Technical Release Notes

March 2021

ClientReports.dll

6.4.89	03/26/2021	I1808094	For multi reports, if any cannot print due to no data, show a prompt at the end of all the reports being printed as to which reports did not have records.
		I2012041	Telerik reports can now be printed directly from the report SDD.
		I2102251	Custom Item Running Balance reports now support using an SDDialog.
		I2103053	Post dialog actions that require item specs to be gathered are now supported from the report's SDD.

CreditNote.dll

6.4.131	04/09/2021	I2011192	If a tracked asset is received from a customer and is already disposed we will prompt the user to ask what to do.
		I1901301	In multi-company setups from search, when launching transactions in different runtime environments, the database connection will now be reset to prevent displaying a transaction from the incorrect company.

Database Setup Wave 0.xls

6.4.2	03/26/2021	I2101064	Modifications were made to some of the workbook sheets.
-------	------------	----------	---

Database Setup Wave 0.xlsm

6.4.3	03/26/2021	I2101064	Modifications were made to some of the workbook sheets.
-------	------------	----------	---

Database Setup Wave 1.xls

6.4.2	03/26/2021	I2101064	Modifications were made to some of the workbook sheets.
-------	------------	----------	---

Database Setup Wave 1.xlsm

6.4.3	03/26/2021	I2101064	Modifications were made to some of the workbook sheets.
-------	------------	----------	---

DataTransfer.mdb

6.4.278	04/09/2021	I2012261	Corrected Spelling of Purchase order form in the search module setup
		I2011192	Add Tracked Asset Reason Code
		I2011154	The TransLogTemp table has been added to store temporary transaction logs.
		I2011195	Add DueDate and ShipTo fields to AppIntegrationDetails. Add ShipTo fields to EstimateDetails.
		I1902023	Integrity checks have been added to detect active contacts linked to inactive accounts, as well as active accounts with only inactive contacts. Synchronizing can now set contacts to active or inactive based on the accounts they are linked to.
		I1907051	Removed "Not Used" from the Rule Operator arrow ToolTip in the Earnings Code lookup.

Technical Release Notes

March 2021

6.4.278	04/09/2021	I2103070	Add integrity check to find existing PODetails without locations so they may be corrected
		I2103077	Modified the query sorting for core reports: Vendor Return Log, Transfer Log Report, Receiving Log, PO Log, Receiving Log with PO, PO Log With WO, Shipping Log.
		I2102266	The Usage History report query was modified to account for the possibility of multiple receipts per purchase order line.
		I2103203	Added integrity check to look for recurring transactions that are overdue
		I2103204	Add tmpFreeMSInventory, tmpJobControlProgressTotals, tmpJobControlProgressTracking, tmpSOWOMSNeeds, tmpWOsProducingMSItems, OpenPODetails to the list of temporary tables cleaned up by the Admin Tools > Setup Autoupdater > Database Cleanup > Temp Tables utility.
		I2103232	Added an integrity check to discover any non-inventory-updated adjustments with details where the UOM is NULL.
Estimating.dll			
6.4.182	04/09/2021	I1901301	In multi-company setups from search, when launching transactions in different runtime environments, the database connection will now be reset to prevent displaying a transaction from the incorrect company.
		I2011195	Added ShipVia, ShipTerm, CustomerShipTo and ShipToComment to the list of used data columns.
ExcelBOMImport.dll			
6.4.9	04/09/2021	I2012262	Adjusted the logic ensuring that the import system doesn't replace ampersand character to a plus character for importing items' user-defined.
Infragistics4.Web.v13.1.dll			
6.4.1	03/26/2021	I1709202	Alterations made to the WebSFE framework to further align with LAN code and functionality.
IntegrityCheck.dll			
6.4.22	04/09/2021	I2103029	The validation for custom Integrity Check queries was altered to eliminate this type of false-positive invalid query detection.
Invoice.dll			
6.4.175	04/09/2021	I1901301	In multi-company setups from search, when launching transactions in different runtime environments, the database connection will now be reset to prevent displaying a transaction from the incorrect company.
		I2011192	Added support for direct invoicing without shipment of tracked assets, this will write the log as invoice and still handle the customer update if needed.

Technical Release Notes

March 2021

ItemEditor.dll

6.4.150 04/09/2021 I2103081 Modified the logic which determines if there are user-defined fields to be displayed after the item has been copied, preventing an exception from being thrown if the UDF module is not enabled.

