

Seradex OrderStream

Technical Release Notes

October 2017

ActiveM20.dll

6.4.111	11/03/2017	11705068	Added the ability to filter the Item Running Balance by facility.
		11709135	The item running balance report has been updated to improve result accuracy.

ActivityLog.ocx

6.4.21	11/03/2017	11705289	Updated ActivityLog control to have .NET OrderEntry compatibility
--------	------------	----------	---

AutoConfig.dll

6.4.96	11/03/2017	11710073	Compilation parameters added to grant more granular customization abilities to Comments sections throughout Order Stream.
		11701221	Altered Auto config to support detail commissions in a reconfigure.
		11710082	Redirected system to use a more up-to-date RoundUp function.
		11710118	Prevent the auto processor from clearing the location ID on an existing line item if it is not specified in the sheet and is run as a result of a web configurator

BatchProcessing.dll

6.4.35	11/03/2017	11710104	The system will now perform validation on sales orders prior to generating work orders to ensure work orders are not generated for on hold sales orders.
--------	------------	----------	--

ClientReports.dll

6.4.65	11/06/2017	11709051	Custom reports setup using the report destination details data can now be printed when the print destination type is selected.
		11710153	When running Item BOM reports, the BOM description of child items will now be used before their Item Master description. If the BOM description is not set, the Item Master description will be used instead.

Config.dll

6.4.154	11/03/2017	11710082	Redirected system to use a more up-to-date RoundUp function.
		11710073	Compilation parameters added to grant more granular customization abilities to Comments sections throughout Order Stream.
		11508132	Modified to allow launching config for first time configuration of a saved order line. The save button is immediately enabled and the user is not prompted for price changes until after the first save.
6.4.155	11/07/2017	11711054	An adjustment has been made to ensure the system is gathering item to master record count correctly.

Seradex OrderStream

Technical Release Notes

October 2017

CreditNote.dll

6.4.108 11/03/2017 11709162 Added the Routing field to the detail spread.

CRM.dll

6.4.117 11/03/2017 11710146 Generating an Opportunity from a Lead will no longer be dependent on the selection of a contact.

DataTransfer.exe

6.4.33 10/27/2017 11710186 Allow for certain core data such as search and profile nodes to be deleted without the need for a sql script on data transfer

DataTransfer.mdb

6.4.207 10/19/2017 11705068 A new field, Expected Arrival Date, has been added to the ItemsTransfer table.
11707108 Added DivisionID to the Facilities table.
Division Facility link data has been modified to be compatible with the new data model and the DivisionFacility table has been removed.
Removed the DivisionFacilities node from the sxSystem database.
11708004 If the ContactLog table is missing either CustomerID or ProspectID, they will be added.
11710088 Modify EDIGroups table to allow supporting a carriage return for the segment delimiter.

6.4.208 10/27/2017 11710186 Corrected issue with custom profile nodes for AppBox not being preserved upon data transfer
11610083 Creates a new table named AdditionalEmailAddresses that stores additional email addresses for the records in a module. This is currently only supported by Contacts.

6.4.209 11/03/2017 11703032 Corrected duplication line issue on the Receiving Search when receiving details are bound to sales orders.
11705068 The Item Running Balance report query has been modified to report on Inventory Transfers.

Estimating.dll

6.4.141 11/03/2017 11709142 Inactive/ On Hold ship tos will now load into the combo if they are set as the ship to for the current estimate.
A red label stating the order is inactive/on hold will appear under the address
If the user switches to an active order, the inactive/on hold order will be removed from the selection list.
Fixed an issue where estimate will ask to recalculate prices multiple times when changing addresses.

11710073 Compilation parameters added to grant more granular customization abilities to Comments sections throughout Order Stream.

11705289 Performed internal code maintenance and restructuring.

11705013 Estimate now have the ability to append new detail lines from other source.

Seradex OrderStream

Technical Release Notes

October 2017

6.4.141	11/03/2017	I1709162	Moved the Routing column to the right of the Revision column.
EventAlert.dll			
6.4.30	11/03/2017	I1709118	Updated the "Invalid Interval" message for non-hourly interval types.
ExcelBOMImport.exe			
6.4.10	11/07/2017	I1710094	Cost variables are now rounded on import instead of being converted to integers.
		I1710161	Fields which could be doubles will no longer round, and importing the BOM will no longer fail if not rebuilding.
InventoryTransfer.dll			
6.4.78	10/19/2017	I1710105	The column list between the Inventory Transfer grid and the query that loads the grid from the Mass Transfer sheet has been synchronized.
		I1705068	Added Expected Arrival Date to the Transport Information tab.
6.4.79	11/03/2017	I1710176	Row numbers in the Inventory Transfer spread will now match the row number in the validation message on approval.
Invoice.dll			
6.4.128	11/03/2017	I1709162	Locked the Routing field
		I1707137	Invoice lines can now be reordered within the invoice spread.
		I1708113	Corrected the grammar of a validation message
		I1707196	Altered document storage to show related documents for Shipping and Invoice details
		I1709142	Inactive/ On Hold ship tos will now load into the combo if they are set as the ship to for the current estimate. A red label stating the order is inactive/on hold will appear under the address If the user switches to an active order, the inactive/on hold order will be removed from the selection list.
		I1709122	Validation has been added to the item number column of the invoice details grid.
ItemEditor.dll			
6.4.115	11/03/2017	I1710073	Compilation parameters added to grant more granular customization abilities to Comments sections throughout Order Stream.
		I1707196	Altered document storage to show related documents for Shipping and Invoice details
6.4.116	11/06/2017	I1711048	Enhanced the multi document storage form to show estimate as a source.

