407162 | New product lines will no longer throw an exception on save validation. |

6.4.217	07/23/2024	I2407212	Corrected issues where saved values for query controlled properties do not show when the configurator is loaded for a saved line item
		I2312140	Corrected the implementation of the Items Batch Mastering module to ensure that input data is written correctly and the mastered items are created correctly.
6.4.218	07/26/2024	I2407269	Corrected issue in configurator where mastering an item when also using system assigned item numbers was not working.
6.4.219	07/30/2024	I2406084	When loading a product line item from the form and opening the configurator, product line properties will have their defaults applied if the item instance has not previously been configured.
6.4.220	08/13/2024	I2407323	Corrected issue whereby closing the excel sheet while in the configurator and when the sheet reopened it would not fire off events such as Import Runtime data.
6.4.221	08/21/2024	I2408010	Opt out of CopyUserConfigTemplates if source and destination are the same.
6.4.222	10/28/2024	I2408010	The Templates copying process will be bypassed except when the user is set up to have this done. It will also be bypassed if source and destination are the same.
		I2408155	Updated the copying of configurator templates feature when loading the configurator to not automatically copy config templates unless the user has been setup to do so in the configurator module. In the next configurator release this option can be set in the configurator setup module.
		I2408146	1. Enhanced configurator loading speed, for new and existing configurations. 2. Added a check to ensure that records in the ConfigBatch table, flagged to be processed by the external configurator, cannot be reconfigured from a transaction module, due to conflict issues between both features.
		I2408100	Updated to enhance configurator loading and query controlled properties loading speed.
		I2408212	When combo values are loaded by a sql query, the config system no longer defaults to require two data columns.
		I2408175	Updated to corrected an issue in the configurator that was throwing an error when you attempt to reconfigure orders from the job costing module.
		I2407243	Updated the configurator to ensure that Property Disabling/Enabling is the last event performed after initial defaults or existing configured values are loaded and Runtime data is imported.
		I2409025	Corrected an isue in the configurator that was updating the master item description, instead of just it's itemspec's description, when reconfiguring transaction line items that are mastered.
		I2408029	Loading existing configurations sometimes throws error messages in the configurator depending on some setup's utilizing runtime data import to load excel based property values. Loading existing configurations sometimes incorrectly enables/disables property controls depending on some setup's utilizing runtime data import
		I2409048	Added a check with a message prompt, to ensure that records in the ConfigBatch table, flagged to be processed by the external configurator, cannot be reconfigured from a transaction module, due to conflict issues between both features.
		I2410110	Corrected an issue in the configurator where loading an existing configuration does not actually show the saved property values for AllowSpecial properties that have the auto default single list values option turned ON.

6.4.222	10/28/2024	I2407244	Implemented support to allow text box contols to trigger loading of query controlled property combos in the configurator form
		I2407020	Modified to add a new combo box "Routing Group" to the Product Line Maintenance screen to be able to assign a routing group to a Microvellum or Cabinet Vision product line.
			Also, added two new menus to set up the routing groups and the phantom items against the product lines.
		I2407137	Corrected an issue configurator setup grid that was disabling the drop down view in the property default column when you click on a cell that has selectable values
		I2407227	Updated config to properly set the flag in cell Input cell J52 when auto processing without an interface with excel.
		I2407107	Exclude Search and Replace checkbox will no longer be disabled by default in the Config Properties form.
		I2405025	Removed the prompt to update prices and discounts when configuring items from the work order module
		I2406111	Ensured that App Integration translator workbook is closed before attempting to open it for 2020 file import.
		I2404224	Config can now set the RequireSubWO flag on mastered BOM items.
		I2404214	Updated the configurator to ensure there are no NULL ItemIDs in ItemOps when updating mastered items with operations
		I2405238	Modified Auto processor.exe to auto run excel configurations without an interface, where an icon which only allows for Pause and Exit is placed in the system tray when running .
		I2405004	Updated the LAN configurator to use the new field called Tool Tip Text in the configurator setup to be displayed as the tool tip in the configurator. The property description is used when the tool tip text is blank
6.4.223	10/30/2024	I2410311	Corrected an issue that was causing excel filtered properties that have no triggering properties to no longer load the filtered data from the property worksheet when the user clicks the combo box to drop down.
			And ensured that the property disabling / enabling feature is the last feature that runs before the configurator form is loaded.
		I2410313	Corrected an issue that was causing excel filtered properties that have no triggering properties to no longer load the filtered data from the property worksheet when the user clicks the combo box to drop down.
			And ensured that the property disabling / enabling feature is the last feature that runs before the configurator form is loaded.
6.4.224	11/04/2024	I2410313	Updated the configurator to ensure that the type ahead feature of the combo box triggers the selection in the drop down list, before the combo box validation happens.

CRM.dll

6.4.148	10/28/2024	I2406226	Modified to allow using appBoxEventRaiser when viewing/editing prospects and customers.
		I1905079	Modified to be able to add custom menus, so that the new "Repacorp Pricing Breaks" functionality can be launched.
		I2406324	Show Inactive Contacts menu item replaced by more advanced filtering in the Contacts grid.

Database Setup Wave 0.xls

6.4.6	10/28/2024	I2404052	Restored the missing GL Account type data
		I2404251	Updated video links with new url

Database Setup Wave 0.xlsm

6.4.6	10/28/2024	I2404251	Updated video links with new url
		I2404052	Restored the missing GL Account type data

Database Setup Wave 1.xls

6.4.4	10/28/2024	I2404251	Updated video links with new url

Database Setup Wave 1.xlsm

6.4.5	10/28/2024	I2404251	Updated video links with new url

DataTransfer.exe

6.4.43	10/28/2024	I2404319	Modified to better handle serial tracked items in WorkOrderLotSerialInventory to prevent allowing overcompletions.
		I2404048	Modified to record any errors that occur in the ErrorLogs table.
		I2405232	Enhanced for automated testing.