POInvoice.dll

6.4.119 04/09/2021 I1901301 In multi-company setups from search, when launching transactions in different runtime environments, the database connection will now be reset to prevent displaying a transaction from the incorrect company.

PurchaseOrder.dll

6.4.133 04/09/2021 I1901301 In multi-company setups from search, when launching transactions in different runtime environments, the database connection will now be reset to prevent displaying a transaction from the incorrect company.

Receiving.dll

6.4.153 04/09/2021 I1901301 In multi-company setups from search, when launching transactions in different runtime environments, the database connection will now be reset to prevent displaying a transaction from the incorrect company.
I2011192 If a tracked asset is received from a customer and is already disposed we will prompt the user to ask what to do. Also in the lot serial screen let users pick a tracked asset number which will default the serial number if it is matched.

ReleaseManager.exe

6.4.142 04/06/2021 I2102322 New Merge date added. Also updates the Forecasted Release date of unreleased tickets that are completed or have the date set. If the ticket is completed and the completed date is prior to the old merge date, the Forecasted Release date is set to the new Release Date, otherwise the Forecasted Release date is set to the expected Release Date based on the next merge date as specified.
I2102229 Modified to add a "Build Priority" column to assist in building files in the correct order. Also now compares the type library IDL information for specific files to detect changes and warn about them.

SalesOrder.dll

6.4.225 04/09/2021 I2103199 Ensure unit costs are copied when copying an order and if new specs are updated to ensure the cost reflects the new spec.
I1901301 In multi-company setups from search, when launching transactions in different runtime environments, the database connection will now be reset to prevent displaying a transaction from the incorrect company.

Seradex OrderStream

Technical Release Notes

March 2021

Seradex.BaseSystem.dll

6.4.51 04/09/2021 I2012168 Modified to define the necessary objects to be able to call custom events from the main Estimating user interface.

Seradex.EstimateSystem.dll

6.4.17 04/09/2021 I2101289 EmployeeID now reflects copying/revising user when creating a copy or revision
I2011195 Added ShipVia, ShipTerm, CustomerShipTo and ShipToComment to the list of used data columns.

Seradex.Infragistics.dll

6.4.49 04/09/2021 I2103170 A comparison to replace a control name with its value was corrected.
I2103412 Added a function to override the combo layout colour.
I2103431 Adjusted the logic to allow column sorting with the new .Net grid.

Seradex.Production.DataCollection.dll

6.4.55 03/26/2021 I2007253 Supporting changes for web shop floor.

Seradex.Purchasing.dll

6.4.28 04/09/2021 I1901085 The purchasing form will now display a tool tip when the total weight cannot be calculated due to a missing UOM conversion.

Seradex.ReportSystem.dll

6.4.17 03/26/2021 I1808094 Added support for custom reports to read the NoRecordMessage field which allows users to override the message displayed.
I2012041 The ability to set document detail reprint fields has been added for Telerik reports.

Seradex.SalesOrderSystem.dll

6.4.25 04/09/2021 I2011195 Add ShipToComment to the list of used data columns.

Seradex.Utilities.IntegrationMgrSystem.dll

6.4.18 04/09/2021 I2011195 Add the ability to import Order information as part of the Excel style order import.
I2011045 Ensure the newest version of the SWOOD import file is translated correctly into the SQL temp table.
I2102148 Corrected an issue where updating transaction order does not use the right transaction rounding unit.

Technical Release Notes

March 2021

Seradex.Web.ShopFloorExecution.dll

6.4.1	03/26/2021	I2007253	Added Work Order Comment, Userdefineds 1 -> 4 as available columns in the Web Shop Floor grid. Currently the Headers/captions for Userdefined1 > 4 can be customized upon deployment, if they need to be changed post-deployment, Seradex must make the change.
		I2009263	Fixed an issue with Web Shop Floor where cells with single attachments were not able to load the attachment.
		I2008084	Added support for using the ASPNet logins that is used by Dbox for Web SFE
		I1711236	Modified how data was delivered to ensure presence on initial load.
		I1709202	Alterations made to the WebSFE framework to further align with LAN code and functionality.

Seradex.Win.AppboxThemeConfigurator.dll

6.4.5	04/09/2021	I2102094	Add Service Order Module to the Module theme Configurator list so it can have a custom theme applied
-------	------------	----------	--

Seradex.Win.Controls.dll

6.4.25	04/09/2021	I2012019	Allow the ShipTo maintenance form to be view when the transactions are approved.
		I1901085	A weight UOM drop down box has been added to the transaction totals control for the purchase order form.
		I2103408	Ensure the Communications toolbar document info gathering event is bound to its parent form.