MatReq.dll

Seradex OrderStream

Technical Release Notes

October 2017

6.4.112	11/03/2017	I1710196	Forecasting MRP will no longer display a message when returning to MatReq after processing items.
		I1702204	Based on an application preference, the vendor price list can now be used to determine the unit cost and discount when generating material requisition.

Receiving.dll

6.4.115	11/03/2017	I1709119	When generating a receipt from a purchase order, either through the form or generating it externally, the Item's Rack and Bin will only be used if the determined receipt location is the Item's master Location.
		I1703117	Blank records created in the Transactions spread for Service Order will now be updated instead of ignored by Receiving documents which are linked to the RMA.

RptDataCollection.dll

6.4.60	11/03/2017	I1706087	The work order pick list report has been updated to prevent the right side border from being cut off.
--------	------------	----------	---

RptInventory.dll

6.4.51	11/06/2017	I1710153	When running Item BOM reports, the BOM description of child items will now be used before their Item Master description. If the BOM description is not set, the Item Master description will be used instead.
		I1705068	The Item Running Balance report has been modified to display Inventory Transfer quantities whose status is In-Transit.

SalesOrder.dll

6.4.177	11/03/2017	I1702204	Based on an application preference, the vendor price list can now be used to determine the unit cost and discount when generating material requisition.
		I1701220	Modified to adjust the function that generate the lot/serial numbers to take into account the quantity already completed. Note that these changes are applicable only to clients using the new work order lot/serial functionality.
		I1705313	Added functionality to test detail dates for valid date formats, and provide a warning if they were invalid.
		I1709162	Set the Routing field in the spread to be visible
		I1705013	Corrected a logic flaw that could cause infinite looping.
		I1710073	Compilation parameters added to grant more granular customization abilities to Comments sections throughout Order Stream.
		I1709142	Inactive/ On Hold ship tos will now load into the combo if they are set as the ship to for the current estimate. A red label stating the order is inactive/on hold will appear under the address If the user switches to an active order, the inactive/on hold order will be removed from the selection list.
6.4.178	11/08/2017	I1711052	Resolved an issue where the default Workflow would not be set after pressing Add from an approved Sales Order.

Seradex.AppBox.exe

6.4.4 11/03/2017 11709116 General improvements to Appbox connection logic.

Seradex.ComComponents.dll

6.4.38 11/03/2017 11709150 Opportunities can now be launched from search.

Seradex.CommonServices.dll

6.4.39 11/03/2017 11707047 The web address detection in search has been updated to more accurately find valid web addresses.

Seradex.Excel.dll

6.4.15 11/03/2017 11508132 Modified to support calling the DynamicExcel class via an interface. This will allow using any other class e.g. Seradex.Aspose if it implements the same interface.

Seradex.Exchange2013.CRMMailRetrievalAgent.dll

6.4.6 11/03/2017 11610083 Modified to support the new ability of having multiple email addresses for a contact.

Seradex.Exchange2016.CRMMailRetrievalAgent.dll

6.4.6 11/03/2017 11610083 Modified to support the new ability of having multiple email addresses for a contact.

Seradex.Financials.FinancialsSystem.dll

6.4.89 11/06/2017 11709178 Corrected issue voiding a write off/apply credit transaction that had at least one invoice written off then voiding the subsequent void transaction then voiding the result.
11710123 Corrected issue with a foreign currency customer deposit where the exchange/gain or loss entry would be less than or equal to 2 cents

Seradex.Infragistics.dll

6.4.23 11/03/2017 11710177 When there are no visible rows in a grid, the system will now skip row resize analysis.

Seradex.Search.dll

6.4.69 11/03/2017 11708182 Corrected spelling for date filter.
11709150 Opportunities can now be launched from search.

Seradex OrderStream

Technical Release Notes

October 2017

Seradex.Utilities.AvawareSystem.dll

6.4.2 11/03/2017 I1705013 New functionalities have been added to the Avaware Import system.

Seradex.Utilities.ImportAdapterInterface.dll

6.4.17 11/03/2017 I1710090 Minor UI correction

Seradex.Utilities.OrderImport.dll

6.4.16 11/03/2017 I1508132 Modified to support setting a custom SpecStatus and preventing running autoconfig on new configured lines.

Seradex.Win.AppboxThemeConfigurator.dll

6.4.1 11/03/2017 I1710012 The Theme Selector has been modified to filter out profile nodes and groups that are disabled for the profile. It will also filter out the sxDashboard nodes and group, as they are not relevant to Appbox. An issue where the Theme Selector and Configurator could throw an error on Save has been resolved.