DataTransfer.mdb

6.4.317	10/28/2024	I2312184	Added a new Search for the new version of the Make-Stock MRP form. Added a new placeholder view, sxMRPTemp, to be used in conjunction with the new Make-Stock MRP core search, as well as custom versions of the new Make-Stock MRP search.
		I2404048	Added an ErrorLogs table to sxSystem.
		I2404319	Modified to better handle serial tracked items in WorkOrderLotSerialInventory to prevent allowing overcompletions.
		I2404132	A ScaleWeight field has been added to Shipping.
		I2309169	Added a new field "IsWOGroupable" to the Items and ItemSpecs table to indicate when a subassembly can be sent to a child work order from the new Grouped Work Order Generator module. Also, added the search for the Grouped Work Order Generator module as well as its supporting view. In addition, added a new mapping table for this functionality called WorkOrderGroupConsolidationMapping
		I2405304	Converted the Transaction Detail By Account report to Telerik and added table functions to be able to query the data to obtain the SQL source of the transaction history report, the running totals are done in Telerik. Also added an index to GL Journal Entry to improve queries by Entry Date
		I2402226	User defined grid columns can now be setup in estimate, sales order, invoice, credit note, shipping, and work order.

6.4.317	10/28/2024	I2210202	Added Routes as a CalendarType
		I2404076	Update the Service Order search base query to link to the Service Order Details table when gathering Item information.
		I2404160	Added CategoryID to the Inventory Valuation By GL search.
		I2401097	Modified the core Invoice search base query to agree with its search details setup.
		I2407020	Made the following modifications to the Microvellum App Integration related data.

- Moved the AppIntegrationProductLineLinks.AppIntegrationRoutingGroupID data to the new ProducLine.AppIntegrationRoutingGroupID.
- Modified the AppIntegrationProductLineLinks to remove the AppIntegrationRoutingGroupID field.
- Added the ProductLineID to the AppIntegrationPhantomItems table.
- Removed the now redundant setup from the AppIntegrationPhantomItems table since now the phantom items are only against the product lines.
- Removed the AppIntegrationPhantomItems.AppIntegrationProductLineLinkID column since it has been deprecated.
- Modified the AppIntegrationPhantomItems_DF_IsGenericType constraint to replace the AppIntegrationProductLineLinkID by the ProductLineID>
- Modified the loading query to include the product line column.
- Modified the import queries to reference the ProductLineID field instead of the deprecated AppIntegrationProductLineLinkID when dealing with the AppIntegrationPhantomItems table.
- Moved into the AppIntegrationImportQueries table the queries that were assigning the phantom items in code.
- Added a new column "PropertyTypes" to the AppIntegration with its corresponding value.
- Added a new product line type to the ProductLineTypes table for Microvellum product lines.

6.4.317	10/28/2024	I2407011	Made the following modifications to the Cabinet Vision App Integration related data. - Moved the AppIntegrationProductLineLinks.AppIntegrationRoutingGroupID data to the new ProducLine.AppIntegrationRoutingGroupID. - Modified the AppIntegrationProductLineLinks to remove the AppIntegrationRoutingGroupID field. - Added the ProductLineID to the AppIntegrationPhantomItems table. - Removed the now redundant setup from the AppIntegrationPhantomItems table since now the phantom items are only against the product lines. - Removed the AppIntegrationPhantomItems.AppIntegrationProductLineLinkID column since it has been deprecated. - Modified the AppIntegrationPhantomItems_DF_IsGenericType constraint to replace the AppIntegrationProductLineLinkID by the ProductLineID> - Modified the loading query to include the product line column. - Modified the import queries to reference the ProductLineID field instead of the deprecated AppIntegrationProductLineLinkID when dealing with the AppIntegrationPhantomItems table. - Moved into the AppIntegrationImportQueries table the queries that were assigning the phantom items in code. - Added a new column "PropertyTypes" to the AppIntegration with its corresponding value. - Added a new product line type to the ProductLineTypes table for Cabinet Vision product lines.
		I2309034	Added new AutomationLog functionality for EventAlerts and AutomatedReports.
		I2405326	Increased the size of the TaxAuthorityDesc field in SalesTaxGroup, PurchaseTaxGroup and TaxAuthority to handle cases where Online tax can return for certain regions (mainly Colorado) where the tax description for an authority can exceed 50 characters
		I2003118	Two new views for GLAccount Setup information as well as one for categories showing information such as number of items (tracked and non) plus active item counts for buy, sell and make.
		I2406215	Created two new table functions, one is ufn_sxHistoricalInventory where you supply a date and the second parameter indicates transaction date vs Audit (null or 0) is transaction date and 1 = the date the user processed the transaction. It will return the historical on hand at that date plus the current GL account it would use based on category and location and pays attention to WIP. Also, this shows the historical ownership of the inventory record as well as what rack/bin/container and all lot/serial and vendor lot data it had. The second is ufn_sxInventoryOnHand which is the same as ufn_sxHistoricalInventory but works purely on the on hand inventory as it is now in the database. Finally added two new indexes InventoryItemsAuditTrail_IX_CreatorID and InventoryItemsAuditTrail_IX_InventoryItemID and removed the existing InventoryItemsAuditTrail_IX_CreatorID_InventoryItemID index
6.4.318	10/30/2024	I2407020	Corrected an error when applying the DataTransfer on an ActiveM database having data in the AppIntegrationAssemblies table.

6.4.319	11/01/2024	I2411018	Added a new setup record to the DataTransfer table of the DataTransfer.mdb database for the AppIntegrationData table to be able to restore its data when the parent data in the AppIntegration table is removed and restored during the data transfer process.

DataTransferBuilder.exe

6.4.31	10/28/2024	I2404319	Modified to better handle serial tracked items in WorkOrderLotSerialInventory to prevent allowing overcompletions.

DayEndProc.dll

6.4.168	10/28/2024	I2407074	Corrected issue using PST post option to post to the variance account using misc vendor invoice lines.
		I2406020	Modified to correct an issue with the AR batch file creation for the Premier (API) MYOB AccountRight where the header of the file was missing the "-Discount Days", but the corresponding detail value was present, which in turn was causing a misalignment of the columns values after the "Terms - Payment is Due" column.