Seradex.Win.Estimate.dll

6.4.31	04/09/2021	I2103408	Ensure compatibility with the corrected Communications toolbar document info gathering event.
		I2103412	Adjusted the logic to decrease the system memory usage.
		I2102227	Estimate and Sales Order will now prompt the user to update the prices on customer change if the application preference to forbid this is not set, rather than only when the price list is changed.
		I2103090	Prospects will now have their address information populate the BillTo grid.
		I2103258	The Item No combo will now contain all Sell items, though it will filter out Discontinued items from the list.
		I2002203	Change Sales Order and Estimate Inactive BOM dialog boxes to use gridmessage boxes so they can display any amount of values
		I2012019	Allow the ShipTo maintenance form to be view when the transactions are approved.
		I2011195	Modified the App Integration menu loading to allow dynamically created menus with custom captions.
		I2101289	EmployeeID now reflects copying/revising user when creating a copy or revision

Seradex OrderStream

Technical Release Notes

March 2021

6.4.31	04/09/2021	I2102002	Item detail lines will now allow the user to entered a negative value for the discount percentage. Pre-existing grid settings will need to be reset/recreated for this functionality to work as intended.
		I2012168	Modified to add the ability to call custom events from the main Estimating user interface.

Seradex.Win.IntegrationManager.dll

6.4.10	04/09/2021	I2011195	Ensure no import conflicts will occur when using both the Excel and SQL style imports.
--------	------------	----------	--

Seradex.Win.InventoryAdditionalInfo.dll

6.4.4	04/09/2021	I2011192	Allow logic to reopen a disposed tracked asset if dictated to do so on receive from customer or credit note.
-------	------------	----------	--

Seradex.Win.Invoice.dll

6.4.43	04/09/2021	I2102153	The SalesOrderNo and JobNo combos will be locked against user interference for deposit invoices.
		I2102302	Adjusted the loading of the form logic ensuring that the system will load the grid combos correctly.
		I2103432	Adjusted the logic ensuring that the user interface is not active until the data are finished loading on form load.
			Adjusted the logic to decrease the system memory usage.
		I2103408	Ensure compatibility with the corrected Communications toolbar document info gathering event.

Seradex.Win.NonConformanceManager.dll

6.4.28	04/09/2021	I2009210	The due date field on the Non-Conformance form is now hidden.
--------	------------	----------	---

Seradex.Win.Purchasing.dll

6.4.51	04/09/2021	I1901085	A weight UOM drop down box has been added next to the total weight field.
		I2103408	Ensure compatibility with the corrected Communications toolbar document info gathering event.
		I2103412	Adjusted the logic to decrease the system memory usage.
		I2103107	The vendor's default contact will be selected when a manual PO is created. If no contact exists, the combo will be cleared.
		I2103070	Add validation to prevent details lines without locations from being saved

Seradex.Win.Receiving.dll

6.4.45	04/09/2021	I2011192	Corrected issue where viewing the detail allocation form in Receiving was loading it as editable for approved receipts.
--------	------------	----------	---

Seradex OrderStream

Technical Release Notes

March 2021

Seradex.Win.Reports.dll

6.4.19	03/26/2021	I2012041	Support for Telerik multi-report has been added.
		I1808094	For multi reports, if any report cannot print due to no data, show a prompt at the end of all the reports being printed as to which reports did not have records.

Seradex.Win.SalesOrder.dll

6.4.35	04/09/2021	I2002203	Change Sales Order and Estimate Inactive BOM dialog boxes to use gridmessage boxes so they can display any amount of values
		I2012019	Allow the ShipTo maintenance form to be view when the transactions are approved.
		I2011195	Modified the App Integration menu loading to allow dynamically created menus with custom captions.
		I2102002	Item detail lines will now allow the user to entered a negative value for the discount percentage. Pre-existing grid settings will need to be reset/recreated for this functionality to work as intended.
		I2102227	Estimate and Sales Order will now prompt the user to update the prices on customer change if the application preference to forbid this is not set, rather than only when the price list is changed.
		I2103412	Adjusted the logic to decrease the system memory usage.
		I2103408	Ensure compatibility with the corrected Communications toolbar document info gathering event.
		I2103258	The Item No combo will now contain all Sell items, though it will filter out Discontinued items from the list.

