

Seradex OrderStream

Technical Release Notes

September 2021

ActiveM20.dll

6.4.141	10/15/2021	I2103228	The query to gather the Item Running Balance details will show the VendorReturn EntryDate value instead of the PO DueDate when the QtyReceived is less than zero.
		I2104403	Transfer now uses pseudo allocations for inventory allocated to Sales Order. Note that inventory assigned to a unprocessed shipment or invoice can no longer be transferred. Also, inventory assigned to a unprocessed transfer cannot be shipped (or auto shipped via direct invoicing).
		I2107128	Adjusted the PostDialogAction - BuilditemRunningBalanceData ensuring that the consignment inventory quantity is updating correctly when running inventory reports with multiple items filtering.
		I2108137	Modified the criteria used to determine which receipts can be unapproved.
		I2006081	When the Include Make-Stock Subassembly Component Demand for Sales Order preference is on, the sales order line location's facility will now correctly be identified during processing.
		I2104229	When Multi-Facility or Multi-Division is activated, and the current employee record does not have a related Location, the Item Running Balance form will default the All Locations checkbox to checked.
		I2109240	Modified to ensure that the temp tables created to acquire full struc data are created as SQL temp tables and are dropped at the end of the process.

AutoProcessor.exe

6.4.6	09/13/2021	I2005129	Use [SPACE] instead of [SEMICOLON] as the separator in auto processor command line arguments. Example: sxRuntime -1 0 0
		I2005130	Corrected issue to properly pass a flag to the configurator to enable transaction detail updating, like pricing and descriptions

ClientReports.dll

6.4.92	10/20/2021	I2101272	Modified the query populating ##SpecBomReportStrucTemp to include UserDefinedx fields.
		I2108115	Modified to now report on any errors in the email SQL setup in ReportDestinationDetails. Can now handle more differences in syntax for the email SQL setup in ReportDestinationDetails.
		I2109030	Parameters passed from the report dialog to Telerik reports are now supported.

Config.dll

6.4.191	09/13/2021	I2108284	Ensured that the configure is gathering and using the excel revision out field correctly when creating and updating the existing item.
		I2108156	Corrected the configure excel sheet customer nowhere it's not populating the correct field when using prospects.
		I2108039	Adjusted the ItemSpecs Prop saving function, where the system will now ignore properties that are gap or group line.
		I2005132	Corrected Config to update existing error in ErrorLog instead of always creating new ones

Seradex OrderStream

Technical Release Notes

September 2021

6.4.191	09/13/2021	I2005131	Corrected config to update the ErrorLog if one exists for the same owner instead of always creating new ones
		I2105220	Corrected an issue in configurator setup to properly enable the menu option setup Excel Defaults.
6.4.192	10/18/2021	I2107013	When updating a mastered item, the Category specified in the workbook will be updated correctly as well as any ItemMasterUserDefined data based on it.
		I2109182	With the application preference "Show Item Exists Dialog when Mastering Items" enabled, the excel product line input sheet "Use System PropText" is not enabled and there is a valid Item No in the excel product line output sheet, the new force spec flag will be automatically set to true if it's not, to begin with.
		I2108182	The query loading the next line's data will fetch the ItemID from the related ItemSpecs record, rather than the module-specific detail record (which may be NULL).

DataTransfer.mdb

6.4.283	10/15/2021	I2109277	Altered GL Reporting function to also calculate Prior YTD as well as showing the total income amounts against each income statement GL for ease of revenue comparison.
		I2108205	Added a Description column to EmailSetup.
		I2004070	Increase EDI Group SQL field size to the maximum SQL string length.
		I2103223	Modified to add a new table for the App Integration Manager named: AppIntegrationModuleSetup to store the fields for which the user desires to preserve their values when overwriting an order line with the imported one.
		I2107018	Added a new data integrity check "DC - Open secondary worker records against completed primary worker". Adjusted the data integrity check "SecondaryWorker Record Without Related and Correct PrimaryWorker Record" SQL statement ensuring that the query is gathering the data collection records correctly.
		I2101098	Ensure that pre-existing Document Storage records for .Net Service Order will be loaded correctly.
		I2106042	Added .Net Work Order Make-Stock MRP core search. Added WOMakeStockMRP module.
		I2102134	Added a new search queries for the new functionality of moving sales order lines to another sales order.
		I2104328	Added translations for "Link Estimate to Opportunity" and "Create New Estimate From Opportunity"
		I2106216	New Data Model for GLReportGroups and table function to return financial data by fiscal year and period
		I2009291	A print columns has been added to the scheduling details form.
6.4.284	10/18/2021	I2109255	Break the foreign key constraint for the TransLogTemp table.