DC2001.dll

6.4.67	10/28/2024	I2405176	When saving a DataCollection document, each line is examined more carefully to determine whether or not its Complete flag for a related operation should be automatically set, based on whether or not all of its related splits have been completed.

EventAlert.dll

6.4.37	10/28/2024	I2309034	Added new AutomationLog functionality for EventAlerts.

EventAlert.exe

6.4.23	10/28/2024	I2309034	Added new AutomationLog functionality for EventAlerts.

ExcelBOMImport.dll

6.4.15	10/28/2024	I2406287	Added support for Scrap field when importing BOMs.
		I2406288	When importing Routing sheet, exact case matching of time UOMs is no longer required.
		I2405063	Modified ExcelBomImport tool to allow an update to an item's ItemVendor setup, adding a second or subsequent vendor if the imported primary vendor is different from the existing primary vendor.

ExcelItemImport.xlsx

6.4.3	10/28/2024	I2406287	Added support for Scrap field when importing BOMs.

History.dll
6.4.51   10/28/2024   I2309034   Modified to support a more generic method of launching a search from the main window.

ImportData.exe
6.4.5   10/28/2024   I2409114   Modified to handle the invalid data for column error and to test the linked tables by default.

InventoryAdjustment.dll
6.4.111   10/28/2024   I2312203   Ensure users cannot delete lines if viewing on the screen while unapproved yet another user approves it while it is being viewed in the unapproved state.

InventoryTransfer.dll
6.4.130   10/28/2024   I2405059   Added support to Excel mass transfer import for user-defined fields.

Invoice.dll
6.4.196   10/28/2024   I2407118   Improved the logic to gather costs for Invoice details after inventory is updated to group only by the detail ID and round once gathered to the nearest penny.

ItemEditor.dll
6.4.167   10/28/2024   I2407132   Added validation to prevent saving a copy of an item with the new ItemNo containing an apostrophe.

I2407020   Modified to add a new item classification named "Phantom Item" to the Item Editor main screen to be able to mark subassembly items as such.

I2309169   Modified to add a new option to the list of item types in the Main Item Editor screen: "WO Group" to be able to mark the routing group items that will become the line of the child work orders when using the Grouped Work Order Generator functionality. Also, added a new item property "WO Groupable" to the main Item Editor screen, that will allow marking the BOM subassemblies as eligible to be sent to child work orders when using the Grouped Work Order Generator functionality.

I2402030   Modified to add a validation to the ItemEditor to ensure that when deleting an operation from the BOM, the system checks if that operation has already data collection against it.
A choice is then given to the user to disassociate the data collection from the work order line, but if the user declines to orphan the data collection, the operation deletion is aborted.

JobCosting.dll

6.4.113	10/28/2024	I2403286	Prevented the generation of estimate details in Job Costing > Tools > Generate Estimate for which the Job Costing estimate already exists.
		I2404326	Ensured bid list generates the documents bypassing the Vb6 objects.
		I2202194	Prevent users from deleting accepted quotes from the bid list within Job Costing.
		I2406354	Added support for Opportunity workflows.

MatReq.dll

6.4.157	10/28/2024	I2407025	Ensure that pending RFQ's appear against their related open MatReq records in the MatReq form.
		I2404284	In forecasted MRP, demand that exists between the end of the forecast and six months out now appears in the After column.
		I2404326	Moved all launching of document logic to use the new method to ensure modules are loaded the same way as in .net modules such as search

MobileTransferProxy.exe

| 6.4.1 | 10/28/2024 | I2405327 | Altered the receiving generation to work with Mobile transfer proxy which has been updated to bypass Receiving.dll |

Newtonsoft.Json.dll

| 6.4.2 | 10/29/2024 | I2410264 | Update to Newtonsoft 13.0.3. |

POInvoice.dll

6.4.137	10/28/2024	I2406250	Adjusted the validation for fiscal being locked when you back date from today to improve the check to make sure the year end is not closed which can only occur if the fiscal calendar is opened in the database.
		I2405293	Safety code was added to round line ExtendedPrice values prior to the document subtotal recalculation, and in this way ensure that they will be in agreement.
		I2405265	Vendor Invoicing will now delete zero-quantity lines on approval; prevent approval if the related deposit is not approved; and provide a more user-friendly response when a REFERENCE constraint is invoked.

PurchaseOrder.dll

| 6.4.148 | 10/28/2024 | I2404079 | The connection can now be reset when returning from intercompany processes. |

QualityAssurance.dll

| 6.4.16 | 10/28/2024 | I2406353 | Improved performance of saving existing QA documents if there are a large number of existing QA documents in the system already. |

RptFinancials.dll

6.4.73	10/28/2024	I2009214	Improved performance running Trial Balance, and the balance sheet income statement for those with a lot of GL entries

Sales by Customer (Margin Summary).trdp

6.4.1	10/28/2024	I2406015	Adjusted the Margin column to show a percentage rather than an absolute amount. Adjusted the columns' widths to accommodate slightly larger values for the grand totals.

SalesOrder.dll

6.4.252	08/20/2024	I2408044	Improved handling of excluding make stock sales order lines when updating a work order.
6.4.253	10/28/2024	I2309169	Modified to add validations when deleting lines or the entire sales order to detect if the related work orders have child work orders.
		I2405135	MatReq will no longer permit a line to "inherit" a previous line's unit cost if generated at a zero cost that can't be otherwise overridden.
		I2403195	Added a check to validate the existence of a fiscal calendar before proceeding to process the Sales Order > Drop Shipment tool.

Seradex OrderStream Installer.exe

6.4.4	10/28/2024	I2401198	Now will optionally add shortcuts to the desktop and set folder permissions on the sxRuntime and Templates folders.

Seradex.Accounting.QuickBooksLink.dll

6.4.3	10/28/2024	I2406308	Updated references to Newtonsoft.Json.