Seradex.Win.AppboxThemeSelector.dll

6.4.1 11/03/2017 I1710012 The Theme Selector has been modified to filter out profile nodes and groups that are disabled for the profile. It will also filter out the sxDashboard nodes and group, as they are not relevant to Appbox. An issue where the Theme Selector and Configurator could throw an error on Save has been resolved.

Seradex.Win.AvawareImport.dll

6.4.1 11/03/2017 I1705013 New functionalities have been added to the Avaware Import system.

Seradex.Win.Configurator.dll

6.4.3 11/03/2017 I1710035 When building combinations for the Batch Configurator, the system will now correctly apply boolean product line properties across all server configurations.

Seradex.Win.Financials.dll

6.4.86 11/03/2017 I1710070 Corrected issue whereby Manual cheques (non AR/AP) that were printed and not reconciled and in an open fiscal period were still editable.

Seradex.Win.Purchasing.dll

Seradex OrderStream

Technical Release Notes

October 2017

6.4.12	10/19/2017	11707108	Modified to use the new data model for Divisions and Facilities.
Seradex.Win.Search.dll			
6.4.60	11/03/2017	11709150	Opportunities can now be launched from search.
ServiceOrder.dll			
6.4.64	11/03/2017	11703117	The Transaction Type combo will now correctly display both "Receiving" and "Credit Note" when the Transaction Class combo value of "RMA" is selected.
Shipping.dll			
6.4.121	11/03/2017	11709162	Added the Routing field to the detail spread.
		11707196	Altered document storage to show related documents for Shipping and Invoice details
		11710144	When generating multiple shipments from an external project, the newly generated ShippingDetailID's will be gathered in a valid manner.
sxEDIBridge.dll			
6.4.39	11/03/2017	11508132	Modified to support setting a custom SpecStatus and preventing running autoconfig on new configured lines.
		11611142	New functionality has been added to support custom manual configure batch process.
sxMaintenance.dll			
6.4.117	10/19/2017	11710037	Facility information can only be modified in the Facility Maintenance form if Add is clicked or an existing facility is selected.
		11707108	Added a Division combo to the Facilities maintenance form.
6.4.118	11/03/2017	11610083	Now supports storing additional email addresses against a Contact. The Email suggestion interface has change to ensure it is not confused with the multiple email address functionality
6.4.119	11/08/2017	11711043	The newly added buttons on Contact Maintenance have now been changed to use 256 colour images instead of full colour ones. This is because older Windows Operating systems cannot load those images in Contact Maintenance which raised an error that blocked it from being opened.
sxMaintenanceControls.ocx			
6.4.11	11/03/2017	11702204	An application preference has been added to use the vendor price list to calculate unit cost and discount when generating material requisition from sales order, work order and MPR.

sxPhysical.dll

6.4.33	11/06/2017	11709139	Corrected the code (which was broken by recent versions of Windows) that returned the cursor to the "Scan Tag No" field and selected its contents.
sxProfile.dll			
6.4.19	11/03/2017	11709110	The sxSystem database setup form has been modified to prevent saving multiple default Database codes, and to default to the text of 'sxRuntime' if blank. Note that the database code 'sxRuntime' behaves identically to a blank code. They allow opening orderstream without specifying an argument in the .exe shortcut.
		11710012	The main profile editor form's 'Icons' label and text field have been removed. This functionality has been moved to the Appbox Theme Selector form. On the Edit Appbox Profile Nodes form, the 'Icon Path' label has been changed to 'Icon', and a button has been added to the right of the text box to open a dialog and select the icon image. An issue where node names, group names, commands, and icon path names could be too long and crash orderstream has been resolved. This form has received general readability and useability improvements.
sxRuntime.mdb			
6.4.43	10/19/2017	11707108	Removed the DivisionFacilities profile node.
Tooling.dll			
6.4.23	11/03/2017	11706065	The tooling form will no longer display an error message when trying to load a tool with no rack or bin information saved.
WorkOrder.dll			
6.4.151	11/03/2017	11709162	Added the Routing field to the detail spread.
		11710104	Sales orders that are on hold will no longer appear for selection in the sales order drop down.
		11701220	Modified to adjust the function that generate the lot/serial numbers to take into account the quantity already completed. Also made sure that the Work Order serial combo on the Completion interface can store the same number of serials loaded to the grid. Note that these changes are applicable only to clients using the new work order lot/serial functionality.
		11710163	Modified to ensure that the work order completion process for serial tracked finished goods when the serial numbers are generated during completion properly writes the quantity completed per serial in the work order completion audit trail.
		11710139	An adjustment has been made to work order completion ensuring that the system is using the Inventory Items rounding unit when attempting to gather line quantity already transferred.
		11702204	Based on an application preference, the vendor price list can now be used to determine the unit cost and discount when generating material requisition.

Seradex OrderStream

Technical Release Notes

October 2017

6.4.152 11/08/2017 I1701220

Modified to improve the speed of the query that loads the work order completion in batch mode for clients using the new lot/serial functionality for finished goods.