DBox Web Front End Components (WFE)

6.4.30	10/15/2021	I2104328	Added the ability to link and unlink Estimates to an Opportunity from the Opportunity management page.
		I2105198	Location added as a field on the sell-items page, as well as the functionality to filter by location.

Seradex OrderStream

Technical Release Notes

September 2021

DC2001.dll

6.4.61	10/15/2021	I2104230	Modified to add the job name to the Job Number combo of the data collection grid as the second column.
		I2107018	Added a function to update secondary workers' data collection records when their associated primary worker is completed with a finished time.
6.4.62	10/20/2021	I2110191	Corrected the datatype of a new method's parameter to allow it to accommodate larger values.

Estimating.dll

6.4.187	10/15/2021	I2109085	Added functionality to support/respect the sales order additional charges method option.
		I2107177	Added the ability to set the SuppressMessages flag from .Net creation.

EventAlert.dll

6.4.33	10/15/2021	I2108205	Modified EmailSetup to include a label denoting the purpose of the Sender Account Name field and a Description field.
--------	------------	----------	---

EventAlert.exe

6.4.18	10/15/2021	I2101054	The error email sent when the address or cc address is invalid has been updated to make the column headers better align with the details.
--------	------------	----------	---

InventoryAdjustment.dll

6.4.101	10/15/2021	I2108221	The logic for whether or not to use the new rack/bin value has been corrected.
		I2012209	Users can no longer enter lot or serial numbers that exceed the maximum 50 character limit.
		I2105215	Modified to add the inventory owner information when creating the Excel Physical Count sheet.

InventoryTransfer.dll

6.4.106	10/15/2021	I2104403	Transfer now uses pseudo allocations for inventory allocated to Sales Order. Note that inventory assigned to a unprocessed shipment or invoice can no longer be transferred. Also, inventory assigned to a unprocessed transfer cannot be shipped (or auto shipped via direct invoicing).
		I2108096	Made a small correction to the rack/bin validation logic.
		I2108221	The logic for whether or not to use the new rack/bin value has been corrected.

Invoice.dll

Seradex OrderStream

Technical Release Notes

September 2021

6.4.178	10/15/2021	I2106126	Modified to ensure that when auto-assigning inventory from sales order to an invoice it updates any existing records if necessary instead of incorrectly creating duplicate records.
		I2109180	Corrected issue unapproving Job Billing related invoices
		I2109319	Corrected the issue where the .NET Invoice is not appending drop shipment items when creating an invoice from a sales order.
MatReq.dll			
6.4.144	10/15/2021	I2101216	The Sales Order combo on the Mat Req form will now load sales orders based on records in the MatReqItems table.
		I2109240	Modified to ensure that the temp tables created to acquire full struc data are created as SQL temp tables and are dropped at the end of the process.
		I2006081	When the Include Make-Stock Subassembly Component Demand for Sales Order preference is on, the sales order line location's facility will now correctly be identified during processing.
		I2103163	When gathering consignment inventory for MRP, the MaterialLocation flag will no longer be used to filter locations.
		I2101089	Users can now navigate selective material requisition by entering a line number in the Line No text field.
MicrovellumImport.dll			
6.4.32	10/15/2021	I2009226	Modified to provide additional info when selecting a Microvellum file in case an error occurs.
POInvoice.dll			
6.4.121	10/15/2021	I2106334	Added logic to prevent users from invoicing the same PO twice if two users both load a PO to invoice and press save at the same time, also added logic on approval to ensure that does not occur and also prevented approval of duplicate commission invoices.
		I2106115	Added further validation on approval to detect when the Vendor Invoice is marked as approved in the database, to fail if the record does not exist.
		I2108161	Vendor invoice can no longer be launched from purchase order when purchase order was launched from vendor invoice.
6.4.122	10/18/2021	I2110147	Corrected the issue where the document storage user interface was missing from the form.
Receiving.dll			
6.4.156	10/15/2021	I2103478	Adjusted the updating of the sales order status on drop shipment generation ensuring that the system is grouping the drop shipment items correctly.