Seradex.Aspose.dll

6.4.13	07/26/2024	I2407252	When importing a worksheet into a workbook and Initial Data Import functionality is being used, ensure that the Source Workbook Directory folder path has any environment variables expanded to the correct network path.
6.4.14	10/28/2024	I2406032	Added a new method variant for extracting data from Excel, to specify columns and data types.

Seradex.BaseSystem.dll

6.4.68	10/28/2024	I2312184	Add new extension methods.
		I1905079	Modified to add new functionality for internal use.
		I2404326	Enhanced internal product functionality.
		I2309034	Enhanced internal product functionality.

Seradex.ComComponents.dll

| 6.4.61 | 10/28/2024 | I2404326 | Added new methods to launch document storage for a detail line. |
| | | I2405246 | Added a constructor that includes "APIMode" as an option to ComComponents to ensure the Common Components doesn't destroy DLLs handled by the API. |

Seradex.Common.EDISystem.dll

| 6.4.23 | 10/28/2024 | I2405292 | Add the system error message and number to the OrderStream error message when the EDI Resolver/Identifier workbook can't be found or accessed when using the Automated Import. |

Seradex.CommonServices.dll

6.4.90	10/28/2024	I2309169	Modified to add the new item property "IsWOGroupable" to the procedure that returns the BOM information for an item.
		I2405246	Adjusted tax calculation to no longer rely on the sxTaxes.dll
		I2404326	Added new logic to copy detail UDF to replace the existing logic which used Com dlls. As well as changed the launching logic for Estimate/Invoice and Credit note used in places such as search to bypass the Old Estimate.dll and added the ability to Launch RFQ which is used by MRP.
		I2404160	Added support for opening Category Maintenance from Search.
		I2406156	Updated the sxCreateObject method that ModuleLauncher.LaunchModule uses to use the new overload one that also takes the AppboxEventRaiser parameter.
		I2312184	Minor enhancements to module activation checks, registry settings gathering, OwnerTypes gathering, Stat Codes gathering and other various checks.
		I2406308	Updated references to Newtonsoft.Json.
		I2406310	Added NonConformance document type to the Module Launcher.

Seradex.Connection.dll

6.4.57	10/28/2024	I2312184	Added UserDefined SQL string building method.
		I2406156	Created a new sxCreateObject overload method that takes both the sxCreateObject_Args and appBoxEventRaiser Object as parameters.
		I2406134	Returned proper error message if the MasterConnectionInfo.OverrideActiveMConnection is Nothing (When Seradex isn't installed)
		I1905079	Modified to add new functionality for internal use.

Seradex.Dbox.Export.dll

| 6.4.12 | 10/28/2024 | I2311202 | Added support to read unposted Payroll transactions from Dbox and to mark them as posted. |

Seradex.Dbox.QuickBooks.dll

| 6.4.9 | 10/28/2024 | I2311202 | Added support to read unposted Payroll transactions from Dbox and to mark them as posted. |

Seradex.Dbox.Synchronization.dll

| 6.4.4 | 10/28/2024 | I2311202 | Added support to read unposted Payroll transactions from Dbox and to mark them as posted. |

Seradex.EstimateSystem.dll

6.4.41	10/28/2024	I2404347	Corrected issue deleting estimate lines when there is at least one non sell item on that document.
		I2405246	Adjusted tax calculation to no longer rely on the sxTaxes.dll
		I2402226	Support for user defined grid columns has been added.
		I2404326	Bypassed Estimate.dll in favour of .net functions and moved logic responsible for post generation logic when creating sales orders to the sales order object.
		I2402222	Added support to perform custom actions when an order is generated from a quote.
6.4.42	10/30/2024	I2410299	Corrected an issue for databases without Module Userdefineds activated.

Seradex.Excel.dll

| 6.4.36 | 10/28/2024 | I1905079 | Modified to add a validation in the section that runs the RuntimeDataImport logic to avoid an error when a SQL stored procedure parameter type is not explicitly specified. |
| | | I2406032 | Added a new method variant for extracting data from Excel, to specify columns and data types. |

Seradex.Financials.FinancialsSystem.dll

6.4.137	10/28/2024	I2407111	The validate fiscal period closing is now unified with the same validation on year end. Also added warnings in the event of no failures to warn users about transactions not approved and shipments either not invoiced or are invoiced by the invoice is not approved yet. Added to the failure list transactions that are approved but no inventory updated on top of the existing transactions not posted to the GL
		I2404326	Added logic to handle generation of a sales order from a quote that had payment applied via authorize.net in dbox.
		I2404258	In cases where the line tax group setup matches that of the sales order header, and deposits are taxable, ignore the line's tax group setup for the purposes of grouping (and therefore potentially splitting) the deposit item.

Seradex.Financials.TransactionPosting.dll

| 6.4.10 | 10/28/2024 | I2406250 | Adjusted the validation for fiscal being locked when you back date from today to improve the check to make sure the year end is not closed which can only occur if the fiscal calendar is opened in the database. |

6.4.10	10/28/2024	I2406247	Corrected issue if a receipt fails for any reason to auto post, and the user does not close receiving and instead does another receipt approval in the same screen, that second receipt will also not auto post because it believed it failed due to the prior receipt. Does not impact ERP anywhere.

Seradex.Infragistics.dll

6.4.72	10/28/2024	I2309034	Enhanced internal product functionality.

Seradex.Inventory.dll

6.4.52	09/25/2024	I2407029	Added logic to ensure ERP anywhere can handle Sales order ownership transfers.
6.4.53	10/28/2024	I2406270	Corrected issue when creating a receipt for more than one serial tracked item and never once going into the lot serial form then just approve, it would assign the same serial to the new details in that case.
		I2405317	Added required logic to work with the new Receiving lot serial form.
		I2312184	Added methods used for MRP table creation.
		I2407118	Improved the logic to gather costs for Shipping details after inventory is updated to group only by the detail ID and round once gathered to the nearest penny.
		I2405006	Improve the robustness of the Lot-Serial system to ensure that errors that occur during database record creation do not affect subsequent uses.