Seradex.Win.Shipping.dll

6.4.31	04/09/2021	I2103412	Adjusted the logic to decrease the system memory usage.
--------	------------	----------	---

Seradex.Win.Telerik.dll

6.4.22	03/26/2021	I2012041	Processing of printer dialogs has been migrated to Seradex.Win.Reports.dll
		I1808094	Added support for custom reports to read the NoRecordMessage field which allows users to override the message displayed.
		I2006284	Eliminated a harmless issue in the Gantt chart where clicking in the grid on the left side when the Gantt had no horizontal scroll bar could have displayed the error "Value of -1 is not valid ...".

Seradex.Win.WorkOrder.dll

6.4.26	04/09/2021	I2011142	The ItemNo grid combo will now, instead of filtering out discontinued items, include them but hide them so that they cannot be selected, while still allowing ItemNo values from existing work orders to be displayed.
		I2002203	Change Work Order Inactive BOM dialog boxes to use gridmessage boxes so they can display any amount of values
		I2103412	Adjusted the logic to decrease the system memory usage.

Seradex OrderStream

Technical Release Notes

March 2021

6.4.26	04/09/2021	I2103442	Ensure that locking and unlocking of the Module UDF control in the Work Order form is based off of the underlying work order Approved property value instead of the Approve button on the UI.
		I2102292	Have Work Order Reschedule tab populate a single row when loading form/when another row is filled in. Does not save empty rows.
ServiceOrder.dll			
6.4.74	04/09/2021	I1901301	In multi-company setups from search, when launching transactions in different runtime environments, the database connection will now be reset to prevent displaying a transaction from the incorrect company.
Shipping.dll			
6.4.166	04/09/2021	I1901301	In multi-company setups from search, when launching transactions in different runtime environments, the database connection will now be reset to prevent displaying a transaction from the incorrect company.
		I1805006	Inventory allocated using the "Auto allocate non-stock Lot/Serial from Sales Order to Shipping" preference will now be returned to the sales order when the shipping header or detail is deleted.
		I2102034	Modified to ensure that when saving after deleting lines on the Shipping .NET user interface and having the application preference "Auto allocate non-stock Lot/Serial from Sales Order to Shipping" enabled an error is not produced.
sxPhysical.dll			
6.4.36	03/26/2021	I2102010	The physical inventory tag form has been updated to apply the inventory module's number of decimal places.
sxWorkflow.ocx			
6.4.31	04/01/2021	I2103462	The workflow control will no longer overwrite its details' due dates when its parent form is loading.
		I2103467	AssignedBy combo will now populate with the usual list of employees.
TemplateImportQueries.mdb			
6.4.2	03/26/2021	I2101064	Modification were made to some of the import data queries based on the modification made on the corresponding workbook sheets from Wave 0 and 1.
WebSFE BinShare.zip			
6.4.1	03/26/2021	I1709202	Alterations made to the WebSFE framework to further align with LAN code and functionality.

Seradex OrderStream

Technical Release Notes

March 2021

WebSFE Pages.zip

6.4.1	03/26/2021	I1709202	Alterations made to the WebSFE framework to further align with LAN code and functionality.
		I2012203	Web SFE will now respect the Allow Multiple Users to start Data Collection for the Same Operation preference. An issue with Web Shop Floor not recognizing that the Scheduling Module was activated has also been resolved.
		I2012124	Web Shop Floor will now open attachments in a new tab if possible. When there are multiple attachments for a cell the Multi-attachments window will also open in a new tab leaving the Main Grid untouched.

WebSFE UI.zip

6.4.1	03/26/2021	I1709202	Alterations made to the WebSFE framework to further align with LAN code and functionality.
-------	------------	----------	--

WorkOrder.dll

6.4.202	04/09/2021	I1901301	In multi-company setups from search, when launching transactions in different runtime environments, the database connection will now be reset to prevent displaying a transaction from the incorrect company.
		I2101150	Adjusted the system to save the Earliest Material Availability override value for the non-consolidated work order.
		I2102085	The fields (which were formatted in a recent update) have now been aliased in the report query, so that they will be picked up by the report.
		I2102118	Modified to ask the user whether or not to automatically update the associated sub work orders due dates when modifying the "Earliest Material Availability" field on a parent work order.