ReleaseManager.exe

Seradex OrderStream

Technical Release Notes

September 2021

6.4.144 09/22/2021 I2109178 Eliminated an error when a regular testing user (not a Development Lead) uses the right click-menu to assign themselves as a tester to an issue. Using the button does not cause this error.

I2109024 Enhanced Forecast Due Date functionality with recording of current Merge Date and next upcoming merge date.

Return to Developer now has a default Note and requires one. It also marks the response as ReturnedToDeveloper for improved tracking.

Release Notes for uncompleted tickets that have no Forecast Due Date and not marked as "In Release Branch" are now displayed on the "Future Release" tab.

RptDataCollection.dll

6.4.77 10/15/2021 I2009291 Core product data collection reports can now be sent directly to the printer.

SalesOrder.dll

6.4.229 10/15/2021 I2108134 Adjusted the logic ensuring that the description field on the newly added shipment detail line will be populated when appending new lines to the latest shipment on sales order save.

I2102134 Modified to make a function visible to the .NET Sales Order module.

I2104228 If an accepted rfq detail exists, the accepted vendor will now appear on selective material requisition instead of the default vendor.

I2107177 Added the ability to set the SuppressMessages flag from .Net creation.

I2101216 When generating Mat Req through Sales Order using the Selective Mat Req form, the related work order lines will also be marked as MatReq generated.

I2109240 Modified to ensure that the temp tables created to acquire full struc data are created as SQL temp tables and are dropped at the end of the process.

Schedule.dll

6.4.23 10/15/2021 I2009071 Modified to provide additional information when encountering the rare "Must close or hide topmost modal form first" error. Modified that screen to use the improved functionality that displays it in the task bar.

Seradex.Accounting.QuickBooksLink.dll

6.4.1 10/15/2021 I2011107 Updated logic to work with the new login and security requirements from Intuit

Seradex.BaseSystem.dll

6.4.53 10/15/2021 I2106211 Altered to support use from RestApi where there will not be any seradex installation nor the use of Com objects

I2107177 Add extension method to facilitate easier string handling.

I2106371 Altered Financials system related to deposits and banking to reduce database calls and pass in the connection as opposed to relying on the global connection.

Seradex OrderStream

Technical Release Notes

September 2021

Seradex.CommonServices.dll

6.4.68	10/15/2021	I2109102	Add the ability to suppress message boxes for Web or non-interactive processes.
		I2106211	Altered to support use from RestApi where there will not be any seradex installation nor the use of Com objects
		I2106042	Added logic to support .Net Work Order Make-Stock MRP.

Seradex.Connection.dll

6.4.47	10/15/2021	I2107177	Added the ability to prevent displaying of message boxes when called from Web or non-interactive processes.
--------	------------	----------	---

Seradex.Dbox.dll

6.4.31	10/15/2021	I2105198	Added the ability to filter items by location.
		I2107225	Added an optional field to bypass certain additional security checks when getting data for the Config that we already know you should have access to.
		I2108273	Fixed an issue where sometimes when calculating pricing in a situation where a UOM Conversion was necessary that the UOM Conversions would fail to be loaded, causing a null reference.
		I2107177	DBOX and the RestAPI can now import Quotes/Orders/BOM/Labour using the .NET App Integration Module.
		I2108071	Corrected a coding issue where attempting to configure a Dbox item with customer config defaults throws an exception.
		I2108131	Added database objects to work with the new Seradex Mobile app. Expanded existing API calls to work with new functionalities.
		I2104328	Added the ability to gather a list of Estimates that can be linked to the provided Opportunity.
		I2107214	Fixed an issue where values with a decimal would not load back into the configurator when editing a configuration in DBOX.