Seradex.Inventory.Transfer.dll

6.4.10	09/25/2024	I2407029	Added logic to ensure ERP anywhere can handle Sales order ownership transfers. Also ensure for ERP anywhere if detail destination to ownership is used and is different from the default header ownership that it uses the detail.

Seradex.InvoiceSystem.dll

6.4.43	08/23/2024	I2406274	Corrected an issue that was causing invoice lines totals including freight and handling item totals not to roll up properly in the invoice header table. Invoice Additional Items functionality will now be run with respect to whether you have the Option set to add them Automatically on Save or Prompt when generating an Invoice.
6.4.44	10/28/2024	I2402226	Support for user defined grid columns has been added.

Seradex.Library.dll

6.4.36	09/25/2024	I2407029	Added logic to ensure ERP anywhere can handle Sales order ownership transfers.
6.4.37	10/28/2024	I2405317	Added required logic to work with the new Receiving lot serial form.

Seradex.OrderEntry.Bases.dll

6.4.31	10/28/2024	I2402226	Modify string data type property handling in the generic Order Entry detail object.

Seradex.OrderEntry.dll

6.4.24	10/28/2024	I2406359	The instruction to load the MailMerge class now includes the fully qualified class name (including Namespace) to allow the LaunchMailMergeReport method to be executed.

Seradex.OrderEntryLibrary.dll

6.4.45	10/28/2024	I2402222	Added support to perform custom actions when an order is generated from a quote.
		I2406046	Modified to load Dbox configurator from Order Stream using the ItemID from the ItemSpec instead of directly from the transaction detail which could be NULL
		I2404326	Moved all the logic related to assigning and removing Jobs from Transactions as well as all the synchroniztion logic required by Estimate.
		I2404341	Adjusted the default line due date logic to be its own function and if a make item bom has no buy items or no bom items use the make items assembly lead time instead.
		I2405246	Adjusted tax calculation to no longer rely on the sxTaxes.dll
		I2306229	Corrected display issue that resolves itself on save if you manually change a lines detail tax via the pop up detail tax form.
		I2202194	Altered the delete validation on Estimate pertaining to related Jobs to also prevent deleting a quote that happens to be an accepted quote on a bid list.

Seradex.Production.Calendar.dll

6.4.20	10/28/2024	I2210202	Added Routes as a CalendarType

Seradex.Production.DataCollection.dll

6.4.78	10/28/2024	I2206210	Added validation on complete to check the existing data collection record and abort in the following cases, the data collection line is deleted, someone edited it to set a finish time, it was marked completed, the work order line itself is now complete.
		I2209057	Corrected issue using Proration and you have a large enough number of lines and start and stop/complete them all in a very short time span, enough to have some prorate less than a fraction of a second.
		I2404319	Modified to better handle serial tracked items in WorkOrderLotSerialInventory to prevent allowing overcompletions.
		I2405325	Shop Floor Execution Start > Stop operations for greater than the full quantity will no longer set the Complete flags. Only a Start > Complete operation will do that.
		I2309169	Modified to ensure that the container tracking logic is disabled when having the license for the grouped work order generator enabled. This is to avoid interfering with the logic that processes grouped related work order lines, which uses its own container functionality.
		I2309034	Updated for compatibility with the latest changes to Search.

Seradex.Production.PunchClock.dll

6.4.21	10/28/2024	I2309034	Updated for compatibility with the latest changes to Search.

Seradex.Production.Rework.dll

6.4.23	10/28/2024	I2309034	Updated for compatibility with the latest changes to Search and WorkOrder.
6.4.24	11/04/2024	I2410335	Modified the call to launch the Rework Sub-WO form to prevent throwing an exception.

Seradex.Production.Scheduling.dll

6.4.94	10/28/2024	I2403208	Modified to add options for pulling operations when moving.

Seradex.Production.WorkFlowSystem.dll

6.4.12	10/28/2024	I2406354	Added support for Opportunity workflows.

Seradex.Production.WorkOrder.dll

6.4.54	10/28/2024	I2312184	Added new work order generation system that will utilizes the core work order system.
		I2404101	Added a new back-end Work Order Generation system intended for use by the Web and Mobile applications.
		I2309169	Modified to include the changes necessary to support the new Grouped WorkOrder Generator module
		I2402238	Approving a work order will now leave a trail in the DeletionLog.
		I2404196	Removed the restriction for deleting work order lines where the work order is tied to a Job
		I2402226	Support for user defined grid columns has been added.
		I2401248	Lot or Serial-tracked items will be colour-coded accordingly upon being added to a work order, as opposed to when the form is saved and reloaded.
		I2309034	Enhanced internal product functionality.

Seradex.Purchasing.dll

6.4.49	10/28/2024	I2402226	Copying a purchase order now copies the grid user defined values as well.
		I2404079	The purchasing system now resets the connection when returning from intercompany management.

Seradex.Purchasing.MatReq.dll

6.4.5	10/28/2024	I2404342	When Multi-Facility is active and using the Make-Stock MRP, if Include No Demand is ON, items that already have demand in one facility will now have additional records for facilities with no demand gathered in the result set.
		I2312184	Added a new back-end MRP system. Consolidated the Make-Stock MRP gathering into the Purchasing MRP system.

Seradex.Purchasing.ReceivingSystem.dll

6.4.51	10/28/2024	I2407190	Restored custom logic for ASN receiving to be performed prior to approval
		I2407028	Ensure when receipts are created using the temp table method and are told to approve, ensure it updates inventory as well.
		I2405101	If using the Location based GL preference and the location on the receipt happens to have a GL, ensure receiving uses that GL, even if the location on the po is the same. This is only for tracked items and if using financials the GL on the location has to be tagged as a material GL account.
		I2405327	Altered the receiving generation to work with Mobile transfer proxy which has been updated to bypass Receiving.dll
		I2405317	Updated the logic to sync lot serial on approval to work with the fact it now is a function and removed no locks from the receiving detail load SQL
		I2406064	Ensure ASN Receipts allocate the received inventory to the receipt itself.

Seradex.ReportSystem.dll

6.4.28	07/16/2024	I2407145	Corrected issue whereby custom cheques would not print as expected but use the Telrik core one instead.
6.4.29	07/23/2024	I2407240	Rebuilt to address report compatibility.

Seradex.RFIDDevice.dll

6.4.2	10/28/2024	I2406308	Updated references to Newtonsoft.Json.

Seradex.SalesOrderSystem.dll

6.4.51	10/28/2024	I2402222	Added support to perform custom actions when an order is generated from a quote.
		I2402226	Support for user defined grid columns has been added.
		I2404175	Ensure if a sales order is saved it is not resetting the credit hold /credit hold override state that it was when the order was loaded. And ensure if the auto gen matreq or auto gen WO upon SO approval preference is enabled, approval is allowed still if the order is on hold yet cancelled.
		I2402306	Altered shipment generation from Sales order to use the same logic as ERP anywhere and Generation of Shipment within Shipping for a sales order.
		I2404326	Moved all logic related to post sales order generation from a quote in either regular or advanced batch processing to sales order in one unified set of logic.
		I2210202	Added a new UI to set Ship Dates based on the next available Route date in the Calendar
		I2404097	The previously modified list of details will be reset prior to save.
		I2405246	Adjusted tax calculation to no longer rely on the sxTaxes.dll
6.4.52	11/01/2024	I2410338	Generating a sales order from an estimate without a specified Customer Ship To will now complete successfully without any issues.

Seradex.Search.dll

6.4.95	10/28/2024	I2404326	Ensured logic to allow a quote to be generated directly from a search bypasses Estimate.dll and uses the ,net version
		I2404160	Added support for opening Category Maintenance from Search.
		I1905079	Modified to allow creating Header and Detail Search based data entry modules.
		I2309034	Enhanced to enable righthand linked searches to display using the entire window height when a bottom linked search is also included. This also allows grandchild linked searches to be displayed at the bottom of the righthand search.

Seradex.Shipping.dll

6.4.37	10/28/2024	I2405294	Ensured if a shipment has inventory updated separate from Approval that the event that fires off for shipping inventory update fires off.
		I2402306	Added logic to shipment generation for a sales order to ensure modules outside shipping such as ERP anywhere and sales order cannot generate shipments without details in cases such as all drop shipment lines, or all non shippable. Also added logic to prevent a user from generating as shipment for a sales order if another user has a unsaved new shipment for that same order.
		I2402226	Support for user defined grid columns has been added.
		I2404132	The weight field in the header freight tab has been renamed to estimated weight, and a new scale weight field has been made available.

Seradex.SpecBuilder.dll

6.4.12	10/28/2024	I2309169	Modified to include the new item property "IsWOGroupable" in the spec generation process.

Seradex.Strings.dll

6.4.56	10/28/2024	I2312184	Added enums for SOStatus, modified MRPMode enum, and added new modules.

Seradex.UserDefined.dll

6.4.23	10/28/2024	I2402226	Grid user defined property defaults now apply.
		I2401258	Query controlled filters have been enabled for multi-select user defined properties.
6.4.24	11/04/2024	I2411032	The code to populate query-driven combo UDF properties will no longer be bypassed if there are no filters set up.

Seradex.Utilities.IntegrationMgrSystem.dll

6.4.42	10/28/2024	I2407011	Modified to incorporate some enhancements to simplify the Cabinet Vision import setup process.
		I2407020	Modified to incorporate some enhancements to simplify the Microvellum import setup process.

6.4.42	10/28/2024	I2406032	Added the ability to extract data from Excel by specifying columns and data types. Remove columns with no values from the extracted data.
		I2405246	Adjusted tax calculation to no longer rely on the sxTaxes.dll
		I2403178	Modified to add the ability to detect and prompt the user to enter the missing product links and their phantom items setup for the Cabinet Vision import process.
		I2404326	Removed the need to set and use the estimate vb6.dll

Seradex.Utilities.NonConformanceManagerSystem.d

| 6.4.32 | 10/28/2024 | I2405317 | Changed how vendor returns are generated to by pass the use of the Receiving.dll |
| 6.4.33 | 10/29/2024 | I2406310 | Corrected the query to populate the Document combo. |

Seradex.Utilities.UserDefinedPropMaintSystem.dll

| 6.4.15 | 10/28/2024 | I2401258 | Query controlled filters have been enabled for multi-select user defined properties. |

Seradex.Win.BatchProcessor.dll

| 6.4.29 | 10/28/2024 | I2205319 | For Sales order generation if you are using Job Billing you can only create a new Sales order or append to another order for the Same Job. If the quote has no Job you can only create new or append to another order that has no Job. The existing rules about the same customer and customer account set if using Multi divisional remains. |
| | | I2404326 | Adjusted to bypass the Estimate.dll to all post Sales order generation logic. |

Seradex.Win.ConcurrentItemLookup.dll

| 6.4.12 | 10/28/2024 | I2309034 | Updated for compatibility with the latest changes to Search. |

Seradex.Win.Controls.dll

6.4.49	10/28/2024	I2404079	The document storage control will no longer be affected by inter-company processes.
		I2408223	Added a handler for clearing the PO ShipFrom Name control.
		I2310017	Date and time completed are no longer editable on completed work flow records. Removing the completed flag on a work flow record will no longer clear the date and time completed. Completing a line no longer overwrites the existing date and time completed.
		I2404240	Modified the ShipTo address lookup control logic, to mark a parent form to have been changed only if the value selected has been changed.
		I2309169	Modified to add the ability to raise a double-click event on a message grid cell that can be handled from the module displaying the message. For example, this will allow launching the associated to the cell transaction.
		I2404326	Modified to ensure that new lines in the Comments grid do not default to a specific comment type.

6.4.49	10/28/2024	I2406253	Modified the Activation behaviour of the Grid MessageBox form to allow cell contents to be selectable on double-click.
		I2406267	Changed the default button for the workflow task insertion dialogue from OK to Cancel.
		I2407170	Unchecking a Completed flag in an otherwise fully completed workflow will set the header Completed flag from True to False on Save event.