Seradex.Dbox.QuickBooks.dll

6.4.7	10/15/2021	I2106170	Altered sync tool to ensure credit notes are included in the AR balance update.
-------	------------	----------	---

Seradex.Email.dll

6.4.11	09/13/2021	I2005127	Added support for configuration error emailing in .net configurator.
--------	------------	----------	--

Seradex.EstimateSystem.dll

6.4.21	10/15/2021	I2107177	Add the ability to bypass Excel functionality for Web usage.
		I2109085	Added functionality to support/respect the sales order additional charges method option.

Seradex OrderStream

Technical Release Notes

September 2021

Seradex.Financials.FinancialsSystem.dll

6.4.120	10/15/2021	I2105292	Altered deposit and AR payment logic to ensure the bank transaction is only affected when deposits are saved.
		I2109117	Corrected issue if the default GL account cannot be determined from either the existing authorities for a state or the non nexus Group's authority when a new tax group needs to be created.
		I2106371	Altered Financials system related to deposits and banking to reduce database calls and pass in the connection as opposed to relying on the global connection.
6.4.121	10/18/2021	I2110155	Corrected issue applying credits as part of the payment process.

Seradex.Infragistics.dll

6.4.53	10/15/2021	I2109102	Add the ability to suppress message boxes for Web or non-interactive processes.
		I2109179	Adjusted the logic that display the grid layout incorrectly.
		I2101099	Modified the calculation of the theme's dark colour internal property.
		I2106282	.Net transactional form grids will now display the Windows default right-click menu(Cut, Copy, Paste, etc.) when the grid cell is in EditMode.

Seradex.Inventory.dll

6.4.34	09/13/2021	I2107320	More rounding was added to the comparison to determine whether or not a transfer is required, which will eliminate more precision-related unnecessary transfers.
		I2102169	Fixed issue that reverted the Update Details flag, causing line items pricing and descriptions not being updated. Corrected an issue that ignores configuration error emailing when the Error Batch Count parameter is absent and the number of email count is less than the default of 5.

Seradex.InvoiceSystem.dll

6.4.23	10/15/2021	I2109319	Corrected the issue where the .NET Invoice is not appending drop shipment items when creating an invoice from a sales order.
--------	------------	----------	--

Seradex.Library.dll

6.4.22	10/15/2021	I2107177	Add fields to synchronize the AppIntegration data objects with their related ActiveM tables.
--------	------------	----------	--

Seradex.MasterApi.dll

6.4.8	10/15/2021	I2108047	Removed the final use of our FTP site from the MasterAPI that was used to load the Telerik Reports to be deployed to Amazon, the code will now simply access the local folder on the Web server.
-------	------------	----------	--

Seradex OrderStream

Technical Release Notes

September 2021

Seradex.OrderEntry.dll

6.4.17	09/13/2021	I2102169	Fixed issue that reverted the Update Details flag, causing line items pricing and descriptions not being updated. Corrected an issue that ignores configuration error emailing when the Error Batch Count parameter is absent and the number of email count is less than the default of 5.
6.4.18	10/15/2021	I2105211 I2109102	Removed unused incompatible method from OrderDataAccess. Add the ability to suppress message boxes for Web or non-interactive processes.

Seradex.OrderEntryLibrary.dll

6.4.23	10/15/2021	I2107177	Improve error handling for Web usage. Add the ability to bypass Excel functionality for Web usage.
--------	------------	----------	--

Seradex.ProductConfigurator.dll

6.4.7	09/13/2021	I2005132	Once a line that has an existing error log is successfully processed, the error log is now removed from the error logs table.
		I2005127	Error messages emailed from .Net Configurator are formatted as : An error occurred in Net.Config Module: [Module Name] Order: [Order Number] Line No: [Line Number] Item No: [Item Number] Error Description: [Function Name]: - [Error description]
		I2102169	Fixed issue that reverted the Update Details flag, causing line items pricing and descriptions not being updated. Corrected an issue that ignores configuration error emailing when the Error Batch Count parameter is absent and the number of email count is less than the default of 5.
		I2005131	Email multiple errors in one log instead of a single email per error. Use default batch count as 5 unless new parameter, EmailBatchCount, is specified.
		I2005130	Email multiple errors in one log instead of a single email per error. Use default batch count as 5 unless new parameter, EmailBatchCount, is specified. Updates error log to not create new ones when the owner is the same, regardless of source.
6.4.8	10/15/2021	I2108280	Corrected issue where the dynamic disabling was not working correctly when there are more than one product line on the grid.

Seradex.Production.DataCollection.dll

6.4.58	10/15/2021	I2108242	When no SerialNo column, check to see if it exists before attempting to check value (fixes DC not stopping or completing on stop clicked)
		I2106211	Altered to support use from RestApi where there will not be any seradex installation nor the use of Com objects

Seradex OrderStream

Technical Release Notes

September 2021

Seradex.Production.dll

6.4.8 10/15/2021 I2106211 Altered to support use from RestApi where there will not be any seradex installation nor the use of Com objects

Seradex.Production.WorkOrder.dll

6.4.33 10/15/2021 I2106042 Added logic to support .Net Work Order Make-Stock MRP.

Seradex.Purchasing.dll

6.4.31 10/15/2021 I2108161 The purchase order form can no longer be launched from the receiving form when receiving is launched from a purchase order.

Seradex.Purchasing.ReceivingSystem.dll

6.4.29 10/15/2021 I2108076 Adjusted the logic ensuring that if the UOM received will not display the ID in the cell if the system cannot find the UOM in the combo selection.
I2103478 Adjusted the generation logic ensuring that when generating a transaction from a selected purchase order, the system will exclude items that are marked as drop shipment item.

Seradex.RestApi.dll

6.4.26 10/15/2021 I2107177 DBOX and the RestAPI can now import Quotes/Orders/BOM/Labour using the .NET App Integration Module.
I2105198 Added the ability to filter items by location.
I2108131 Added database objects to work with the new Seradex Mobile app. Expanded existing API calls to work with new functionalities.
I2104328 Updated the Create and Update Opportunity functions in DBOX to be able to link/unlink Estimates from the Opportunity.

Seradex.SalesOrderSystem.dll

6.4.29 10/15/2021 I2102134 Modified to add the necessary logic to support the new functionality of moving sales order lines to another sales order.
I2107177 Add the ability to bypass Excel functionality for Web usage.

Seradex.Search.dll

6.4.84 10/15/2021 I2106042 Added logic to support .Net Work Order Make-Stock MRP.

Seradex.SpecBuilder.dll

6.4.3 10/15/2021 I2107177 Improved usability from the .Net modules.

Seradex OrderStream

Technical Release Notes

September 2021

6.4.3 10/15/2021 I2105211

Upgraded to the latest version of SpecBuilder.

Seradex.Strings.dll

6.4.44 10/15/2021 I1911258
I2106042
I2109102
I2109085

Added the ShipmentPackaging module activation call.
Added logic to support .Net Work Order Make-Stock MRP.
Add the ability to suppress message boxes for Web or non-interactive processes.
Added the BatchProcessor moduleID.

Seradex.UserDefined.dll

6.4.10 10/15/2021 I2107075

Newly-created documents will now exist in the correct state to allow saving defaulted UDF values. The query populating UDF combos will also now filter properties by module, so any properties appearing in more than one module will no longer duplicate values.

Seradex.Utilities.IntegrationMgrSystem.dll

6.4.21 10/15/2021 I2103223
I2102057
I2105211
I2107177

Modified to add the necessary objects to support the new functionality of overwriting the BOM of specified order lines with the Microvellum imported lines.
Modified to add the necessary objects to implement the Microvellum import via the Integration Manager module.
Modified to use the new SpecBuilder.Net (Seradex.SpecBuilder.dll).
Clean up the data objects and fields to improve readability. Improve error handling.

Seradex.Utilities.NonConformanceManagerSystem.d

6.4.28 10/20/2021 I2110196

The NCR form will now save correctly.

Seradex.Utilities.Packaging.dll

6.4.0 10/15/2021 I1911258

Added functionalities to support the new packaging form.

Seradex.Win.BatchProcessor.dll

6.4.19 10/15/2021 I2109085

Added functionality to support/respect the sales order additional charges method option.