Seradex.Win.Estimate.dll

6.4.63	07/17/2024	I2407163	The Estimate line UDF column will now be shown if appropriate.
6.4.64	10/28/2024	I2402222	Added support to perform custom actions when an order is generated from a quote.
		I2408043	To prevent detail row mismatches after line deletion, a selected row's ListObject will be used to arrive at the index to be processed when modifying a row using the right-click Bill Of Materials tool.
		I2312202	Ensure errors from batch processing and non batch sales order generation are displayed appropriately..
		I2403137	Minor UI adjustments to the launching method messages and error output.
		I2402226	User defined grid columns can now be setup for the estimate form.
		I2404326	Bypassed Estimate.dll for form level functions and deprecated the old estimate costing form. Modified to support Estimate generation from Outlook functionality.

Seradex.Win.Financials.dll

6.4.138	10/28/2024	I2403235	The customer statement report will no longer display a message about the customer balance table when the report is processed with exclude zero balance and no activity selected.
		I2403155	Added logic to bank deposit form to prevent errors some users experience whereby the grid displays a red x.
		I2407111	The validate fiscal period closing is now unified with the same validation on year end.
			Also added warnings in the event of no failures to warn users about transactions not approved and shipments either not invoiced or are invoiced by the invoice is not approved yet.
			Added to the failure list transactions that are approved but no inventory updated on top of the existing transactions not posted to the GL
		I2309034	Updated for compatibility with the latest changes to Search.

Seradex.Win.IntegrationManager.dll

6.4.29	10/28/2024	I2406327	When using the Solidworks(Excel) import and selecting a file from the Source Data file dialog, ensure that both Excel and CSV files will be visible by default.
		I2406032	The column headers in the Excel data view for SolidWorks imports will now be resized.
		I2407011	Modified to incorporate some enhancements to simplify the Cabinet Vision import setup process.
		I2407112	Updated text and added a note to clarify the purpose of the Item Exists dialog.

| 6.4.29 | 10/28/2024 | I2407020 | Modified to incorporate some enhancements to simplify the Microvellum import setup process. |
| | | I2403178 | Modified to add the ability to detect and prompt the user to enter the missing product links and their phantom items setup for the Cabinet Vision import process. |

Seradex.Win.IntercompanyManagement.dll

6.4.11	10/28/2024	I2405136	The Intercompany Management form will now allow the editable Unit Price value to take on the number of digits set up for the PO module.
		I2405133	Source SO line Reference field will now be transferred to destination SO line.
		I2404079	Intercompany management can now be launched from PO for buy and stock items.

Seradex.Win.InventoryAdditionalInfo.dll

| 6.4.11 | 10/28/2024 | I2309034 | Updated for compatibility with the latest changes to Search. |

Seradex.Win.InventoryTransfer.dll

| 6.4.40 | 10/28/2024 | I2406064 | Adjusted how Receiving calls the ASN Transfer function. |

Seradex.Win.Invoice.dll

6.4.66	08/23/2024	I2406274	Corrected an issue that was causing invoice lines totals including freight and handling item totals not to roll up properly in the invoice header table.
6.4.67	10/28/2024	I2309034	Updated for compatibility with the latest changes to Search.
		I2403137	Adjusted the launching behaviour to now allow direct launching from the Profile Bar. Also added security to ensure the user's profile has access to the module.
		I2402226	User defined grid columns can now be setup for the invoice form,
6.4.68	10/30/2024	I2410299	Corrected an issue for databases without Module Userdefineds activated.

Seradex.Win.ItemEditor.dll

| 6.4.7 | 11/04/2024 | I2411032 | Rebuilt from code and re-released. |

Seradex.Win.MaintenanceTools.dll

6.4.23	10/28/2024	I2404300	Added an additional value to the WebUpdateStatus enum to support errors during Web Update identified by the API
		I2406308	Updated references to Newtonsoft.Json.
6.4.24	11/01/2024	I2410342	Modified to allow Web Update to use the older version of the Newtonsoft.Json.dll if the currently required version has not yet been downloaded.

Seradex.Win.MatReq.dll

6.4.5	10/28/2024	I2312184	Added a new version of the Make-Stock MRP form.
		I2309034	Updated for compatibility with the latest changes to Search.
		I2303236	In the new Make-Stock MRP form, the Qty to Make column will now be editable after entering the cell via keyboard click(tab, enter, arrow keys).

Seradex.Win.NonConformanceManager.dll

| 6.4.33 | 10/28/2024 | I2406310 | Enabled NonConformance documents to be launched from Search. |
| | | I2405317 | If the source is PO and you have more than one item make sure when you return to vendor we attempt to default the PO to the one for the source receipt of the inventory record. |

Seradex.Win.OrderEntryFormLibrary.dll

| 6.4.12 | 10/28/2024 | I2407265 | Modified the way the Web Configurator form would launch so that multiple users on the same machine were able to launch it at the same time by setting the WebViewer's User Data Folder prior to setting the Source URL. |
| | | I2404326 | Added logic to call Configurator to also prompt for the configuration type as well as Launch Document storage. |

Seradex.Win.Purchasing.dll

6.4.85	10/28/2024	I2403137	Adjusted the launching behaviour to now allow direct launching from the Profile Bar. Also added security to ensure the user's profile has access to the module.
		I2404079	An intercompany management menu item has been added to the purchasing form.
		I2402226	Copying a grid row now copies the grid user defined values as well.
		I2406319	The PO line will now correctly be identified as having been changed when a non-UDF control UserDefined property in the grid is changed, which will in turn enable the Save button.
		I2408223	Modified the VendorShipFromAddress control, to be correctly initialized and loaded with the correct vendor information.