Seradex.Win.Controls.dll

6.4.29 10/15/2021 I2109102
I2102027

Add the ability to suppress message boxes for Web or non-interactive processes.
Ensure the ShipTo combo is populated even if the Ship To UI frame is hidden.

Seradex OrderStream

Technical Release Notes

September 2021

6.4.29 10/15/2021 I2101099 Modified the back colour of the disabled Approved button to ensure it can be read in all themes.

Seradex.Win.Estimate.dll

6.4.37 10/15/2021 I2106281 The Shift + Insert key ability to add a new line at a specific row has been added.
I2109085 Added functionality to support/respect the sales order additional charges method option.
I2110023 Corrected the issue where the price list is not populating when selecting a customer without a default ship to.

Seradex.Win.Financials.dll

6.4.119 10/15/2021 I2106371 Altered Financials system related to deposits and banking to reduce database calls and pass in the connection as opposed to relying on the global connection.
I2105292 Altered deposit and AR payment logic to ensure the bank transaction is only affected when deposits are saved.
I2107142 Corrected issue where voiding payments used to pay AP invoices and reissuing a replacement allowed the new payment to be edited and ensured the combo reloaded with the new transaction. Added feedback to the void process to make it clear what occurred.
I2109101 Prevent users from making a voided payment or AR based payment as recurring.

Seradex.Win.IntegrationManager.dll

6.4.12 10/15/2021 I2103223 Modified to add two new fields to the Microvellum import grid to implement the ability of specifying which OrderStream transaction line from the source document (Estimate or SalesOrder) the user wants to overwrite with the imported line while at the same time being able to preserve certain values from the original line. Note that the fields to preserve the values are specified in a new table: AppIntegrationModuleSetup.
I2107177 Add an order import API to facilitate imports from Web.
I2102057 Modified to add the necessary objects to implement the Microvellum import via the Integration Manager module.

Seradex.Win.InventoryCosting.dll

6.4.7 10/15/2021 I2106378 SubWO labour will now display correctly in the Inventory Cost Tracker form.
I2009205 Modified to exclude allocation records from the data reported for work orders

Seradex.Win.InventoryTransfer.dll

6.4.25 10/15/2021 I2104403 Transfer Generator now notes that users cannot move inventory that is assigned to a shipment or invoice from a sales order allocation.

Seradex OrderStream

Technical Release Notes

September 2021

Seradex.Win.MaintenanceTools.dll

6.4.10 10/15/2021 I2109102 Add the ability to suppress message boxes for Web or non-interactive processes.

Seradex.Win.Packaging.dll

6.4.6 10/15/2021 I1911258 Added a new packaging form.

Seradex.Win.Purchasing.dll

6.4.56 10/15/2021 I2103142 Implement a loading logic ensuring that the purchase order form is disabled to prevent user interaction during the gathering of data on form load.
I2108161 The purchase order form can no longer be launched from the receiving form when receiving is launched from a purchase order.
I2104104 Adjusted the loading of selected items ensuring that the purchase items is loading the correct uom conversion correctly upon the first load for quantity to buy.

Seradex.Win.QuickConfigurator.dll

6.4.31 10/15/2021 I2108280 Corrected issue where the dynamic disabling was not working correctly when there are more than one product line on the grid.

Seradex.Win.Receiving.dll

6.4.49 10/15/2021 I2108161 The receiving form can no longer be launched from the purchase order form when purchasing is launched from receiving.
I2002007 Added a call to SecuredControls to ensure core locking/unlocking does not interfere with custom Security.
I2108076 Adjusted the logic ensuring that if the UOM received will not display the ID in the cell if the system cannot find the UOM in the combo selection.

Seradex.Win.SalesOrder.dll

6.4.42 10/15/2021 I2106281 The Shift + Insert key ability to add a new line at a specific row has been added.
I2102134 Modified to add a new user interface for the new functionality of moving sales order lines to another sales order.
I2110023 Corrected the issue where the price list is not populating when selecting a customer without a default ship to.

Seradex.Win.Scheduling.dll

Seradex OrderStream

Technical Release Notes

September 2021

6.4.47 10/15/2021 I2009291

A Print column has been added to the details grid. Selecting the Print check box, right clicking, and choosing the Print or Preview menu option will launch the work order report.

Seradex.Win.Scheduling.Finite.dll

6.4.28 10/15/2021 I2009291

A Print column has been added to the details grid. Selecting the Print check box, right clicking, and choosing the Print or Preview menu option will launch the work order report.

Seradex.Win.Search.dll

6.4.92 10/15/2021 I2107121

Remove Ctrl+C close shortcut from all search forms

I2103390

Auto-sizing menus have been added to the Search Grid context menu.

I2106042

Added logic to support .Net Work Order Make-Stock MRP.

6.4.93 10/19/2021 I2110171

Corrected an issue where the override where clause is not clearing out which in turn caused an error when launching module searches.

I2110175

Corrected an issue where the override where clause is not clearing out which in turn caused an error when launching module searches.

Seradex.Win.ServiceOrder.dll

6.4.9 10/15/2021 I2101099

Added a prompt to the click of the Approve button. Ensure grids can still be accessed when approved. Add Details buttons will now be hidden when form is Read Only. Corrected tab order of controls. The display text of the Issue Category cell will now be the category description instead of the code.

I2101098

Ensure that Document Storage data will load and save correctly against Service Orders.

Seradex.Win.Shipping.dll

6.4.36 10/15/2021 I2002007

Added a call to SecuredControls to ensure core locking/unlocking does not interfere with custom Security. The right-click menu can now be secured using Advanced Security.

I1911258

Added the "Append To Packaging" tools menu when the module activation "ShipmentPackaging" is enabled.

Seradex.Win.ShopFloorExecution.dll

6.4.54 10/15/2021 I2108242

When no SerialNo column, check to see if it exists before attempting to check value (fixes DC not stopping or completing on stop clicked)

6.4.55 10/19/2021 I2110178

Updated logic ensuring that the SFE is respecting the ByPassStart option for barcode completion.

Seradex.Win.WorkOrder.dll

6.4.31 10/15/2021 I2106042

Added .Net Work Order Make-Stock MRP.

Technical Release Notes

September 2021

6.4.31	10/15/2021	I2012165	When closing the WO Completion form in batch mode, the system will no longer attempt to reload an empty work order document.
6.4.32	10/19/2021	I2110171	Adjusted the logic ensuring that when moving the qty to make column position, the system is not locking the column from being able to edit.
Shipping.dll			
6.4.167	10/15/2021	I2106126	Modified to ensure that when auto-assigning inventory from sales order to a shipment it updates any existing records if necessary instead of incorrectly creating duplicate records.
		I2105231	When using Advanced Security on grids with File Attachment functionality, the single file attachment dialog will be displayed as expected.
sxMaintenance.dll			
6.4.143	10/15/2021	I2104227	Modified to include the Work Order in the list of modules that can be launched from the generic message form.
sxPhysical.dll			
6.4.37	10/15/2021	I2107237	Adjusted the refresh quantity on hand logic ensuring that the system is using the inventory adjustment round unit.
UpdateAcct.dll			
6.4.75	10/15/2021	I2104185	Added support for Sage vendor updates to read the Active Flag in the vendor master.
WOGenerator.dll			
6.4.41	10/15/2021	I2104227	Modified to be able to launch the Work Order module from the "WO Generation Results" screen by double-clicking on the Work Order number.
		I2108207	Modified to not prompt to reconfigure Microvellum and Inventor product lines if the quantity is changed.
WorkOrder.dll			
6.4.207	10/15/2021	I2109240	Modified to ensure that the temp tables created to acquire full struc data are created as SQL temp tables and are dropped at the end of the process.
		I2101216	When generating Mat Req through Work Order using the Selective Mat Req form, the related sales order lines will also be marked as MatReq generated.
		I2106042	Added logic to support .Net Work Order Make-Stock MRP.
		I2104228	If an accepted rfq detail exists, the accepted vendor will now appear on selective material requisition instead of the default vendor.
		I2009071	Modified the main Work Order screen to use the improved functionality that displays it in the task bar.