Seradex.Win.Receiving.dll

6.4.69	10/28/2024	I2408033	The Receiving form will bypass reloading workflow data on form Undo if the Workflow control is not enabled.
		I2405317	Replaced the receiving lot serial form with a whole new version that performs the same logic as before just has a more consistent look and feel to the other forms.
		I2405327	Altered the receiving generation to work with Mobile transfer proxy which has been updated to bypass Receiving.dll
		I2406294	Added a message when attempting to process an approved receipt as to why you cannot and corrected the menu caption of the help in receiving.
		I2406066	Adjusted Receiving form logic to not directly call Vb6 objects for tasks not directly related to the Receiving.dll
		I2406068	Moved the LotSerialType class from being embedded in the Receiving form to its own class in Seradex.Win.Receiving.
		I2406033	RMA receipts will now go through data entry validation on save.

| 6.4.69 | 10/28/2024 | I2404326 | Changed the call to LaunchConfigurator to use the subroutine version rather than the function version. |

Seradex.Win.Reports.dll

| 6.4.32 | 10/28/2024 | I2309034 | Modified to add new AutomationLog functionality for EventAlerts and AutomatedReports. |

Seradex.Win.SalesOrder.dll

6.4.70	10/28/2024	I2408043	To prevent detail row mismatches after line deletion, a selected row's ListObject will be used to arrive at the index to be processed when modifying a row using the right-click Bill Of Materials tool.
		I2406348	SalesOrder header ShipVia and Contact will not be replaced with nothing when loading a ShipTo with empty default values set for these fields.
		I2405056	The Tools > Recalculate Prices control will be disabled with a meaningful tooltip when the loaded sales order is approved or has a SOStatus greater than Shipped.
		I2403137	Adjusted the launching behaviour to now allow direct launching from the Profile Bar. Also added security to ensure the user's profile has access to the module.
		I2404326	Updated form level document launching logic for work order, invoice credit note and Estimate to use the same function search uses to load modules.
		I2210202	Added a new UI to set Ship Dates based on the next available Route date in the Calendar
		I2402226	User defined grid columns can now be setup for the sales order form.
		I2402306	Altered shipment generation from Sales order to use the same logic as ERP anywhere and Generation of Shipment within Shipping for a sales order.

Seradex.Win.Scheduling.dll

| 6.4.56 | 10/28/2024 | I2403208 | Updated for compatibility with changes to Seradex.Production.Scheduling.dll |
| | | I2309034 | Updated for compatibility with the latest changes to Search. |

Seradex.Win.Scheduling.Finite.dll

| 6.4.41 | 10/28/2024 | I2309034 | Updated for compatibility with the latest changes to Search. |
| | | I2403208 | Modified to add options for pulling operations when moving. |

Seradex.Win.Search.dll

| 6.4.109 | 10/28/2024 | I2309034 | Enhanced to enable righthand linked searches to display using the entire window height when a bottom linked search is also included. This also allows grandchild linked searches to be displayed at the bottom of the righthand search. |

6.4.109	10/28/2024	I1905079	Modified to allow creating Header and Detail Search based data entry modules. Also, included the ability of specifying custom module searches based only on the module search setup without having to specify a launch source. The filter grid was improved as well to be able to specify different filtering criteria.
		I2312184	Enhance method by which the SQL override query is set.
		I2403194	Improve the sizing and resizing of the Telerik Report Search control.
		I2404326	Ensured logic to allow a quote to be generated directly from a search bypasses Estimate.dll and uses the ,net version
		I2404012	Updated to use the same advanced security logic as the main Transaction forms such as Receiving and Sales Order. As well as ensure the container list loads using the same logic as transfer generator would load the containers for container management.
		I2210202	Modified Search to be able to add controls to the search toolbar when used outside of the generic search screens.

Seradex.Win.ServiceOrder.dll

| 6.4.24 | 07/24/2024 | I2407246 | Granted an exception to the Service Order Details grid UDF, so it will now never be hidden. |
| 6.4.25 | 10/28/2024 | I2403137 | Adjusted the launching behaviour to now allow direct launching from the Profile Bar. Also added security to ensure the user's profile has access to the module. |

Seradex.Win.Shipping.dll

6.4.56	10/28/2024	I2405115	Users will not be permitted to save a shipment with an empty Shipment Date control.
		I2403137	Adjusted the launching behaviour to now allow direct launching from the Profile Bar. Also added security to ensure the user's profile has access to the module.
		I2404132	The weight field in the header freight tab has been renamed to estimated weight, and a new scale weight field has been made available.
		I2405036	Adjusted print on approval to use the same logic as Receiving and adjusted the loading of Sales order and invoice from shipping to be consistent with loading from search. Adjusted how the tracked asset is called from shipping approval.
		I2402226	User defined grid columns can now be setup for the shipping form.
		I2402306	The default employee is now determined in the back end logic as opposed to the shipping form.
		I2405060	Corrected the Shipping form loading to accommodate type-ahead or scans to the SalesOrderNo combo. Added logic to inject the unapproved shipment to the ShippingNo combo, rather than load all shipments.

Seradex.Win.ShopFloorExecution.dll

| 6.4.70 | 10/28/2024 | I2404012 | Updated to use the same advanced security logic as the main Transaction forms such as Receiving and Sales Order. |
| | | I2309034 | Updated for compatibility with the latest changes to Search. |

Seradex.Win.UserDefinedPropertyMaintenance.dll

6.4.30	10/28/2024	I2401258	Query controlled filters have been enabled for multi-select user defined properties.

Seradex.Win.WorkOrder.dll

6.4.58	10/28/2024	I2402238	Approving a work order will now leave a trail in the DeletionLog.
		I2402226	User defined grid columns can now be setup for the work order form.
		I2401248	Lot or Serial-tracked items will be colour-coded accordingly upon being added to a work order, as opposed to when the form is saved and reloaded.
		I2404220	Clicks of the MatReq Details [...] button in the Work Order form will no longer result in a thrown exception if no work order is loaded.
		I2403137	Adjusted the launching behaviour to now allow direct launching from the Profile Bar. Also added security to ensure the user's profile has access to the module.
		I2309169	Modified to add the new Grouped WorkOrder Generator module.
		I2312184	Add the ability to the Work Order form to launch the new Make-Stock MRP form based on the existing MRP Search.
		I2408121	Connection object's RuntimeEngine property will only be updated if the RuntimeEngine to which it is to be set is not nothing.

ServiceOrder.dll
